Ensuring the energy performance of your installations, wherever it is critical

When **energy** matters

SYD/1514

For more than a century, Socomec, a family-owned industrial group, has been designing, manufacturing and selling a wide range of electrical equipment such as: inverters, measuring stations, energy storage, switches, automatic source switches, and more.
With a strong expertise in critical power applications, Socomec is an innovative player in energy transition and renewable energy.

Throughout its history, Socomec has constantly anticipated market changes by developing cutting-edge technologies, providing solutions that are adapted to customer requirements and fully in keeping with international standards. Expert in electrical networks and installations performance, Socomec improves the energy efficiency of electrical installations wherever it is critical: industry, infrastructure, healthcare, data center, energy and C&I buildings. With 12 production sites, 30 subsidiaries, products and services distributed in 80 countries by more than 100 distributors, Socomec accompanies you for a more secure, flexible and efficient energy.

100 years
OF SHARED ENERGY

1
independent
manufacturer

3,500 m²
of test platforms

One of the leading independent power testing labs in Europe

8 %

Always at the cutting-edge of technology for innovative, high quality products

110,000
on-site interventions per year

Nearly 400 experts in commissioning, technical audit, consultancy and maintenance

Your energy, our expertise

Power switching

Managing power and protecting people, equipment and installations

Active in the industrial switching market since its foundation in 1922, Socomec is today an undisputed leader in the field of low voltage switchgear, providing expert solutions that ensure:

- isolation and on load breaking for the most demanding switching applications
- continuity of the power supply to electrical facilities via manual remotely operated or automatic transfer switching equipment
- protection of persons and assets via fusebased and other specialist solutions

Power monitoring

Improving energy performance and monitoring installations

Socomec solutions - from current sensors to power meters and from IOT to energy management software - are driven by experts in energy performance. They meet the requirements of facility managers and operators of commercial, industrial and critical buildings to enable and facilitate:

- the measurement of energy consumption, the identification of sources of excess consumption and the generation of awareness amongst occupants as to their impact
- the utilisation of the best available tariffs, utility bill checks and the accurate distribution of energy billing between consumer entities
- the limitation of reactive energy and avoidance of associated tariff penalties
- capacity management and the evolution of the electrical installation
- improvements to power availability by monitoring and detecting insulation faults

Power conversion

Ensuring the availability and storage of high quality power

With its wide range of continuously evolving products, solutions and services, Socomec are recognised experts in the cutting-edge technologies used for ensuring the highest availability of the electrical power supply to critical facilities and buildings, including:

- static uninterruptible power supplies (UPS) for high-quality power free of distortions and interruptions occurring on the primary power supply
- changeover of static, high availability sources for transferring the supply to an operational back-up source
- permanent monitoring of the electrical facilities to prevent failures and reduce operating losses
- energy storage for ensuring the proper energy mix of buildings and for stabilisation of the power grid

Energy storage

High power and scalable outdoor systems

An all-in-one range of outdoor Energy Storage Systems available in various sizes and features for on-grid and off-grid applications:

- modular energy storage system (ESS) can decouple energy production from consumption to better meet consumption needs
- harness the potential of renewable energy to charge batteries
- become more efficient in terms of UPS battery monitoring and maintenance to integrate these intermittent sources into the power grid

Your partner in expert services

Socomec is committed to delivering a wide range of value-added services to ensure the reliability and optimisation of end-users' equipment during its life cycle

- Prevention and service operations to reduce risk and enhance equipment efficiency.
- Measurement and analysis of a wide range of electrical parameters leading to recommendations for power quality improvement.
- Consultancy, deployment and training from the project engineering stage to the final procurement stage.

Specialists - at your service

Our Services team comprises qualified engineers whose mission is to ensure the correct operation of your equipment. We offer a comprehensive support service package which gives you complete peace of mind: commissioning, on-site testing, preventive maintenance visits, 24-hour call out and rapid on-site repairs, original spare parts, power quality and energy efficiency audits, consultancy, design and implementation of installation modifications and updates.

Our Services team is the most reliable partner when it comes to advising you on the maintenance of Socomec equipment and providing resolution to any problems in accordance with current environmental standards and procedures.

Professional tools

Our Services team is provided with the latest essential equipment including:

- Personal Protective Equipment (protective goggles, helmet, insulated gloves, fireproof jacket, safety shoes, earplugs...)
- laptop embedded with all software required to optimize equipment performance
- measuring equipment calibrated annually by our metrology department (multimeter, digital scope, current clamps, infra-red camera, power analyzer)

Reports

An exhaustive report is generated for each intervention (including commissioning, preventive maintenance and troubleshooting) which is then automatically sent to the customer and synchronized with our systems.

Remote diagnostics

In case of any anomaly, an automatic notification is sent to a local call center for proactive online troubleshooting.

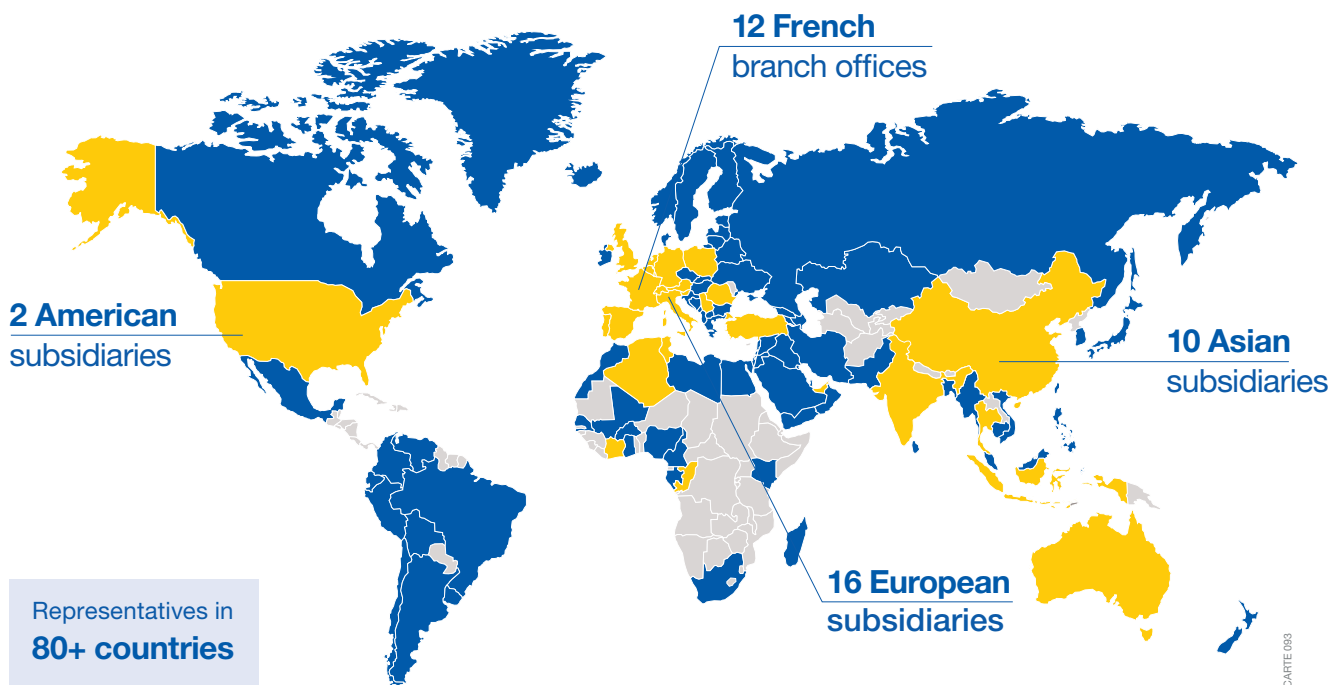

Availability of original spare parts

The various original parts and components that we stock guarantee that any faulty equipment can be rapidly brought back online, whilst maintaining its original performance and reliability.

Key figures

Nearly 400 Socomec experts - supported by 200 engineers and technicians from across our distributor network - can provide the solutions to your specific needs.

A cutting-edge laboratory the backing of an expert

Created in 1965, SOCOMEC's laboratory brings its expertise to guarantee the reliability and the conformity of our products and solutions.

Since 2015, the laboratory renamed Tesla Lab – Power Testing and Certification in 2015, offers its testing and certification services to all its customers.

Proven expertise

Tesla Lab is an independent laboratory specialised in testing of LV switchgear, components and switchgear assemblies. 4 M€ has been invested since 2011 in this 2000 m² laboratory, where 30 experts guarantee the quality of the performed tests, making the Tesla Lab one of the most modern laboratories in Europe.

Vast range of tests

The laboratory has a 100 MVA (I_{cc} 100 kA rms 1 s) short-circuit platforms, three 10 kA overload platforms and many other test facilities covering 2000 m² for:

- functional tests
- mechanical tests: endurance
- dielectric tests
- environmental tests: vibration
- Ingress Protection (IP)
- temperature rise tests up to 60 °C ambient

International partnership

The laboratory is recognised by the major certification bodies worldwide: member of ASEFA and LOVAG, it is accredited by COFRAC, UL CTD, CSA (shared certification) and DEKRA (WMT).

The partnership with many international certification bodies guarantees the quality and safety requirements in each country.

Implementation of standard IEC / EN 61439

Electrical switchgear manufacturers

IEC/EN 61439 standards define the requirements of "Low voltage switchgear assemblies" as well as the tests necessary to ensure the achievement of the specified levels of performance. The compliance with these standards gives a guarantee of safety and performance to the user of the equipment

An original manufacturer according to IEC /

EN 61439 standards

Socomec offers a wide range of original manufacturer solutions complying with IEC/EN 61439 standards:

- FLEXYs and CADRYs cabinet systems designed for distribution panel applications.
- Local switching and equipment cabinets covering requirements in power availability and safety.
- Components for integration

Tesla Lab accredited by COFRAC

With its world-class testing facilities, the Tesla Lab can perform all of the tests required by IEC/EN 61439 standards for switchgear assemblies.

We can therefore help you to:

- define a verification program
- perform conformity tests
- issue test reports in order to get certification bodies (ASEFA, LOVAG, DEKAR, UL, CSA, COFRAC, ASTA...).

Expert in power conversion

maximizing power quality and availability

Socomec at the forefront of innovation

Proven expertise

Socomec's products are designed and developed by our talented team of in-house engineers with their real depth and wide knowledge in power electronics and digital controls. Our expertise in manufacturing - combined with the use of only the highest quality components in the most efficient production and testing processes – means that when it comes to reliability our products are unrivaled.

Socomec factories join the digital world

Since 2014, Socomec has been investing to bring its manufacturing facilities in line with industry 4.0 standards. Beyond lean manufacturing, the digitalization of production means that we can ensure the delivery of a competitive offering with continuously improving service levels whilst also supporting the creation of more personalised products.

Factory Acceptance Test (FAT)

The FAT service is available to all customers who want to audit their order before it leaves the factory. With the support of Socomec Platform Engineers and dedicated infrastructure, several live product tests are available, including:

- standard tests to verify product performance
- custom tests according to your precise requirements.

ELITE UPS: a mark of efficiency

Socomec, as CEMEP UPS manufacturer member, has signed a Code of Conduct put forward by the Joint Research Centre of the European Commission (JRC), to ensure the protection of critical applications and processes ensuring 24/7 continuous high quality supply.

The JRC commits to mitigating energy losses and gas emissions caused by UPS equipment, therefore maximizing UPS efficiency.

3 levels of UPS protection to keep your business up and running

PRIME

Trustworthy power

Reliable and cost effective UPS to assure operational continuity.

SUPERIOR

Unrivaled power performance

Best in class & certified UPS performance to optimize usage and Total Cost of Ownership (TCO).

ULTIMATE

Fault tolerant power without compromise

Ultimate UPS with fully redundant architecture for maximum availability, minimum MTTR and risk free maintenance.

Selection guide

Non-fusible disconnect switches

UL/CSA standards for disconnect switches

UL 98 - Enclosed and dead front switches (equivalent to CSA-C22.2 no 4)

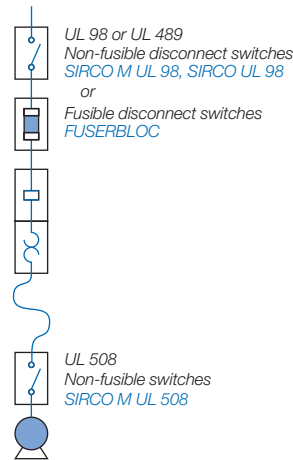

These requirements cover enclosed or dead front switches doesn't need to be capitalized, with or without provision for fuses, at 600 V or less.

These products are used as disconnecting means without restrictions; they are heavy duty products requiring 2 inches (50 mm) minimum of creepage distance, which gives a maximum safety for users and installation. The short circuit withstand of these products goes up to 200 kA.

UL 489 - Molded case switches (equivalent to CSA-C22.2 no 5)

These requirements cover Molded-case Circuit Breaker, Molded case switches and fused Molded-case switches, rated at 600 volts or less and 6 000 amperes or less.

Typical control panel

sirco-ul_022_b_1_dat

sircom_174_a

UL standards for electrical machinery

UL 508 - Industrial Control Equipment (equivalent to CSA-C22.2 no 14)

These requirements cover manual, starter, controllers, and overload don't need to be capitalized.

These products are IEC type products, requiring only a creepage distance between phases of 1/2 inch. UL 508 standard requested only 5 kA or 10 kA as short circuit withstand with fuse protection. Their use as a disconnecting mean is therefore limited to local disconnection of motors. These products can only be used as a disconnect mean when they have been additionally tested "suitable as motor disconnect". This additional testing ensures that the switch as a proper closing capacity on short circuit. UL 508 (switches or Circuit breakers) can not be used as main disconnect of a electrical panel. (i.e. in entrance of control panels).

A manual motor controller marked "Suitable as motor disconnect" shall be installed only on the load side of the branch circuit protective device (UL 508A 30.3.3 and NEC 430.109(6)).

from 16 to 100 A

Rotary switch
SIRCO M2 3x80A

Toggle switch
SIRCO M2 3x80A + 2 auxiliary contacts

Rotary switch
SIRCO M2 3x80A

Function

SIRCO M UL/CSA are compact and modular non-fusible disconnect switches. They make and break under all types of load conditions and provide safe isolation for any low voltage circuit, especially for machine control circuits.

General characteristics

- Positive break indication.
- Direct or external operation.
- Compact footprint.
- DIN-rail, base or door mounting.
- Wide range of accessories.
- Up to 8 pole or 4 pole MTS.

The solution for

- > OEM/Machine Builders
- > Industrial Control Panel Manufacturers (UL 508A)
- > Switchboard Manufacturers (UL 891)

M00 handle

access_277_a_2_cat

External operation handle

Use

The handle locking function prevents the user from opening the door of the enclosure when the switch is in the "ON" position (only if the handle is fitted on the door).

No interlock in the "OFF" position for S00 and S0 handles.

Opening the door when the switch is in the "ON" position is possible by defeating the interlocking function with the use of a tool (authorized persons only). The interlocking function is restored when the door is closed. The handle is padlockable with 3 padlocks.

SIRCO M UL 508

Non-fusible disconnect switches standards UL and CSA
from 16 to 100 A

M type Auxiliary Contacts

Use

Pre-break and signaling of positions 0 and I by NO+NC or 2 NO Auxiliary Contacts.
They can be mounted on the left or on the right side of the device.

Max 4 Auxiliary Contacts per product (2 modules).

Characteristics

A300.

Rating (A)	No. of AC	AC type	Reference
16 ... 100 CD	1 AC	NO + NC	2299 0001
16 ... 100 CD	1 AC	2 NO	2299 0011

Auxiliary contacts configurations for SIRCO M

Conversion kit

Use

These accessories enable the assembly of 2 switches in order to achieve:

- 6 or 8 pole switches
- 3 or 4 pole open or close transition transfer switches.

Rating (A)	Type	Reference
16 ... 100 CD	Non-fusible disconnect switches 6/8 pole	2269 6009
16 ... 100 CD	Transfer switch 3/4 pole (I - 0 - II)	2209 6009
16 ... 100 CD	Transfer switch 3/4 pole (I - I+II - II)	2299 6009 ⁽¹⁾

(1) Not UL.

Conversion kit for 6 or 8 pole non-fusible disconnect switches

Conversion kit for 3 and 4-pole transfer switches (I - 0 - II) or (I - I+II - II)

Door mounting kit

Use

This kit enables direct mounting of the switch on the panel door or on the right or left side of the panel with S00 and S0 handles.

The S0 and S00 external handles are quick and easy to install due to an internal locking nut mounted on the inside of the enclosure.

Rating (A)	No. of poles	Reference
16 ... 100 CD	3/4 P	2299 3409

Not compatible with S01 handle.
No need of external shaft.

SIRCO M UL 98

Non-fusible disconnect switches standards UL and CSA
from 30 to 100 A

Rotary switch
SIRCO M 3 x 100 A

Function

SIRCO M UL 98 are compact non-fusible disconnect switches that make and break under on and off load conditions and provide safe isolation.

These switches are extremely durable and are tested and approved for use in the most demanding applications.

General characteristics

- Positive break indication.
- Touch safe.
- DIN rail or back plate-mounted.
- Direct or external operation handle.

Specific characteristics

- Contact point technology.

References

Accessories

Direct operation handle

Rating (A)	Handle color	Handle type	Reference
30 ... 100	Blue	M01	2299 5032

accses_285_a_2_cat

M01 handle

External operation handle

Use

The handle locking function prevents the user from opening the door of the enclosure when the switch is in the "ON" position (only if the handle is fitted on the door).

No interlock in the "OFF" position for S0 handles.

Opening the door when the switch is in the "ON" position is possible by defeating the interlocking function with the use of a tool (authorized persons only). The interlocking function is restored when the door is closed. The handle is padlockable with 3 padlocks.

access_260_a_2_cat

Additional pole for SIRCO M

4th pole

Rating (A)	No. of poles	Type	Reference
30	1 P	switched	2201 1003
60	1 P	switched	2201 1006
100	1 P	switched	2200 1010

Use

Adding one or two additional poles transforms a non-fusible disconnect switch from 3 poles to 4 poles.

siem_072_b_1_cat

Solid neutral pole

Rating (A)	No. of poles	Type	Reference
30 ... 100	1 P	unswitched	2200 5011

Use

Transforms the 3-pole switch into a 3-pole + solid neutral.

siem_078_a_1_cat

Ground module

Rating (A)	No. of poles	Type	Reference
30 ... 100	1 P	unswitched	2200 9011

Use

Adds 1 ground module pole to the switch-disconnector.

Terminal shrouds

Use

Top and bottom additional protection against direct contact with the terminals or connection parts. 1 or 3 pole are available.

Perforation on each terminal cover enables remote thermographic inspection without dismantling.

SIRCO UL 98

Non-fusible switches standards UL and CSA
100 to 1200 A

SIRCO
3 x 600 A

SIRCO
3 x 200 A

Function

SIRCO non-fusible disconnect switches are heavy duty switches that break and make power circuits on and off load and provide safety isolation.

These switches are extremely durable and are tested and approved for use in the most demanding applications.

General characteristics

- Positive break indication.
- Fully visualized disconnection.
- High thermal and dynamic withstand.
- Severe utilization categories.
- High electrical and mechanical endurance.

UL 508A painted steel NEMA 3R, 12 enclosed SIRCO UL 98

Function

Enclosed SIRCO UL 98 allow safe disconnection of power sources.

General Characteristics

- Painted steel enclosure with red handle.
- Fitted with a heavy duty handle that has a metallic padlock hasp.
- Equipped with a 3 pole SIRCO UL 98 switch.
- Possibility of adding unswitched neutral pole auxiliary contacts, and terminal screens.
- Nema 3R, 12 up to 1200 A.

The solution for

- > OEM/Machine Builders
- > Industrial Control Panels Manufacturers (UL 508A)
- > Switchboard Manufacturers (UL 891)
- > AC Combiner Builders
- > Distributors

Strong points

- > Reliability
- > Safety of property and personnel
- > Simplicity
- > Easy assembling

Conformity to standards⁽¹⁾

- > UL 98, CSA-C22.2 No. 4, Guide WHTY, File E201138
- > CSA-C22.2 No. 4, Class 4651-02, File 112964
- > IEC 60947-3

Accessories (continued)

External operation handle

Use

The interlocking function of the front external handle prevents the user from opening the door of the enclosure when the switch is in the "ON" position or when the switch is padlocked in the "OFF" position.

Opening the door when the switch is in the "ON" position is possible by defeating the interlocking function with the use of a tool (authorized persons only). The interlocking function is restored when the door is closed.

Auxiliary contacts

Use

Pre-break and color of positions 0 and I.
To have 2 NO/NC contacts per switch, please order 1st and 2nd auxiliary contacts per switch.
1st contact is mandatory to operate the 2nd one.

Electrical characteristics

A300 for 100 to 400 A.

NO/NC contact for 100 to 1200 A

These auxiliary contacts are for an application of 125-250VAC, 60Hz, general use 10A, 1A 1/2 HP.

Rating (A)	No. of AC	Reference

SIRCO
3 x 400 A

Function

SIRCO non-fusible disconnect switches are heavy duty switches that break and make power circuits on and off load and provide safety isolation up to 800 VAC. These switches are extremely durable and are tested and approved for use in the most demanding applications.

General characteristics

- Positive break indication.
- Fully visualized disconnection.
- High thermal and dynamic withstand.
- Severe utilization categories.
- High electrical and mechanical endurance.

The solution for

- > AC Combiner Builders
- > String Inverter Manufacturers
- > Industrial Control Panels Manufacturers (UL 508A)
- > Switchboard Manufacturers (UL 891)
- > Distributors

Strong points

- > Up to 65 kA short circuit rating
- > Reliability
- > Safety of property and personnel
- > Simplicity
- > Easy assembling

Conformity to standards

- > UL 98C

Accessories (continued)

External operation handle

Use

The interlocking function of the front external handle prevents the user from opening the door of the enclosure when the switch is in the "ON" position or when the switch is padlocked in the "OFF" position.

Opening the door when the switch is in the "ON" position is possible by defeating the interlocking function with the use of a tool (authorized persons only). The interlocking function is restored when the door is closed.

Expert Services

Our experts are here for you to make your project a success.

A fully tested range for all your PV applications

Using tested and certified components is key for the success of the design for any photovoltaic system. The INOSYS LBS and SIRCO MOT / MAN range is tested and certified according to main standards used in the photovoltaic industry.

Global approvals

Our INOSYS LBS and SIRCO MOT / MAN solar disconnect range meets UL 98B, IEC 60947-3 Standards and bear the CE mark. Using the SOCOMEC range in your design is therefore a unique opportunity to standardize your components and use the same switches on 5 continents.

PV critical current

Under particular conditions PV systems can deliver a low current at high voltage. This type of current is extremely difficult to interrupt. Standard AC or DC products are usually not tested in these particular conditions and could therefore be unable to interrupt low currents at high DC voltage. If the electrical arc produced is not interrupted it may result in operator injury or fire. The INOSYS LBS and SIRCO MOT / MAN range has been specifically designed and tested to interrupt the current under all current/voltage conditions.

Current (I)/Voltage (V) curve of a PV system. When the current decreases (in the evening or when cloudy) the voltage may increase. SC = Short-circuit, OC = Open-circuit

Short Circuit

The complete UL 98B range is tested to withstand a short circuit of 10 kA for a duration of 50 ms without any specific protection. This allows the use of any overcurrent protection device for line protection.

Thermal current test

Thermal tests have been performed according to both IEC and UL standards.

sircopv 005 a

According to UL 98B standard, the maximum difference authorized between T1 (temperature of terminals) and T2 is 40 °K when the switch is fully loaded.

According to IEC 60947-3, switches are tested in free air. Maximum temperature elevation on terminals is 70 °K.

Our UL 98B switches are certified up to 60 °C AMBIENT without derating

The standards for PV disconnect switches

USA

- UL 98B; Disconnect switches for photovoltaic systems, usually for rating above 40 A.
- Manual disconnect switches for photovoltaic systems, usually for ratings up to 40 A.
- UL 1741; Inverters and interconnection system equipment.

Worldwide

- IEC 60947; Low-voltage switchgear and controlgear. Part 3; Switches, disconnectors, switch-disconnectors and fuse-combination units.

The 5th largest European power laboratory

Since 1965, the Pierre Siat test laboratory has used its expertise to guarantee the reliability and compliance of SOCOMEC products and solutions.

This totally independent laboratory is recognized by the major certification bodies worldwide: member of UL, CSA and KEMA. It also works in partnership with numerous international certification organizations (CEBEC, ASTA, Lloyd's, Bureau Véritas, GOST-R, etc.). The quality and safety requirements specific to each country are therefore fully taken into account.

With its 100 MVA (I_{dc} 100 kA rms 1 s) short-circuit platform, three 10 kA overload platforms and numerous other test instruments, in facilities covering 1500 m², the Pierre Siat laboratory is currently the 2nd largest French power

Function

SIRCO MC PV are DC non-fusible disconnect switches. They make and break under load conditions and provide optimum safe isolation for any PV circuit.

Advantages

Compact

Due to its compact design, the space needed within the combiner box or the solar inverter is greatly reduced.

High breaking capacity up to 1000 VDC

- Making and breaking capacity under load conditions up to 1000 VDC.
- Specific photovoltaic test beyond requirements of UL 508i and IEC 60947-3 standard.

Safety

- Bridging bars are factory fitted for easier, quicker and safer connection.
- Direct access to connection terminals for adequate tightening.

SIRCO MC PV
DIN-rail mounting

Multi-circuit switching

- The SIRCO MC PV for dual circuits (2 MPPT: Maximum Power Point Tracking) enables connection of two independent photovoltaic circuits to a single switch in order to reduce the costs of the global solution.

What you need to know

For grounded or ungrounded networks:

It is possible to use the SIRCO MC PV in both network systems, either switching one or both polarities.

(1) For grounded systems, single polarity switching, a bridge shall be added.
 For spare bridging bars, please consult us.

INOSYS *LBS* UL 98B

Load Break Switches for DC & PV applications
from 100 to 1200 A, up to 1500 VDC

Also
available up
to 2000kV

The solution for

- > Combiner box
- > Recombiner box
- > Solar Inverter

Strong points

- > High performance power switching in a compact frame
- > Safe & reliable operation
- > Designed for harsh environments
- > Easy to install
- > Modular solution for flexible configuration

Conformity to standards

- > UL 98B
Guide WHVA
File E346418

- > IEC 60947-3,
DC-21B & DC-PV2

- > CCC

Function

INOSYS LBS is a range of load break switches that can be manually controlled. These switches can be operated manually using the handle to disconnect all or part of the electrical installation. They ensure on-load opening / closing and safe disconnection of any direct current low voltage electrical circuit up to 1500 VDC. They can also be used for emergency power switching applications. They are available for DC-PV2 utilization category.

Advantages

High-performance switching in a compact frame

INOSYS LBS load break switches incorporate patented technology that provides a breaking capacity of 750 VDC per pole, providing 1500 VDC in just 2 poles, and significantly limiting power dissipation. All in an exceptionally compact device.

Safe & reliable operation

- Direct position indication on the bar and visible contact with containment of the electrical arc.
- The opening and closing of the switch is fully independent from the speed of operation, ensuring safe operation under all conditions.
- High temperature withstand: no derating up to 131° F (55 °C), functional from -40 to +122 °F (-40 to +50 °C).

Designed for harsh environments

- Vibration testing (from 13.2 to 100 Hz at 0.7 g).
- Shock testing (15 g during three cycles).
- Humid temperature testing (2 cycles, 131°F/55°C with 95% humidity level).
- Salt mist testing (3 cycles with humidity storage, 104°F/40°C, 93% humidity after each cycle).

Easy to install

- Wiring: as the switch is non-polarized all types of wiring and connections are possible.
- Easy access without tools to integrate auxiliary contacts (located within the switch footprint).
- Mechanism can be centred or left aligned (in the factory) to accommodate installation requirements.

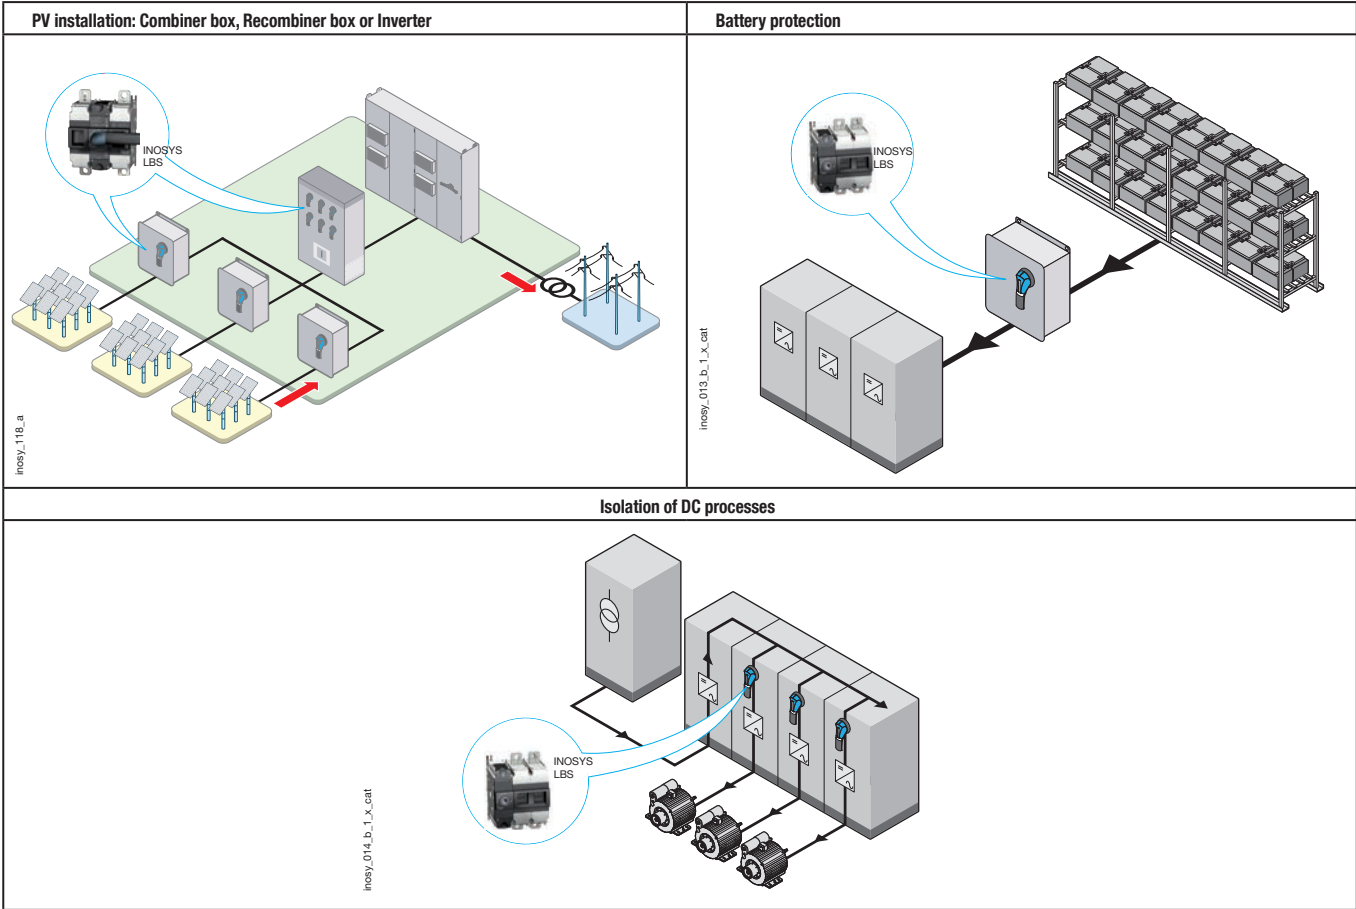

Modular solution for flexible configuration

- Single or dual polarity switching
- The same switch can be used for installation with either grounded or floating networks by choosing the wiring configuration.

General characteristics

- Range from 100A to 1200A.
- Up to 1500 VDC.
- High-performance switching in a compact design.
- Easy integration.
- Reinforced safety with visible contact indication.
- Efficient with low power-loss.

Typical applications: local safe disconnection for DC and PV applications

F2	E2	Red	8499 5023
F3	E3	Black	8499 5032

E3 handle

access_400_a_1_cat

Door interlocked external operation handle

Use

Door interlocked external operation handles include an escutcheon and are padlockable. External handles must be utilized with an extension shaft.

Example

As the handle is interlocked in the "ON" position the operator must safely disconnect and isolate the circuit prior to accessing the panel for maintenance procedures.

Opening the door when the switch is in the "ON" position can only be done by defeating the interlocking function with the use of a dedicated tool (authorized personnel only). The interlocking function is restored when the door is re-closed.

S2 type handle

INOSYS ESS

Load Break Switches for DC & ESS applications
from 800 to 1200 A, up to 1500 VDC

Function

INOSYS ESS LBS is a range of load break switches that can be manually controlled. These switches can be operated manually using the handle to disconnect all or part of the electrical installation. They ensure on-load opening / closing and safe disconnection of any direct current low voltage electrical circuit up to 1500 VDC. They can also be used for emergency power switching applications. They have been specifically designed to withstand high short circuit conditions in ESS applications.

Advantages

High short circuit withstand for DC and ESS applications

INOSYS ESS LBS load break switches have been specifically designed to withstand high short circuit conditions in ESS applications. Tested in both fused and nonfused applications to ensure maximum safety in all fault conditions.

High-performance power switching in a compact frame

INOSYS ESS LBS load break switches incorporate patented technology that provides a breaking capacity of 750 VDC per pole, providing 1500 VDC in just 2 poles, and significantly limiting power dissipation. All in an exceptionally compact device.

Safe & reliable operation

- Direct position indication on the bar and visible contact with containment of the electrical arc.
- The opening and closing of the switch is fully independent from the speed of operation, ensuring safe operation under all conditions.
- High temperature withstand: no derating up to 131 °F (55 °C), functional from -40 to +122 °F (-40 to +50 °C).

General characteristics

- High short circuit withstand for ESS applications.
- Range from 800A to 1200A.
- Up to 1500 VDC.
- High-performance switching in a compact design.
- Easy integration.
- Reinforced safety with visible contact indication.
- Efficient with low power-loss.

Designed for harsh environments

- Vibration testing (from 13.2 to 100 Hz at 0.7 g).
- Shock testing (15 g during three cycles).
- Humid temperature testing (2 cycles, 131 °F/55 °C with 95% humidity level).
- Salt mist testing (3 cycles with humidity storage, 104 °F/40 °C, 93% humidity after each cycle).

Easy to install

- Wiring: as the switch is non-polarized all types of wiring and connections are possible.
- Easy access without tools to integrate auxiliary contacts (located within the switch footprint).
- Mechanism can be centred or left aligned (in the factory) to accommodate installation requirements.

Modular solution for flexible configuration

- Single or dual polarity switching.
- The same switch can be used for installation with either grounded or floating networks by choosing the wiring configuration.

The solution for

- > Energy Storage Inverter
- > Battery Energy Storage Inverter

Strong points

- > High short circuit withstand for ESS applications
- > High-performance power switching in a compact frame
- > Safe & reliable operation
- > Designed for harsh environments
- > Easy to install
- > Modular solution for flexible configuration

Conformity to standards

Accessories

Direct operation handle

Frame size	Handle type	Handle colour	Reference
F3	E3	Black	8499 5032

E3 handle

access_400_s_1_cat

Door interlocked external operation handle

Use

Door interlocked external operation handles include an escutcheon and are padlockable. External handles must be utilized with an extension shaft.

Example

As the handle is interlocked in the "ON" position the operator must safely disconnect and isolate the circuit prior to accessing the panel for maintenance procedures.

Opening the door when the switch is in the "ON" position can only be done by defeating the interlocking function with the use of a dedicated tool (authorized personnel only). The interlocking function is restored when the door is re-closed.

S2 type handle

SIRCO MAN and MOT DC / DC ESS

Manual or motorized load break switches for DC applications
2000 A, up to 1500 VDC

SIRCO MAN DC / DC ESS
4 x 2000 A

SIRCO MOT DC / DC ESS
4 x 2000 A

Function

SIRCO MAN DC / DC ES are manually operated multipolar load break switches, while **SIRCO MOT DC / DC ESS** are motorized. Both switches make and break under load conditions and provide safety isolation for any low voltage circuit dedicated to DC applications up to 1500 VDC.

Advantages

High performance switching

SIRCO MOT DC and SIRCO MOT DC ESS motorized load break switches incorporate patented technology, providing a breaking capacity at 1500 VDC with just 2 poles, significantly limiting power dissipation.

Application tested design

Designed and tested for several DC applications, with proven performance in the harshest of environments. The arc extinguishing system provides safe disconnection, rapid arc extinguishing and current interruption.

- Tested against high short circuit systems with and without fuse protection to ensure complete system protection above 210 kA.
- Proven against severe environmental factors including: "Annex Q level C according to IEC" salt spray tested, high temperature and altitude, humidity cycle tested.

Reduced total cost of ownership

Developed with user cost savings in mind, the product features improvements which ensure a lower total cost of ownership.

- Flexible wiring configurations allow for simple in and out wiring, and by not using series bridging bars, cost savings can be achieved.
- Compact solution with reduced footprint and weight improves sustainability with reduced packaging, transportation and installation costs.

General characteristics

- Up to 1500 VDC.
- Patented switching technology up to 1500 VDC in 2 poles.
- Remotely operated product (motor control) - SIRCO MOT only.
- 2 stable positions (I, 0).
- High short-circuit option available.

The solution for

- > Photovoltaic inverters and recombiter boxes (PV)
- > Energy Storage System (ESS)
- > Rail Infrastructure
- > Marine Distribution and microgrids
- > Data center

Strong points

- > High performance switching
- > Application tested design
- > Reduced total cost of ownership

Conformity to standards

- > UL 98B
- > IEC 60947-3
- > GB/T 14048.3

FP ESS

Fuses for energy storage systems
from 160 to 3000 A, up to 1500 VDC

gamme_310.psd

Function

FP ESS fuses are designed specifically for DC networks with high voltage and short circuit levels. They perfectly meet the requirements of energy storage applications and ensure optimal protection of battery racks and battery connection panel (BCP) against short circuits and overloads.

Advantages

Premium performance for energy storage
FP ESS fuses have been specially developed to meet the requirements of Energy Storage applications:

- they are sized for installations with potential short-circuit currents of up to 250 kA and continuous voltages of up to 1500 VDC,
- these fuses offer increased reliability, ensuring consistent performance over time. Their silver-based composition protects them from premature ageing, making them perfectly suited to the cyclic operations characteristic of energy storage application.

A range for a multitude of designs

The FP ESS fuse range covers requirements from 160 to 3000 A, several mounting types and complies with UL, CSA and IEC standards. Combined with the advice of our experts, manufacturers are guaranteed to find the most suitable technical solution by limiting the energy transmitted to the Energy Storage system as much as possible in the event of a fault.

Certified coordination

Combining load break switches with FP ESS fuses enables us to surpass industry standards for protection and safety. Socomec conducts rigorous real-world testing on this combination to push the boundaries of performance and safety even further.

- > IEC 60269-1 /-4

Approvals and certifications⁽¹⁾

- > Combine INOSYS, SIRCOMOT DC ESS Load Break Switches and FP ESS fuses to achieve a level of protection and safety above market standards

The building blocks of an energy storage system

Rack construction

Cells: serial connection to increase ampacity

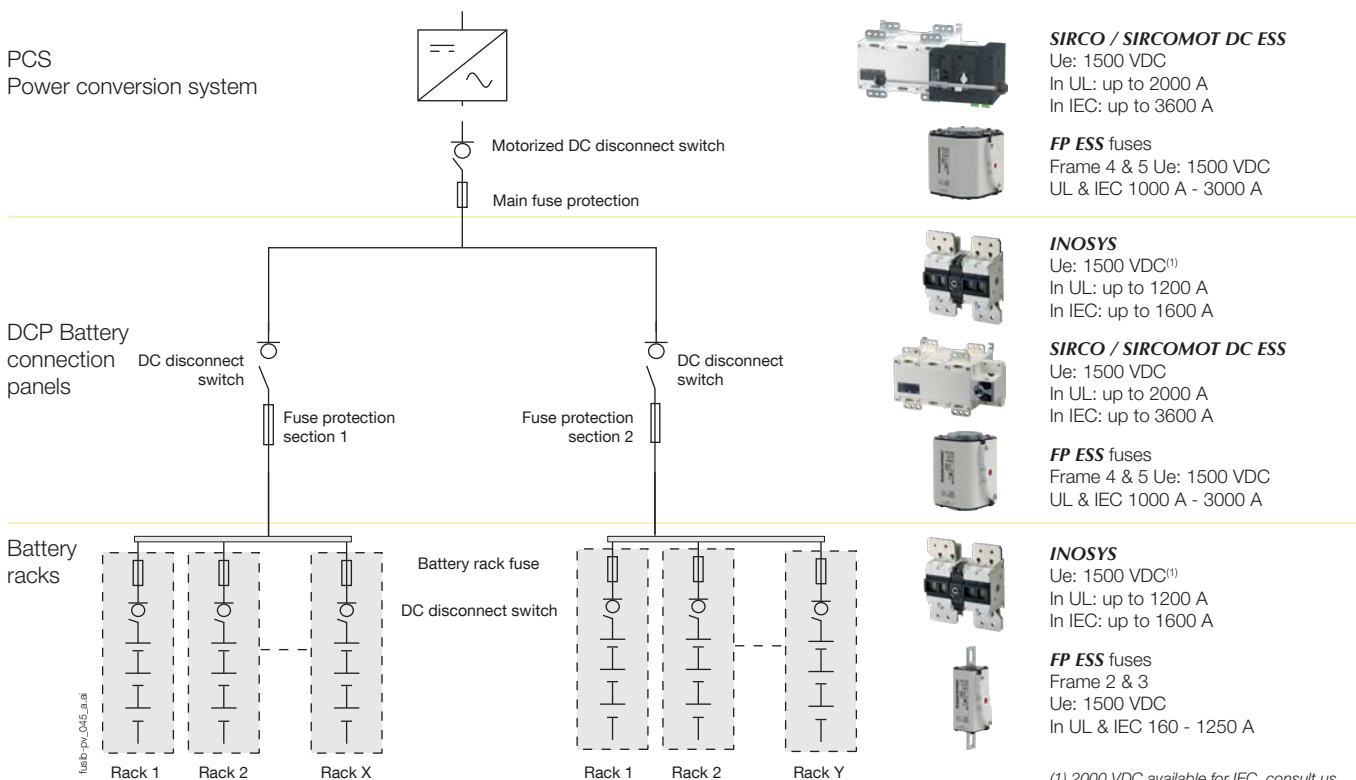

- Cells are connected in serial to create blocks.
- Blocks are connected together into the battery module.
- Battery rack contains several battery modules and includes switch and fuse protection.

System construction

Modules: parallel connection to reach a higher voltage

- Modules are connected together in parallel to reach a higher voltage (1000 VDC to 1500 VDC).
- Battery systems, pack system and containers are connected in parallel to increase ampacity.

Typical energy storage architecture

FP ESS

Fuses for energy storage system

Fuse Solutions: Definite Advantages Over Circuit Breakers

Fuses: High Performance

Due to the high current limiting CC, J and L type fuses, the best protection will be provided to downstream components, such as motor or motor starter. Our disconnects have been designed around this concept to provide 200 kA as a SCCR on most of the range.

Safety

The energy released during a short-circuit is contained in the sealed fuse cartridge. There is no release of ionized gases, thus no effect on surrounding equipment in comparison to what happens when circuit-breakers open during a short-circuit event.

Circuit-Breakers: Reduced Breaking Capacity

The breaking capacity of circuit-breakers reduces dramatically when voltage increases: capacity can decrease from 100 kA at 240 V to 20 kA or even less at 600 V.

Reliability Over Time

Fuses are totally sealed products, which guarantee long-term protection without any maintenance.

Circuit-Breakers are complex devices with moving parts. Their performance is affected by dust and humidity, and needs maintenance.

Re-Close or Replace ?

Circuit-breakers can be re-closed after a fault: their manufacturers' biggest selling point.

You should however consider that the circuit-breaker should be inspected each time there is a significant short-circuit. It is hard to know how many times a circuit-breaker has operated.

In contrast, when a fuse blows, it is replaced by a new one, and the installation is as reliable as prior to the fault.

Thus, re-close or replace ?

Longer Lasting

Our FUSERBLOC has 2 separate design functionalities:

- magneto-thermal protection, made inside the encapsulated fuses
- disconnection thru moving contacts

that stay closed during short-circuit (arc won't destroy them)

- On a circuit-breaker both functionalities are on the same mechanical

Evolution of NEC® Regulation

Requirement of Panel SCCR Art 409 of NEC® 2005 & UL 508A

According to NEC® 2005, all industrial control panels must be marked with a Short-Circuit Current Rating (SCCR).

This covers the entire panel and not just the primary rating of the over-current protection device, as commonly done before.

Calculation of the panel's SCCR is easy with a fuse disconnect switch, since there is a defined table SB4.1 in UL 508 which specifies I_p (peak value) of feeder fuse that can be used for protection of downstream components, which is not the case for circuit-breakers. Thanks to the high current limiting characteristics of the fuses the SCCR of branch circuits can be highly enhanced.

Arc Flash NEC®2005

The NEC now has requirements related to arc flash hazards. Section 110-16, Flash Protection, requires markings on switchboards, panel boards, industrial control panels and motor control centers to warn from potential arc flash hazards. Arc flash mitigation is greatly enhanced by the use of fuses and their current limiting capabilities and fast opening times.

UL/CSA Standards for Disconnect Switches

UL 98 - Enclosed and Dead Front Switches (equivalent to CSA-C22.2 no 4)

These requirements cover enclosed or dead front switches, with or without provision for fuses, at 600 volts or less.

These products are used as disconnecting means without restrictions; they are heavy duty products requiring 2 inches (50 mm) minimum of creepage distance, which gives maximum safety for users and installation. The short circuit withstand of those products goes up to 200 kA.

UL 489 - Molded Case Switches (equivalent to CSA-C22.2 no 5)

These requirements cover molded-case circuit Breaker, molded case switches and fused molded-case switches, rated at 600 volts or less and 6,000 amperes or less.

Typical Control Panel

UL Standards for Electrical Machinery

UL 508 - Industrial Control Equipment (equivalent to CSA-C22.2 no 14)

These requirements cover manual, magnetic and solidstate starters and controllers, overload relays, pushbuttons, selector switches, and control lights.

These are IEC type products, requiring only a creepage distance between phases of 1/2 inch. UL 508 standard requested only 5 kA or 10 kA as short circuit withstand with fuse protection. Their use as a disconnecting mean is therefore limited to local disconnection of motors. These products can only be used as a disconnect means when they have been additionally tested "suitable as motor disconnect". This additional testing ensures that the switch has a proper closing capacity on short circuit faults. UL 508 (switches or circuit breakers) can not be used as the main disconnect of an electrical panel (i.e. in entrance of control panels).

A manual motor controller marked "suitable as motor disconnect" shall be installed only on the load side of the branch circuit protective device (UL 508A 30.3.3 and NEC 430.109(6)).

NFPA 79 Electrical Standard for Industrial Machinery

The following types of machines are identified as industrial machinery:

- metalworking machine tools, including machines that cut or form metal
- plastics machinery
- wood machinery, including woodworking, laminating, and sawmill machines
- assembly machines
- material handling machines, including industrial robots and transfer machines
- inspection and testing machines, including coordinate measuring and in-process gauging machines

Function

FUSERBLOC UL units are manually-operated multipole fusible disconnect switches with the external right front-side operation and comply with UL and CSA standards.

They provide make-and-break on load, safety isolation, and protection against overcurrent for any low-voltage electrical circuit. The switches use double-pole isolator contacts to ensure complete fuse isolation when the switch is in the "OFF" position.

These devices are suitable for use as disconnectors for motors and industrial control panels on service entrance equipment, final panelboards, distribution switchboards, industrial control equipment or motor control centers.

This range is available in right front-side, direct or external control, in 2, 3 and 4 poles and up to 800 A.

Advantages

Improved safety

The double-phase isolator (upstream-downstream of the fuse) and fully visible isolation guarantees the safety of people and equipment against overcurrents.

High breaking capacity

High breaking capacity fuses (200 kA rms) provide protection against overloads and shortcircuits.

Multi-use

The device can be equipped with a "Flange" type front or side operation handles, fitted directly on the product or externally, possibly installed on the door or the side of the electrical box or cabinet. The device is also equipped with voltage measurement terminals for taking measurements and an NFPA 79 compliance kit available as an option.

Simplified use

The TEST position enables testing of the control circuits without turning on the power, thanks to U-type auxiliary contacts. In the TEST position, the cabinet door can be opened.

General characteristics

- For fuses up to 800 A.
- Up to 200 kA.
- AC voltage from 208 V to 600 V.
- Accepts Class CC, J, L and T-fuses.
- 2P, 3P or 4P available.

Accessories

Electronic fuse operation indication (FMD)

Use

For fuse cartridge BS88, DIN and UL.

Principle

The FMD detects fuse operation using a bistable relay and a signaling LED.

It can be mounted on a DIN rail, a back plate, next to the FUSERBLOC, or on the door.

External handle

Use

The locking function of the front external handle prevents the user from opening the door of the enclosure when the switch is in the "ON" position and when the switch is padlocked in the "OFF" position (S1, S2, S3 and S4 type handles only).

Opening the door when the switch is in the "ON" position is possible by defeating the interlocking function using a tool (authorized persons only). The interlocking function is restored when the door is re-closed.

S-type handle raiser

Use

Enables S-type handles to be fitted in place of older-style SOCOMEC handles. An adapter can also be used as a spacer to increase the distance between the panel door and the handle lever.

Dimensions

Increases distance to door by 0.47 in / 12 mm.

U-type auxiliary contacts

Use

U-type AC can be configured to be operated on both standard and TEST position switches from CD 30 to 800 A. Each slot can accommodate up to 2 interlocked ACs.

- For CD 30A/CC, a maximum of 4 ACs (8 with an additional holder);
- For CD 30A/J, maximum 2 ACs (6 with an additional holder),
- For 30 to 200A/J, maximum 4 ACs.
- For 400 to 800A/L, maximum 8 ACs.

Electrical characteristics

A600.

When FUSERBLOC is front operated, ACs are prebreak and signaling position I and 0. When FUSERBLOC is side operated, ACs are signaling positions I and 0.

FUSERBLOC DRIVE 1PP

Single-pole pre-charge fuse combination switches for variable speed drives from 600 to 1700 A

FUSERBLOC DRIVE 1PP

The Solution For

- > Energy
- > Industry

Strong points

- > Simple and compact
- > Automatic pre-charging
- > Optimized maintenance
- > Optimized safety

Conformity to Standards

- > IEC 60947-3
- > UL 98

Function

FUSERBLOC DRIVE units with manual front operation are multipole DC fuse load break switches. They offer short circuit protection for all low-voltage electrical circuits of capacitive loads (capacitor) by limiting the high inrush current during circuit power-up and are designed to allow maintenance work on DC/AC variable speed drives or PV inverters without shutting down the entire installation. The range is available in direct and external operation, with 2 power poles + 1 pre-charge pole, up to 1700 A.

Advantages

Simple and compact

The FUSERBLOC Drive unit is the most compact and simple solution in the market for variable speed drives under a common DC bus. This product combines 3 functions, namely disconnection, protection and precharging in one and the same device.

Automatic pre-charging

After servicing operations, pre-charging of inverter capacitors is managed automatically via a coil. Further, the opening of the precharging poles and closing of the power poles is also carried out automatically.

Optimized maintenance

This multifunction device enables maintenance work to be done on part of the power system while leaving the rest of the equipment powered on.

Optimized safety

Double phase isolation (upstream-downstream from the fuse), disconnection and padlocking keep personnel completely safe while replacing a fuse. The device is capable of maintaining the OFF, pre-charge or ON position in the event of power failure.

General characteristics

- For high-speed fuses up to 1700 A.
- Up to 1250 VAC, 1000 VDC.
- Up to 100 kA.
- Utilisation category DC 20B.
- 2 power poles + 1 pre-charge pole.

RM CC

Modular Fuse Holders

For CC fuses

Function

RM CC are modular DIN rail mounted fuse holders for UL Class CC fuses. They are available with and without LED indication in 1, 2 and 3-pole versions. RM CC fuse holders are IP20 protected from touch by fingers and provide safe non-load breaking and isolation of electrical circuits up to 600 V / 30 A.

Advantages

Improved safety

- Multipolar and simultaneous disconnection
- High dielectric strength
- Protection IP2X

High breaking capacity

Protection against overload and short-circuit events due to the high breaking capacity of fuses (200 kA rms).

Accessories

- Padlocking kits
- Coupling kits

The Solution For

- > Industrial control panels
- > Motor and control circuits
- > Transformers protection
- > Measuring devices and multi-function meter protection

Strong Points

- > Touch Safe
- > High breaking capacity (SCCR)
- > Modular
- > DIN rail mounting
- > Non-load disconnect

Compliance with Standards

- > UL 4248-4

- > IEC 60269-2-1

Approvals and certifications⁽¹⁾

⁽¹⁾ Product reference on request.

Function

RM and **RMS** are modular fuse holders for cylindrical fuses. They safely provide non-load disconnection and protection against overloads and short-circuits in any low voltage electrical circuit.

- RM: Non-signalling fuse holders for fuses without strikers
- RMS: Fuse disconnect switches with pre-break auxiliary contact, position and blown indication

Advantages

Improved safety

- Multipolar and simultaneous breaking
- High dielectric strength
- IP2X protection

High breaking capacity

Protection against overload and short-circuit events thanks to the high breaking capacity of fuses (100 kA rms).

Accessories

- Microswitchers for RMS 50 & 100A
- Padlocking capabilities
- Ganging kits to form multipolar from single poles
- Wiring combs

Fuse Combination Switches

For Specific Applications

Despite already offering a wide range of fuse combination switches, SOCOMEC also manufactures specific products suitable for all your requirements and dedicated to specific applications. Some of these products can be seen on these two pages, however this list does not include them all. Please contact us for more information.

Fused Changeover Switches

Available from 600⁽¹⁾ to 800 A, the **FUSERBLOC changeover switch** range is a great solution for safe guarding of energy supply, protection and disconnection of stand-by pumps and other sensitive loads.

(1) Other ratings: please consult us.

Factory mounted UL 98 certified 600 A and 800 A fusible changeover switches with three stable positions:

I – 0 – II and padlockable in OFF position.

Typical applications

The transfer switches 1008 range provides safe transfer for mains/genset and genset/genset applications.

COMO CS

Manual Cam changeover switches
from 25 to 100 A

COMO CS - Door mounting
I-II 3 P 25 A

COMO CS in enclosure
I-0-II 3 P 40 A

Function

COMO CS are manually operated multi-pole changeover switches. They ensure switching, transfer of sources or transfer of two low voltage circuits on load as well as their safe disconnection.

Advantages

Simple installation

The “quick fix” allows significant time saving in fixing the handle to the device. The devices sold in enclosed version are ready for installation.

Quick mounting

The accessories offered are common to all the products in the range. The products are designed for installation:

- on the rear of the cabinet on a backplate,
- on the rear of the cabinet on a DIN rail,
- on the door with a direct handle.

Effective in all circumstances

The devices are available with 3 standard switching types that can cover a wide variety of applications:

- I-II
- I-0-II
- I-0-II with bypass

Please consult us for adaptations to specific wiring diagrams.

Manual Cam changeover switches
from 25 to 100 A

Other solutions with enclosures

General characteristics

como-enc_018.jpg

- Available for switching types I-II and I-0-II
- Different enclosure sizes adapted to your needs.
 - Maximum safety during maintenance operations due to triple padlocking of the handle in position 0 (position I for switching type I-II).
 - NEMA 4, 4X / IP 65 when installed in an industrial environment, protection degree NEMA 4, 4X / IP 65 ensures that the products are protected against dust and water jets.
 - Red-yellow operating handle.

SIRCOVER UL 98/1008

Manually operated transfer switching equipment
from 100 to 1200 A

Function

SIRCOVER UL 98/1008 are heavy duty manual transfer switches. They ensure switching transfer of sources or transfer of two low voltage circuits on load as well as their safe disconnection.

These switches are extremely durable and are tested and approved for use in the most demanding applications, such as resistive load or total system applications.

Advantages

Stable positions

SIRCOVER UL has three stable positions which are not affected by voltage drops or vibrations, thus protecting your load against network interference.

Compact design

The SIRCOVER UL is based on a back-to-back switching technology, providing a compact solution.

On-load switching

The SIRCOVER UL enables secure and reliable switching, without the need for pre-breaking upstream.

Reliability

The SIRCOVER UL has double breaking per pole achieved through its sliding bar contacts system. The quick opening and rapid closure provides simultaneous disconnecting or making of all power contacts.

The solution for

- > Standby power builders
- > OEM/Machine Builders
- > Industrial Control Panel Manufacturers (UL 508A)
- > Switchboard Manufacturers (UL 891)
- > Distributors

Strong points

- > Stable positions
- > Compact design
- > On-load switching

UL 98 and CSA from 600-1200 A. Specific reference from 100 to 400 A on request.

Enclosed solutions

The SIRCOVER UL is also offered enclosed, please consult us for more information.

Enclosed
SIRCOVER

Typical application

The SIRCOVER UL 98/1008 range provides safe transfer and disconnection within your LV installation for optional standby systems (as described in NEC Article 702).

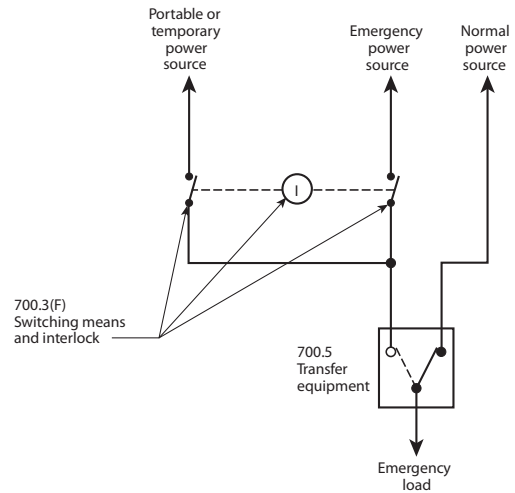

Standard applications also include:

- Transfer from Normal power supply to the backup genset source (emergency supply).
- Safe on load transfer.
- Changing motor phase rotation and equipment grounding connection.

svr-ul_017_a

The SIRCOVER UL 98/1008 can also be used as switching means to a temporary power supply in emergency systems (systems needed for human safety) as described in article 700.3(F) of the NEC (see example below "switching means and interlock").

Use

The handle interlocking function prevents the user from opening the door of the enclosure when the switch is in the "ON" position.

Opening the door when the switch is in the "ON" position is possible by defeating the interlocking function with the use of a tool (authorized persons only).

The interlocking function is restored when the door is re-closed.

ATyS UL 1008

Non-automatic Transfer Switching Equipment
from 100 to 1200 A

Function

ATyS non-automatic transfer switches are designed for use in total system optional standby applications for the safe transfer between a normal and an alternate power source.

The changeover is done in open transition and with minimum supply interruption during transfer ensuring full compliance with UL 1008. The ATyS is a full on-load disconnecter where the main components are based on proven technology also meeting requirements in UL 98 and IEC 60947-3 standards.

Advantages

Robust and Reliable design

ATyS is a remotely operated transfer switch tested in full compliance with UL 1008. The design integrates a failsafe mechanical interlock to ensure that the main source is never inadvertently connected to the alternate. The stable position design ensures that the switch is unaffected by vibration or network voltage perturbation. The ATyS also includes a removable handle for on load manual operation. This is extremely safe and easy to use. The ATyS also includes a fully rated switched neutral pole.

Maintenance free

The self-cleaning contacts of the ATyS allow the power section to be maintenance free. For safe downstream maintenance the ATyS includes a facility for isolation and padlocking in the zero position.

In the unlikely event of a motorization failure, the ATyS is designed in a way that the motorization can be replaced easily and very quickly. Furthermore, the ATyS remains manually operational with or without the motorization in place.

Compatible with virtually any ATSE controller

The ATyS is directly compatible with virtually any transfer switching control solution that provides volt free contacts. This allows the ATyS to be combined with most ATS controller available on the market and then used in automatic transfer switch applications.

The solution for

- > Standby power builders
- > OEM/Machine Builders
- > Industrial Control Panels Manufacturers (UL 508A)
- > Switchboard Manufacturers (UL 891)
- > Distributors

Strong points

- > Robust and reliable design
- > Compatible with virtually any ATS controller
- > On-load manual operation
- > Maintenance free

Conformity to standards

- > UL 1008 guide WPYV File 317092
- > IEC 60947-6-1

Your choice of ATS controls

- > Socomec's ATyS C66 or your preferred brand of ATS controller, genset/AMF controller or power/building management system, may easily be paired with the ATyS to provide a complete automatic transfer switch that perfectly suits your needs.

Typical applications

The ATyS UL 1008 range provides safe transfer for mains/mains, mains/genset and genset/genset applications.

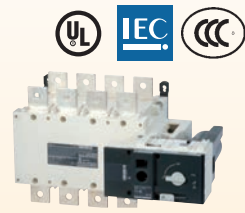

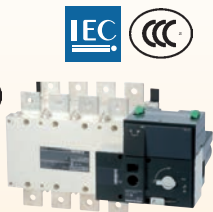

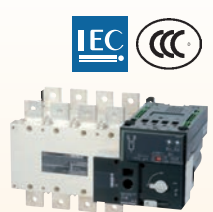

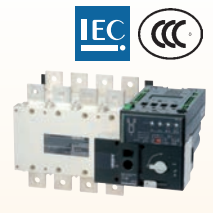

Part of a globally recognized range

The ATyS UL 1008 is part of a large family of products including a complete range of remotely operated and fully automatic transfer switches that comply with IEC and GB standards.

The ATyS range is a world renowned product family trusted by some of the largest manufacturers in the genset industry.

The key to success has been through reliable power availability provided by products that are safe and easy to use.

ATyS FT - ATyS DT

Automatic Transfer Switching Equipment
from 100 to 400 A

Function

ATyS FT and ATyS DT are fully automatic open transition transfer switches for use in total system emergency, legally required and standby applications for the safe transfer between a normal and an alternate power source.

ATyS FT is a fast transfer switch with no center off position and the ATyS DT is a delayed transfer switch with a center off position allowing full control of the time spent disconnected from both incoming sources.

Advantages

Robust, reliable and high performing

Rated for emergency systems and total system without derating, these switches also include high short-circuit rating with specific breakers or fuses up to 100 kA.

Safe manual handle

The ATyS FT and ATyS DT ensure the safety of your maintenance personnel due to patented safety features.

Access to the manual handle is prohibited by a transparent polycarbonate cover that requires a deliberate action to open. Once the cover is opened, the switch and the controller are both electrically inhibited which prevents any unexpected transfer during maintenance. The power switching characteristics when using the main manual handle are as reliable as when operated automatically ensuring safe transfers in all cases.

Intuitive use and simple installation

The ATyS FT and ATyS DT include the ATyS C66 controller, designed for simple and intuitive configuration.

Inspectable contacts

The ATyS FT and ATyS DT are specifically designed to reduce the time it takes to inspect power contacts due to the specific maintenance mode.

The solution for

- > Emergency systems
- > Legally required standby systems
- > Optional standby systems

Strong points

- > Robust, reliable and high performing
- > Safe manual handle
- > Intuitive use and simple installation
- > Inspectable contacts

Conformity to standards

- > UL 1008
CSA-C22.2
No.178.1-14
Guide WPWR
File E506172

Typical applications

The ATyS FT/DT range provides safe transfer for mains/mains or mains/genset in emergency, legally required and optional standby systems as described in the NEC® (NFPA 70).

Additional Products

ATyS C66

The ATyS C66 controller is also available as a standalone product (certified to UL 61010) easily configurable for use with all transfer switching technologies (switches, contactors or circuit breakers). The ATyS C66 features intuitive menus, configurable I/O and is NEMA 3R/12 rated.

See the separate catalog pages for more details on the ATyS C66 controller.

ATyS UL 1008

The ATyS UL 1008 is designed to meet the requirements of UL 1008 optional standby applications rated from 100 to 1200 A featuring a field replaceable motor and maintenance free contacts.

See the separate catalog pages for more details on the ATyS UL 1008.

Additional auxiliary contact kit

Use

The ATyS FT and the ATyS DT ship with 2 NO/NC auxiliary contacts already mounted on the switch. If additional auxiliary contacts are needed this kit includes 2 additional auxiliary contacts as well as a polycarbonate protection cover to protect from direct contact on auxiliary contact terminals. These additional auxiliary contacts are installed on top of the existing auxiliary contacts.

ATyS C66

UL ATS Controller

for Open and Delayed Transition

ATyS C66

Function

ATyS C66 is an ATSE controller designed to control all types of emergency system, legally required and optional standby transfer switching equipment. The ATyS C66 is cULus 1008 listed with ATyS FT* and ATyS DT* power contactor switches as well as cURus 1008 and cULus 61010 listed for use with circuit breakers or contractors. ATyS C66 ensures automatic and manual transfer from one source to another with fully configurable timers and thresholds.

* ATyS FT Fast Transfer, ATyS DT Delayed Transfer.

Advantages

Fast commissioning

On initial power up, the ATyS C66's smart wizard will guide the operator through the commissioning process.

User customizable

Front panel LEDs, load shedding, engine exercisers and the elevator control signal are just some of the customizable features available on ATyS C66.

Intuitive operation

- The high-resolution LCD screen provides several dashboards enabling easy monitoring of all parameters, including power and energy consumption of the loads.
- The integrated energy backup provides transitional power to the product enabling status indication (switch position, timer status, fault notifications) and communication to remain active with no supply present.
- Quick and easy access to main functions through the front panel with direct key input.

General characteristics

- Self-powered from voltage sensing.
- Wide voltage range (88 - 576 VAC).
- 24 VDC aux power supply (for optional use).
- 6 x 8A programmable dry contact Form C outputs (SPDT) (2 latching relays).
- 6 x programmable inputs.
- DIN rail mountable I/O extension, up to 30 inputs and 18 outputs (accessory).
- Power & Energy metering with 1 or 5A current transformers.
- Up to 30 second energy backup.
- Smart wizard.
- 3000 Alarms and Events.
- Built-in engine exerciser with 4 independent programs.
- Associated Webserver software.
- In-phase transfer.
- Tiered access levels of password protection.
- UV tested.

Communications	
Interface type	RS485. 2 to 3 half duplex wires
Protocol	MODBUS RTU
Baudrate	Programmable 1200 - 115200 bps
Digiware bus cable	RJ45 specific cable
Display	
Screen resolution	350 x 160 pixels
Event recorder	3000 events

(1) 8 kV tested between phases of a different source and 6 kV tested between phases of the same source.

Terminals

1. Configuration USB
2. 24 VDC aux power supply (for optional use)
3. 6 x inputs
4. 2 x latching relay outputs
5. 4 x relay outputs
6. Source sensing (110-480 ±20%)
7. RS485 communication
8. Current transformers (1 or 5A)
9. Digiware RJ45 connectors
10. Replaceable RTC battery
11. Hard reset button

Power Distribution Blocks

Distribution

Function

SOCOMEK **Power Distribution Blocks** allow for easy connection to conductors to distribute power from one load into multiple smaller loads. They are installed downstream of a disconnect switch, transfer switch or circuit breaker.

Advantages

IP20 finger safe protection

- IP20 rated
- Finger-safe design provides touch safe protection from live parts

Wide range

The extent of the range makes it possible to find the distribution system adapted to its needs:

- 5 single pole power distribution blocks UL
- 4 single pole power distribution blocks UR
- 1 multipolar power distribution blocks UR

Easy integration

The compact design of the different distribution blocks allow for easier integration into the equipment.

Flexible wiring

Allows use of standard solid, stranded and fine wire strands with use of compression sleeve

UL & IEC range

The range of distribution blocks comply to both UL standards & IEC standards

Application

The solution for

- > Industrial Control Panels Manufacturers (UL 508A)
- > Switchboards Manufacturers (UL 891)
- > Distributors
- > OEM/Machine Builders
- > PV Combiner/Re-Combiner Box Manufacturers

Strong points

- > IP20 finger safe protection
- > Wide range
- > Easy integration
- > Flexible wiring
- > UL listed

Conformity to standards

- > UL 1953

Power Distribution Blocks UL 1953

General Characteristics

- Material: tin plated aluminum
- Suitable conductors: aluminum or copper
- IP20 finger-safe
- Adjustable Dial allows for Selection of L1–L2–L3 phase designation
- Simple and secure DIN rail locking clips allow for easy mounting on DIN rail
- Panel mounting
- Included connection clip allows to join multiple poles together
- Voltage Ratings: 1000 VAC/DC UL 1500VAC/VD IEC

Rigid Copper Bars

Busbar

bars_001

Function

The SOCOMEC **Rigid Copper Bars** are suitable for providing main or distribution connections.

Composition of the range

Solid bars

- Thickness: 4.5 and 10 mm
- Width: 20 to 160 mm
- Length: 1750, 2900, 5800 mm

Pre-punched bars

- Thickness: 5 and 10 mm
- Width: 25 to 125 mm
- Length: 1750 mm

Pre-punched and threaded bars

- Thickness: 5 mm
- Width: 15 to 32 mm
- Length: 990mm

Solid bars

- Determination of the admissible current I_z (A) for solid bars, in usual use conditions (Temperature ambient 113°F / 45°C, admissible warming of the bars 95°F / 35°C, 50 Hz current)

Pre-punched copper bars

- For the pre-punched bars of same dimensions as the solid bars: pre-punched $I_z = 0.9 I_z$ solid

Aluminium bars

- For the aluminium bars of same dimensions as the solid bars: I_z aluminium = 0.78 I_z solid copper

Connector for drill-free connection on the busbar

- Bars for thickness 10 mm

Connection Earth / Neutral

- Corner piece for Earth / Neutral connection, L = 1750 mm
- Earth bar, L = 470 mm and L = 120 mm

The solution for

- > Industrial Control Panel Manufacturers (UL 508A)
- > Switchboards Manufacturers (UL 891)
- > Distributors
- > OEM/Machine Builders

Accessories

Drill-Free Connection Accessories

Use

- Allows for drill-free connection of flexible bars or cables onto a busbar
- Connection across 2 bars, 10 mm thick, placed side by side, 10 mm apart
- Compatible with busbar supports in the SBC range
- For terminals or flexible bars with widths greater than 40 mm, use 2 connection accessories
- Secured with M10 screws, tightening torque 45Nm
- To make a connection: Use 1 securing clamp and 1 screw adapted to the height of the bars are required

Insulated Flexible Copper Bars

Busbar

Function

SOCOMECC **Insulated Flexible Copper Bars** are mainly used for providing the power connections between busbars and the disconnection devices inside an electrical panel.

The insulated layered copper allows the flexible copper bar to be easily bent to provide a customised solution.

Advantages

Easy Installation

- Compact version
- High level of flexibility enabling easy manipulation of the busbar
- Reduced installation time with the elimination of terminal lugs and their crimping

Increased Safety

- Elimination of crimped connections
 - » Better behavior under short-circuit conditions.
 - » Decreased number of heating points.
 - » More reliable connections.

Characteristics

- Width of 9 to 100 mm.
- Copper layer thickness from 0.8 to 1 mm.
- Length of 6.56 ft / 2 m.

Conductor

- Layers of electrolytic copper Cu/ETP, final annealing state.

Insulator

- High temperature co-extruded vinyl compound on the copper strips (insulation thickness: 1.5 to 2 mm)
- Self-extinguishing: NFC 32200 and UL 94 V0
- Continuous temperature withstand: 221 °F / 105 °C
- Shore hardness A: 89 +/- 2
- Module 100 % elongation: 16 Mpa
- Resistance to elongation: < 15 % mini
- Breaking stress: 20 Mpa
- Transversal volume resistivity: 6.1015 Ω
- Oxygen index: 29.5 %
- Scratch and tear resistant

Insulated flexible busbar

- Operating-temperature range: from -40 °F / -40 °C to + 221 °F / +105 °C
- Maximum operating voltage: 1000 VAC / 1500 VDC
- Alternating voltage withstand (10 minute test):
 - » between core and insulation: 16.5 kV
 - » between two insulating elements in contact: 33 kV
 - » Conductivity: 100 IACS
 - » HV < 50
 - » Resistance to traction $R_m > 200 \text{ N/cm}^2$
 - » Stretch before break 35 %
 - » Resistivity: 1.724 micro Ω/cm at 68 °F / 20 °C

The solution for

- > Industrial Control Panels Manufacturers (UL 508A)
- > Switchboards Manufacturers (UL 891)
- > Distributors
- > OEM/Machine Builders

Strong points

- > Easy to install
- > Increased safety by the elimination of crimped connections

Conformity to standards

- > UL 67 and UL 891

Implementation

Flexible bars should be mounted on insulated supports with a maximum distance of 400 mm. Bars should also be held together with straps, as shown in the above diagram. The distance between successive straps depends on the electro-dynamic constraints in the event of a short-circuit. The table below gives the recommended distances between straps.

I _{sc} max. (kA rms)	Distance x between straps (mm) ⁽¹⁾
20	350
25	200
35	100
45	70

(1) 9 mm straps, load 176 lbs / 80 kg.

Parallel Systems

Putting bars in parallel increases the temperature of the air near the bar, which forms a reduction coefficient

No. of barres in parallel	Aamperage at ΔT 104°F/40°C	Correction factor
I	any intensity	1
II	< 900A	1,72
II	> 900A	1,65
III	< 900A	2,25
III	> 900A	2,12

(1) For ambient air temperature of 104 °F / 40 °C
Important: max. busbar temperature = 221 °F / 105 °C

L: length of bar in metres
l: width of bare busbar in mm
N: number of copper layers
e: copper layer thickness in mm

Insulated Copper Braids

Busbar

barrm_023_eps

barrm_022_eps

Function

SOCOMEK **Insulated Copper Braids** are mainly utilized for providing the power connections between distribution busbars and the devices within an electrical panel.

Their flexibility is particularly suited to complex and diverse connections in confined spaces.

Technical characteristics

- Electrolytic copper, annealing state
- Operating voltage 1000 VAC - 1500 VDC
- Dielectric strength 20 KV/mm
- Operating temperature: -40° - 221°F | 40° - 105°C
- Self-extinguishing: UL 94 V0
- Contact surface: Bare copper

Advantages

Easy Installation

- Compact design
- Length and orientation are easily adapted
- Prewired

Application Variety

- Amperage up to 1000 A
- Suitable for various connection ranges
- Lengths from 7.87 - 31.5in | 200 - 800mm

Compatibility

- With SOCOMEK devices
- With most commercial circuit breakers

The solution for

- > Industrial Control Panels Manufacturers (UL 508A)
- > Switchboards Manufacturers (UL 891)
- > Distributors
- > OEM/Machine Builders

Strong points

- > Easy Installation
- > Application Variety
- > Compatibility

Busbar Supports

Busbar

Function

SOCOMEK **Insulating Busbar Supports** enable the fixing of copper or aluminium busbars.

Characteristics

Insulators

- Polyester without halogen
- UL94 VO self-extinguishing
- Color red RAL 3002
- Operating temperature from -40 to 266°F
- Deformation under load temperature (ASTM D643): > 392°F / 200°C
- Dielectric constant (ASTM D150): 4/5
- Arc resistance (ASTM D495): > 180 s
- Water absorption (ASTM D570): < 0.3%

Busbar supports

- High dielectric strength
- High mechanical resistance
- Non-magnetic assembly parts
- High resistance to damp heat (supplied "with a conformal coating")

Stair type supports

- Thermoplastic material
- UL 94 VO self-extinguishing
- Insulating voltage: 1000 V

Software tool for size selection

Mechanical Systems is a software that can be utilized to size bar sets. It defines the configuration of the busbar system, including bar section and distance between supports, according to the required electrical characteristics of the panel in compliance with standard IEC 61439-1. The software runs on Windows® 7 and 10.

Visit our website www.socomec.us.

160 x 10 x 2	1000	800	400	350	250	75	4150

Adhering to the **maximum distance** between two supports ensures that the busbar supports are able to withstand the given short circuit current values. At these limits, distortion of the copper bars may occur. These deformations are permitted by standard IEC 61439-1 so long as they adhere to the insulation distances.

(1) Admissible busbar nominal current with a temperature inside the panel of between 113°F and 176°F.

For other mounting configurations, please contact us.

sc_196.png

Ordering guide

- For three poles, order: 6 x inserts, 2 x studs, 2 x profiles.
- For four poles, order: 8 x inserts, 2 x studs, 2 x profiles.

Define Your Exact Busbar

- > For your busbar, fitted with hexagonal insulators, to be mechanically resistant to a short-circuit, it must correspond to the table below.
Values according to IEC 61439-1.

General Characteristics

Height H (mm)	Threading	Bar x qty	L max. (support bars in mm) for					d min. (mm)	Iz (A) ⁽¹⁾

The solution for

- > OEM/Machine Builders
- > Industrial Control Panels Manufacturers
- > Switchboard Manufacturers (UL 891)
- > Distributors

Strong points

Suitable for use as:

- > Manual motor controller
- > OSHA Lockout/Tagout disconnects
- > Safety switches
- > Emergency power electrical installations

Function

Enclosed disconnect switches range are used as:

- The NEC required motor disconnect upstream from the motor.
- Main disconnecting means, fusible and non-fusible.
- OSHA Lock Out / Tag Out devices to isolate a load for maintenance, service or repair.
- Transferring low voltage circuits on load.

Advantages

A flexible range

- Designed for normal as well as difficult or harsh environments (wash down, mechanical impacts, corrosion...).
- UL / NEMA rated enclosures up to 1, 3R, 12, 4, 4X.
- Metallic and nonmetallic enclosures.
- Compact design.
- For applications up to 1200 A.

High switching performance, simple wiring

- High short-circuit rating.
- Reliable switching technology.
- Large terminals.

Robust and ergonomic handle

- Red/Yellow handle (available in black).
- Painted steel enclosure are equipped with heavy duty handle with metallic padlock hasp.
- Clear On - Off positions indication.
- 3 padlocks capability.
- Door interlocking in ON position and padlocked in OFF position.
- Defeatable door interlock in ON position. (The interlocking is automatically reactivated when the door is closed, except for polycarbonate boxes up to 60A).

Choosing the right power meter!

Socomec offers a wide range of power meters serving a variety of applications and market segments.

Power meters are available in different shapes, form factors and functionality levels to address each application's requirements. This is why selecting the right power meter typically requires details about your application and the expected integration.

The below flowchart aims at simplifying the selection process, guiding you towards the right solution through basic questions, but many additional questions can be asked to make this selection even more accurate:

Typical questions

Where is the meter going

Does the meter need to communicate measurements to a 3rd party system?
What is the preferred communication

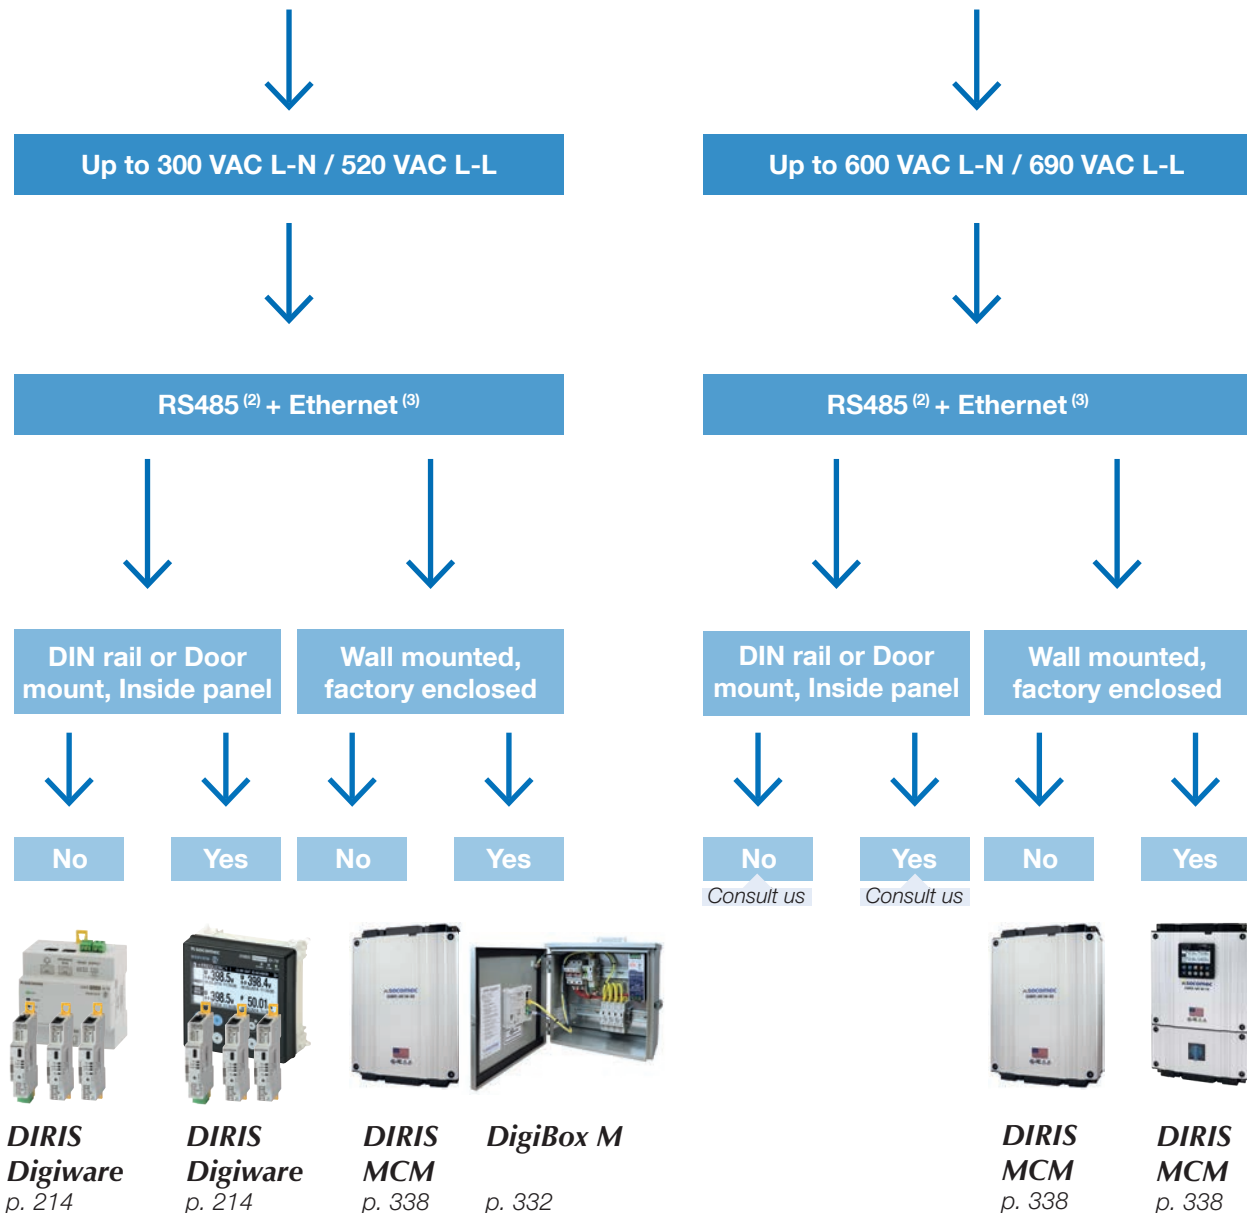

Do you need a local display?

How many circuits need to be monitored?
Are all circuits under the same voltage source?

What measurement

Is a web interface needed to visualize measurements?

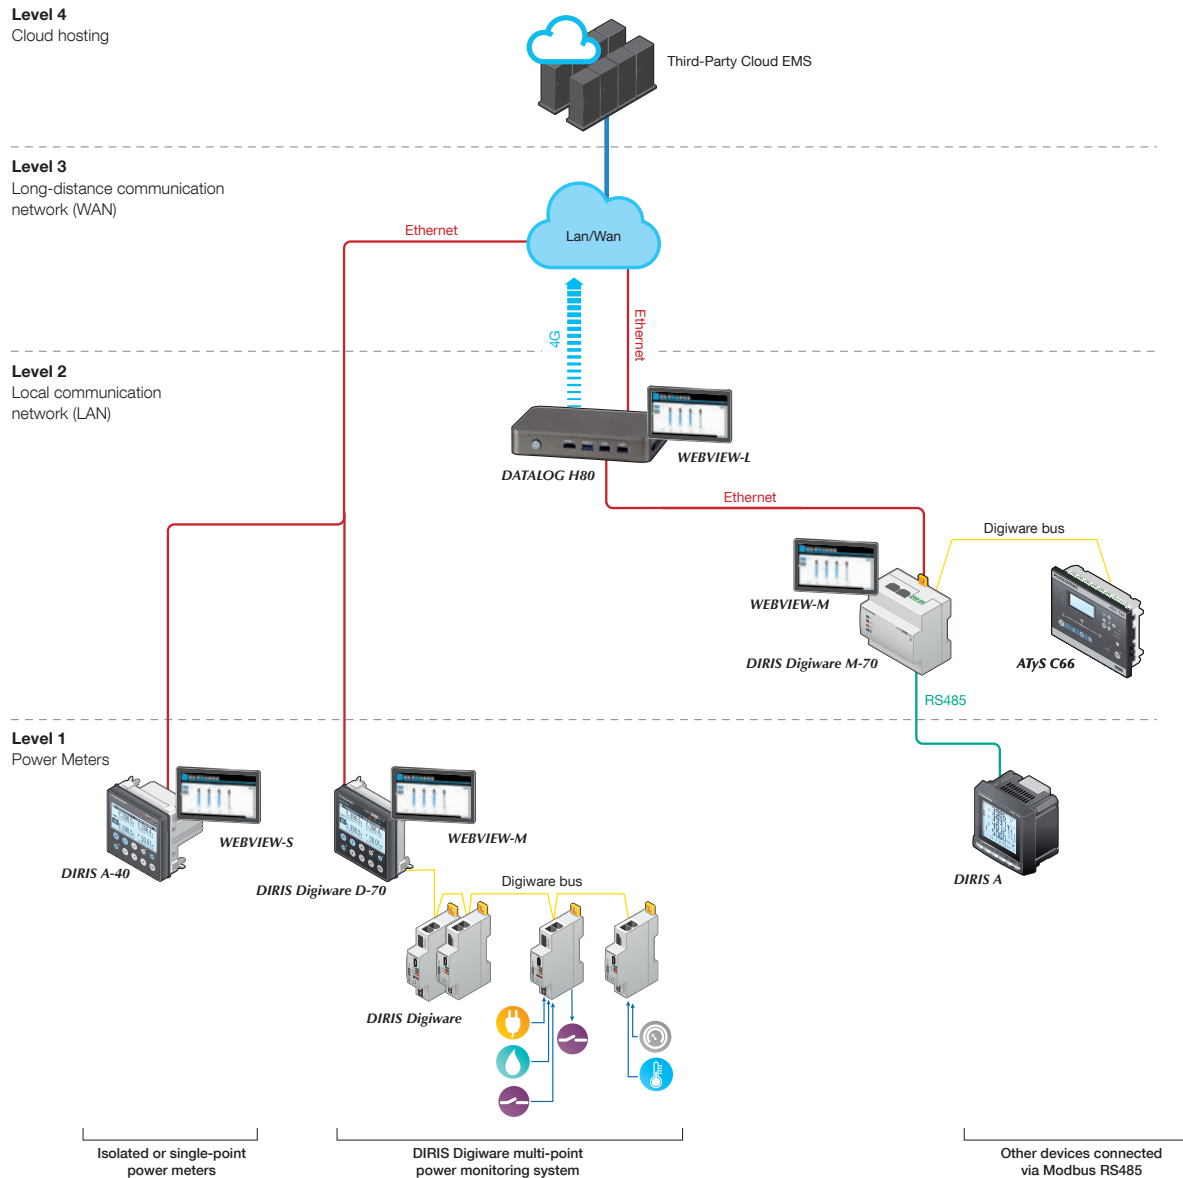

Multi-load ⁽⁴⁾

(4) Multi-load defined as multiple three-phase or two-phase or single-phase loads sharing the same voltage source

Power Monitoring Architecture

Expert Services

Our service engineers are an essential part of our team, and they are dedicated to ensuring your power monitoring system provides accurate and reliable measurements to your EPMS software or SCADA system.

Our services include:

- > Site audits to verify the proper wiring of your system
- > Personnel training on how to configure, operate and maintain power monitoring equipment and associated software
- > Remote and on-site commissioning to ensure that your system is up and running quickly, with peace of mind.

For further information, please contact your nearest SOCOMEC branch.

Multi-point Power Metering & Monitoring

DIRIS Digiware AC & DC

Flexible

A modular concept allowing you to customize your own system to monitor any number of circuits within switchboards, panelboards, motor control centers etc

Versatile

More than just energy metering, the system monitors power quality, breaker status & trips, collects pulses from gas/water meters and reads analog 0/4-20 mA signals.

Web interface

Access real time and historical measurements remotely thanks to a free built-in web interface on all Ethernet based power meters.

Multi-circuit

Monitor up to 64 three-phase circuits in one system. With shared communication, power supply, and voltage module, installation time costs and space are significantly reduced.

PreciSense technology

Unrivalled class 0.5 system accuracy (including current sensors), exceeding revenue grade requirements and ensuring reliable measurements under all conditions.

Power supply P15 100-240VAC/24VDC 15W for Digiware system	4829 0120

When **energy** matters

Single-point Power Metering & Monitoring

DIRIS A & B

RJ12 current sensors

The easiest, fastest way to connect current sensors thanks to a unique RJ12 concept. The mV output signal means no shorting blocks are needed!

Multi-protocol

RS485 or Ethernet, with Modbus RTU, Modbus TCP and BACnet IP protocols to ensure compatibility with your BMS.

PreciSense technology

Unrivalled class 0.5 system accuracy (including current sensors), exceeding revenue grade requirements and ensuring reliable measurements under all conditions

Web interface

Access real time and historical measurements remotely thanks to a free built-in web interface on all Ethernet based power meters.

Cyber security

Industry leading cyber security features to guarantee the confidentiality, integrity and availability of data.

Selection Guide

Accessories

Description	Reference
T-10 RJ12 adaptor (necessary to connect to DIRIS A-200 power meter)	4829 0620
DIN Rail mounting accessory ⁽¹⁾	4950 0031
Mounting Bracket Ø30; Ø50; Ø80/120; Ø200; Ø300	4950 0001; 4950 0002; 4950 0003; 4950 0004; 4950 0005

(1) The DIN Rail mounting accessory is supplied with Δ IP-R, but not with Δ IC zero-sequence current transformers.

Enclosed Power Metering & Monitoring

DIRIS DigiBOX A, B & M

Safe & Reliable

Factory pre-wired internally with fused voltage connections, assembled at our UL 508A panel shop.

PreciSense technology

Unrivaled class 0.5 system accuracy (including current sensors), exceeding revenue grade requirements and ensuring reliable measurements under all conditions.

RJ12 current sensors

The easiest, fastest way to connect current sensors thanks to a unique RJ12 concept. The mV output signal means no shorting blocks are needed!

Multi-protocol

RS485 or Ethernet, with Modbus RTU, Modbus TCP and BACnet IP protocols to ensure compatibility with your BMS.

Web interface

Access real time and historical measurements remotely thanks to a free built-in web interface on all Ethernet based power meters

Enclosed multi-point sub-metering

DIRIS MCM

Multi-circuit

Up to (16) three-phase meters in one small physical footprint, with (48) independent current sensor inputs.

mV current sensors

Split-core and Rogowski current sensors are mV based and can be connected safely under load, even with meter cover removed and voltage applied.

Safe

No circuitry or live parts accessible on the meter, allowing to safely operate it even with cover removed and voltage applied.

CT correct algorithm

Cutting-edge algorithm detects potential wiring or configuration errors and proposes the adequate software changes.

Optional wireless interface

Multi-drop Ethernet runs can be replaced with a secure local wireless network, significantly reducing installation and wiring costs.

Selection Guide

DIRIS Digiware D

Multi-point display and communication gateway

DIRIS Digiware D-50/D-70

Function

DIRIS Digiware D-50 and D-70 remote displays allow local visualization of measurements from DIRIS Digiware modules, and centralize the 24 VDC power supply and communication bus to a single device.

The D-50 and D-70 displays also act as the Ethernet gateway for all slave devices connected on the Digiware and RS485 bus.

The D-50 and D-70 displays offer a wide range of functionalities, including:

- memory extension for connected devices
- automatic export of logged consumption and data via MQTT or FTP(S).
- notification emails if there is an alarm on one of the connected devices (SMTPS)
- automatic time synchronization of all connected devices via SNTP.

Advantages

Plug & Play

- Direct Digiware and RS485-to-Ethernet gateway.
- Automatic detection of connected devices.
- Easy setup.
- Safety Extra-Low Voltage 24 VDC power supply.

Multi-circuit

- One display to visualize measurements from up to 196 circuits.
- Quick access button to easily scroll through the different circuits.

Embedded webserver

WEBVIEW-M is embedded in the D-70 display to visualize measurements and consumptions remotely on a web-browser and without any license fees.

Cybersecurity

D-50 and D-70 displays include advanced cybersecurity features in compliance with IEC 62443 for secure data transmission and reduce the risk of cyberattacks:

- Customized security policy (blocking or restricting certain protocols and services);
- HTTPS secured navigation using TLS/SSL certificates;
- Secured data exports (FTPS, MQTT, SMTPS);
- Firewalls and whitelist protocols to guard against denial-of-service attacks.

Advanced connectivity

The D-50/D-70 displays communicate measurement data to any BMS/SCADA system using multiple protocols: Modbus RTU, Modbus TCP, BACnet IP and SNMP v1, v2, v3 (encrypted).

DIRIS Digiware	D-50	D-70
Digiware Bus	•	•
RS485	Configurable as Modbus Master or Slave	Configurable as Modbus Master or Slave
Ethernet	Modbus TCP BACnet IP SNMP MQTT, FTP(S) (data export) SMTP(S) (email notification) SNTP (time synchronization)	Modbus TCP BACnet IP SNMP MQTT, FTP(S) (data export) SMTP(S) (email notification) SNTP (time synchronization)
Webserver	WEB-CONFIG	WEBVIEW-M

Functions

WEBVIEW-M

Embedded web server in the DIRIS Digiware D-70 display

WEBVIEW-M allows the display and remote monitoring of all the electric parameters measured by up to 32 devices. They are displayed in the form of overview screens, graphs or tables for clear and user-friendly analysis.

Access to WEBVIEW is made by a web browser on a PC or tablet and offers multiple features such as the automatic export of data via FTPS or e-mail notification in the presence of alarms (SMTPS).

The Photoview application displays measurements on a customized background picture such as a one-line diagram, an electrical panel, or a site map.

Accessories

DIN rail mounting kit

The accessory allows you to install the DIRIS Digiware D-50/D-70 display on a DIN rail.

This kit is not included with the displays and must be ordered separately.

DIRIS Digiware D

Multipoint display and communication gateway

Dimensions (in/mm)

DIRIS Digiware D-50/D-70

DIRIS Digiware C-31

Power Supply Sizing

Device consumption

Product	Power delivered (W)	Power consumed (W)
Power supply		
P15 100-240 VAC / 24 VDC	15	
P30 100-240 VAC / 24 VDC	20	
Digiware Bus cables		
164 feet / 50 meter package		1.5
System interfaces		
DIRIS Digiware D-50/D-70		2.5
DIRIS Digiware C-31		0.8
Voltage modules		
DIRIS Digiware U-xx		0.72
DIRIS Digiware U-3xdc		0.6
Current modules		
DIRIS Digiware I-3x		0.52
DIRIS Digiware I-4x		1.125
DIRIS Digiware I-6x		0.7
DIRIS Digiware I-3xdc (+ 3 DC current sensors)		2
DIRIS Digiware S-xx		0.35
DIRIS Digiware BCM		1.25
Input/output modules		
DIRIS Digiware IO-10/IO-20		0.5
Repeater		
DIRIS Digiware C-32		1.5

Calculation rules for the max. number of products on the Digiware Bus

The total power consumed by the equipment connected to the Digiware Bus must not exceed the power delivered by the 24 VDC supply.

The power supply must not exceed 20 W/168°F/70°C or 27 W/104°F/40°C.

Size with P15 power supply (ref: 4829 0120) delivering 15 W

For example, it is possible to use

- 1 DIRIS Digiware D-50 display (2.5 W)
- 1 DIRIS Digiware voltage module U-xx (0.72 W)
- 164 feet / 50 meters of cable (1.5 W)

and

- 19 DIRIS Digiware current modules I-3x (19 x 0.52 = 9.9 W)
⇒ Total power = 14.845 W

or

- 9 DIRIS Digiware current modules I-4x (9 x 1.125 = 10.125 W)
⇒ Total power = 14.345 W.

Size with a 24 VDC power supply delivering a maximum of 20 W

(Power supply P30 ref: 4729 0603)

For example, it is possible to use

- 1 DIRIS Digiware D-50 display (2.5 W)
- 1 DIRIS Digiware voltage module U-xx (0.72 W)
- 164 feet / 50 meters of cable (1.5 W)

and

- 29 DIRIS Digiware current modules I-3x (29 x 0.52 = 15.1 W)
⇒ Total power = 19.82 W

or

- 13 DIRIS Digiware current modules I-4x (13 x 1.125 = 14.63)
⇒ Total power = 19.35 W.

Repeater

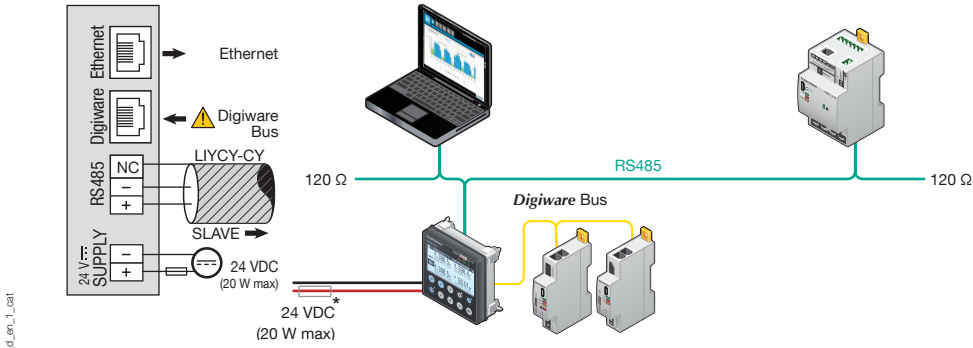

Whenever the power consumption is higher than 20 W or the distance is greater than 328 ft / 100 m, a DIRIS Digiware C-32 repeater is required.

In a DIRIS Digiware system, a maximum of 2 repeaters may be used.

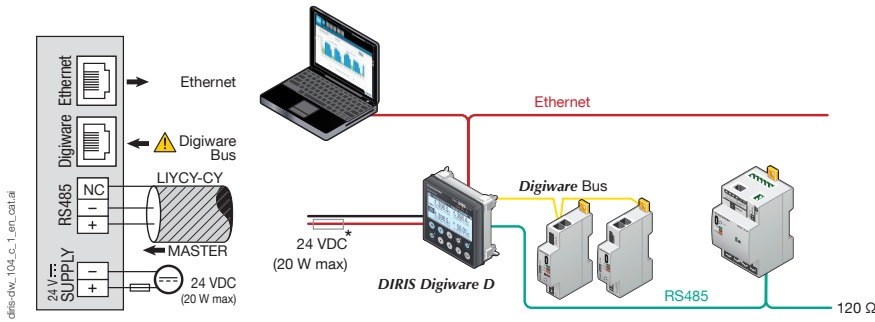

Connections

RS485 slave mode

(*) 1 A / 24 VDC fuse protection is recommended if the 24 VDC power supply is not provided by Socomec.

RS485 master mode

(*) 1 A / 24 VDC fuse protection is recommended if the 24 VDC power supply is not provided by Socomec.

DIRIS Digiware D

Multipoint display and communication gateway

Technical characteristics

Mechanical characteristics

Type of screen	Capacitive touch-screen technology, 10 keys
Screen resolution	350 x 160 pixels
Ingress Protection	IP65, front face

Electrical characteristics

Power supply	24 VDC \pm 10% - 20 W max
Power consumption	2.5 VA
Battery lifetime	10 years
Connection	Removable screw terminal block, 2 positions, AWG 16 ... AWG 24 or 0.25 ... 1.5 mm ² stranded or solid cable

Environmental characteristics

Storage temperature	-13 ... +158 °F / -25 ... +70 °C
Operating temperature	+14 ... +131 °F / -10 ... +55 °C
Humidity	0% to 97% RH / +131°F/+55°C, non condensing
Operating altitude	≤ 6560 ft / 2000 m

Communication characteristics

Digiware Bus	
Connection type	Socomec RJ45 cable
Function	Proprietary bus connecting Digiware units
RS485	
Connection type	Half-Duplex, 2-3 wires
Protocol	Modbus RTU, configurable as Master or Slave
Baudrate	9600 bds (max. 10 devices) 38400 bds - 115200 bds (max. 32 devices)
Ethernet	
Connection type	RJ45 10/100 Mbps
Protocol	Modbus TCP/IP, BACnet IP, SNMP v1, v2, v3, HTTP(S), FTP(S), SMTP(S), MQTT
USB	
Connection type	USB Type Micro-B
Protocol	Modbus RTU over USB
Function	Firmware upgrade and configuration

Expert Services

Our service engineers are an essential part of our team, and they are dedicated to ensuring your power monitoring system provides accurate and reliable measurements to your EPMS software or SCADA system.

Our services include:

- > Site audits to verify the proper wiring of your system
- > Personnel training on how to configure, operate and maintain power monitoring equipment and associated software
- > Remote and on-site commissioning to ensure that your system is up and running quickly, with peace of mind.

For further information, please contact your nearest SOCOMEC branch.

DIRIS Digiware M

Multi-protocol communication gateway

DIRIS Digiware M-50 - M-70

Function

The **DIRIS Digiware M-50 and M-70** communication gateways are the access point for the DIRIS Digiware system, centralizing the 24 VDC power supply and communication to a single device.

The M-50 and M-70 act as the Ethernet gateway for all the devices connected on the Digiware or RS485 bus, and integrate a web server to configure the network parameters and to remotely display measurement data.

Advantages

Plug & Play

- Direct Digiware and RS485 to Ethernet gateway.
- Automatic detection of connected devices.
- Easy setup.
- Safety Extra-Low Voltage 24 VDC power supply.

Advanced connectivity

- Ethernet output for communication using multiple protocols: Modbus TCP, BACnet IP and SNMP v1, v2, v3 (encrypted) to suit any metering and power monitoring application.
- Possible to configure as RS485 slave, for example to communicate measurement data to a second PLC.
- IoT MQTT data push to simplify integration to third-party EMS/BMS

The M-50 and M-70 gateways offer a wide range of functionalities, including:

- memory extension for connected devices
- automatic export of logged consumption and data via MQTT or FTP(S).
- notification emails if there is an alarm on one of the connected devices (SMTPS)
- automatic time synchronization of all connected devices via SNTP

Embedded web server

WEBVIEW-M embedded in the M-70 and available without license fees, allows users to visualize and analyze real-time and logged data due to graphical tools that are user-friendly and easily accessible to all.

Cyber security

M-50 and M-70 gateways include advanced cybersecurity features in compliance with IEC 62443 for secure data transmission and reduce the risk of cyberattacks:

- Customized security policy (blocking or restricting certain protocols and services);
- HTTPS secured navigation using TLS/SSL certificates;
- Secured data exports (FTPS, MQTT, SMTPS);
- Firewalls and whitelist protocols to guard against denial-of-service attacks.

Webserver	WEB-CONFIG	WEBVIEW-M

Architecture

diris-dvw_109_a_us#

Embedded webserver

WEB-CONFIG (M-50)

The M-50 gateway includes a WEB-CONFIG allowing you to:

- configure the device hierarchy and data access
- block or restrict access to certain peripherals, protocols or services

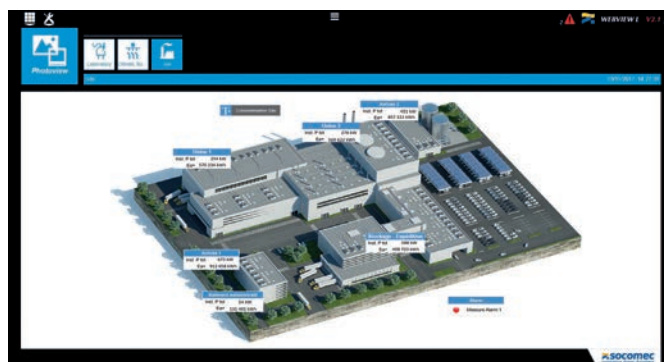

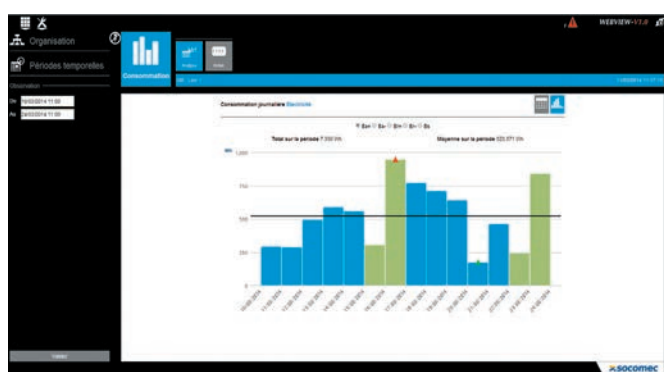

WEBVIEW-M (M-70)

In addition to the WEB-CONFIG, the M-70 gateway allows a remote visualization of data on the embedded WEBVIEW-M software, available without license fees.

- Real-time measurements
- On-going and terminated alarms
- Consumption curves and load curves per load or usage
- Photoview: displays electrical parameters on a customized background such as a site map, an electrical diagram or a panel picture to provide an overview of your electrical installation

Data logging

The M-70 gateway extends the memory of connected devices so you can log a year's worth of measurements, load curves and consumption curves.

Power Supply Sizing

Device consumption

Calculation rules for the max. number of devices on the Digiware bus

The total power consumed by the devices connected to the Digiware bus must not exceed the power from the 24 VDC supply.
The power supply must not exceed 20 W / 158 °F / 70 °C or 27 W / 104 °F / 40 °C.

Size with P15 power supply (ref. 4829 0120) delivering 15 W

For example, it is possible to use

- 1 DIRIS Digiware M-50 gateway (2.5 W)
- 1 DIRIS Digiware voltage module U-xx (0.72 W)
- 164 ft / 50 m of cable (1.5 W)

and

- 29 DIRIS Digiware current modules S-xx (29x 0.35 = 10.15 W)
⇒ Total power = 14.87 W

or

- 9 DIRIS Digiware current modules I-4x (9 x 1.125 = 10.125 W)
⇒ Total power = 14.845 W.

Size with a 24 VDC power supply delivering a maximum of 20 W (P30 ref. 4729 0603)

Possible options include:

- 1 DIRIS Digiware M-50 gateway (2.5 W)
- 1 DIRIS Digiware voltage module U-xx (0.72 W)
- 164 ft / 50 m of cable (1.5 W)

and

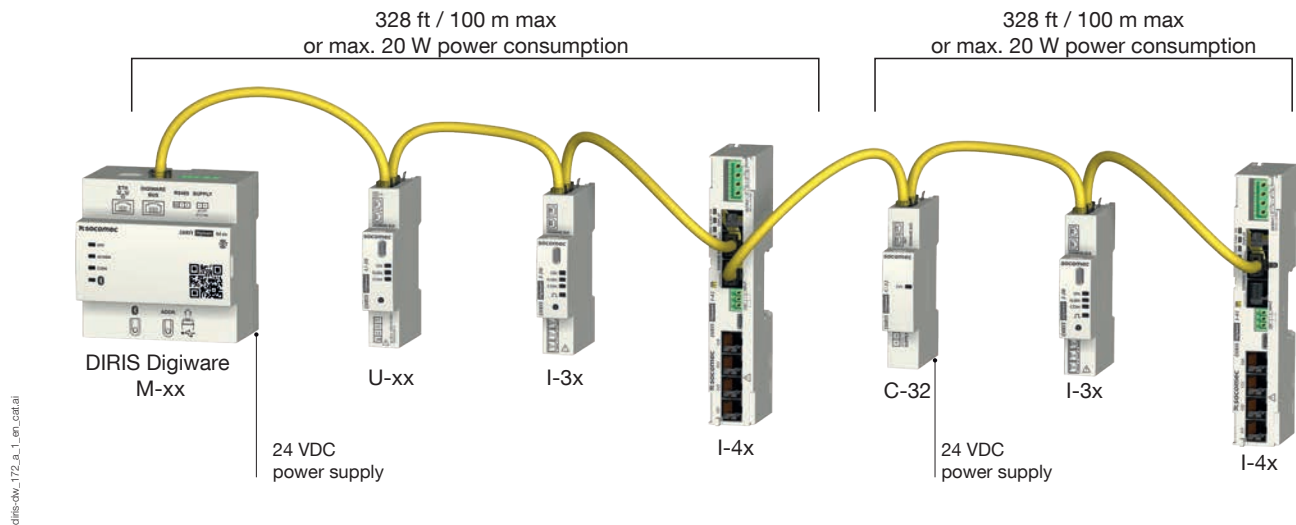

- 29 DIRIS Digiware current modules I-3x (30 x 0.52 = 15.08 W)
⇒ Total power = 19.8 W

or

- 14 DIRIS Digiware current modules I-4x (13 x 1.125 = 15.72)
⇒ Total power = 19.345 W.

Repeater

With power consumptions higher than 20 W or distances greater than 328 ft / 100 m, a DIRIS Digiware C-32 repeater is required.
In a DIRIS Digiware system, a maximum of 2 repeaters may be used.

DIRIS Digiware C-31

Control and power supply interface

DIRIS Digiware C-31

Function

For applications without a local display, the DIRIS Digiware C-31 interface centralizes the measurements from your Digiware system and communicates data to any external software or PLC via Modbus over RS485. The DIRIS Digiware C-31 interface is supplied with 24 VDC.

Advantages

Compact

Centralize your measurement data on a single module without a local screen, for a complete system:

- Single 24 VDC power supply
- A single RS485 Modbus communication interface

24 VDC Safety Extra Low Voltage power supply

- No dangerous voltage
- The power supply feeds the entire system through the Digiware bus

1/2 day on-site commissioning	On-site commissioning including installation verification, programming and communication testing	9230100004

Expert Services

Our service engineers are an essential part of our team, and they are dedicated to ensuring your power monitoring system provides accurate and reliable measurements to your EPMS software or SCADA system.

Our services include:

- > Site audits to verify the proper wiring of your system
- > Personnel training on how to configure, operate and maintain power monitoring equipment and associated software
- > Remote and on-site commissioning to ensure that your system is up and running quickly, with peace of mind.

For further information, please contact your nearest SOCOMEC branch.

DIRIS Digiware U

Voltage measurement module

DIRIS Digiware U-10/U-30

Function

The **DIRIS Digiware U** module is designed to accurately measure voltage for the entire DIRIS Digiware system.

The Digiware RJ45 Bus facilitates the transmission of voltage measurements, power supply, and communication to all connected Digiware modules.

Advantages

Safe

No hazardous voltage on panel doors, as the DIRIS Digiware U module is DIN rail mounted inside the electrical panel.

Flexible

Compatible with all electrical service types up to 520 VAC L-L:

- single phase
- two-phase (with or without neutral)
- three-phase (with or without neutral)

Compact for multi-circuit applications

- A single voltage reference point for the entire DIRIS Digiware system
- Eliminates the need for redundant protective devices, a single protection is needed for the entire system

Comprehensive

A complete solution for metering, monitoring and power quality analysis of the supplied voltage.

The solution for

- > Industry
- > Building
- > Infrastructures
- > Data center

Strong points

- > Safe
- > Compact
- > Flexible
- > Comprehensive

DIRIS Digiware S

Current measurement module with integrated sensors

DIRIS Digiware S

Function

DIRIS Digiware S current acquisition modules have 3 integrated current sensors for measuring, monitoring, and analyzing electrical circuits up to 63 A.

Positioned directly downstream protective devices, they offer exclusive technologies: VirtualMonitor which provides real time status of protective devices (ON/OFF/TRIP).

AutoCorrect which detects wiring errors even under no load-conditions, and enables software correction without the hassle of reworking the physical wiring.

Multiple DIRIS Digiware S modules can be daisy chained by simply clicking in an RJ45 cable. This allows great flexibility to the user who wishes to add more metering points in the future.

Advantages

Plug & Play

- Save wiring time: the current sensors are integrated in the module
- Quick RJ45 connection between modules
- Direct mounting, upstream or downstream of the protective device

Multi-circuit

Multiple DIRIS Digiware S modules can be daisy chained to monitor multiple loads

Compact

- The best compactness/performance ratio on the market
- Current inputs spaced at 3/4" center intervals, aligning perfectly with protective devices

Accurate

- Class 0.5 for active energy (kWh) from 2 - 120% of nominal current

Integrated technologies

For more information see our website www.socomec.us

Create your project

- > Find the best DIRIS Digiware configuration:
www.meter-selector.com

Function

The DIRIS Digiware BCM is a multi-circuit metering strip with 21 integrated sensors and allows individual circuit monitoring within any of any electrical panelboard (Remote Power Panel, lighting panel, power panel etc.). The DIRIS Digiware BCM is also equipped with three RJ12 channels connected to TE/TR/ITR/TF current sensors and ΔIC zero sequence CTs.

Advantages

3x quicker to install than standard solutions

- The integrated current sensors do not require any wiring: they are directly integrated to the BCM meter strip.
- Quick RJ45 connection between modules.
- RJ12 connection for external current sensors.
- AutoCorrect technology detects wiring errors, even off-load.

2x quicker to configure than standard solutions

Easy Config System Software - free of charge – enables the configuration of multiple identical panels with a “duplication” function and also provides time-saving configuration templates enabling the initial design to be adapted with ease.

Minimal footprint

- No additional CT leads required - and therefore less cabling required.
- VirtualMonitor technology indicating breaker status eliminates the need to install auxiliary contacts.
- Connection to TE/TR/ITR/TF current sensors and ΔIC zero sequence CTs to mutualize power metering and earth leakage monitoring.

Maximum reliability

- A robust protective plastic cover safeguards the electronic components and reduces the risk of breakage. By not simply being an exposed PCB, the unit can, therefore, be handled manually.
- PreciSense technology ensures accurate and reliable measurements over a wide measurement range: class 0.5 accuracy for active energy according to IEC 61557-12 and ANSI C12.20 standards.
- Integrated VirtualMonitor technology to access individual breaker status remotely and in real-time.

General Characteristics

- 21 integrated current sensors.
- Measures up to 120 A.
- 3/4-in and 1-in pitch versions
- Configurable as 21 single-phase circuits, 7 three-phase circuits or a mix of single-phase, two-phase and three-phase circuits.

DIRIS Digiware I

Current acquisition module

Function

DIRIS Digiware I are DIN-rail mounted power monitoring modules. Associated with DIRIS Digiware U modules, they measure and monitor electrical parameters such as powers, energies and power quality of electrical installations.

The modularity, along with the RJ45 Digiware Bus provides a unique multi-circuit and scalable approach. Adding DIRIS Digiware I modules to the bus is done simply by clicking in an RJ45 cable. This allows great flexibility to users who wish to add more metering points in the future.

The RJ12 current inputs allow a quick and error-free connection to current sensors (TE, TR/iTR, TF) with automatic detection of the type and rating of the current sensors connected. This ensures reliable and accurate measurements at all times.

Advantages

Multi-circuit

- One module can monitor up to 2 three-phase circuits.
- Up to 31 current measurement modules can be added to the Digiware Bus, allowing to monitor a large number of circuits within the same DIRIS Digiware system.

Plug & Play

- RJ45 cables for a quick and easy connection of modules.
- Color-coded RJ12 cables to connect current sensors, quickly, safely and without errors.
- Load type, current sensor type and rating are automatically detected.
- When connected to iTR current sensors, the AutoCorrect technology detects and corrects wiring errors, making the system more reliable.

Accurate

- Compliant with standard IEC 61557-12, guaranteeing the quality and accuracy of measurements:
- class 0.5 from 2 - 120% In for the global measurement chain (including TE/ iTR/TF current sensors)
- class 1 from 2 - 120% In for the global measurement chain (including TR current sensors)

Flexible

- Modules available in 3, 4 or 6 current sensor inputs.
- The types of current modules can be mixed within the Digiware system, to monitor a variety of single-phase, two-phase and three-phase circuits.

Accessories

Digiware plug-in connector

With the Digiware plug-in connector you can disconnect a DIRIS Digiware module from the Digiware bus while ensuring the DIRIS Digiware system continues to run downstream.

This accessory is particularly useful in applications with retractable drawers or critical applications such as data centers with busway systems.

Dimensions (in/mm)

DIRIS Digiware I-3x / I-6x

DIRIS Digiware I-4x

Current sensors

Various types of current sensors can be connected to the DIRIS Digiware I: Solid-core TE, split-core TR/TR, flexible TF current sensors. This range of sensors can be adapted to all types of new or existing installations. A rapid RJ12 connection makes wiring easy and reliable and prevents wiring errors. The DIRIS Digiware I meter module automatically recognizes the type of sensor used and its current rating. This guarantees the accuracy of the overall measurement chain (DIRIS Digiware I + current sensors).

For more information see "TE, TR and TF sensors" pages.

Expert Services

Our service engineers are an essential part of our team, and they are dedicated to ensuring your power monitoring system provides accurate and reliable measurements to your EPMS software or SCADA system.

Our services include:

- > Site audits to verify the proper wiring of your system
- > Personnel training on how to configure, operate and maintain power monitoring equipment and associated software
- > Remote and on-site commissioning to ensure that your system is up and running quickly, with peace of mind.

For further information, please contact your nearest SOCOMEC branch.

DIRIS Digiware IO

Digital and analog input/output module

DIRIS Digiware IO-10
4 digital inputs/2 digital outputs

DIRIS Digiware IO-20
2 analog inputs

Configuration with Easy Config System

Function

DIRIS Digiware IO modules give more versatility to the DIRIS Digiware system.

- DIRIS Digiware IO-10 modules have 4 digital inputs and 2 digital outputs. The digital inputs can be used to monitor the status of third-party devices such as the physical position of a protective device (ON/OFF, trip), or to collect and count pulses from multi-utility meters. The digital outputs allow the remote control of protective devices by sending a binary output signal. Alarms from other DIRIS Digiware modules (U, I, S etc.) can be assigned to the IO-10's digital outputs to send signals upon specific conditions (high measurement for example) for additional actions and visibility.
- DIRIS Digiware IO-20 modules have 2 analog inputs used to collect analog signals from external sensors (pressure, humidity, temperature...).

Advantages

Plug & Play

The DIRIS Digiware IO modules can be easily added anywhere within the DIRIS Digiware system thanks to a quick RJ45 connection.

Multifunction

The addition of DIRIS Digiware IO-10/IO-20 modules makes DIRIS Digiware the most comprehensive and versatile power monitoring ecosystem in the market, reducing the need to source third-party equipment.

Connected

All the collected information is accessible from the displays, from WEBVIEW or can be communicated to any other centralized management software.

Compact

The modular format allows the quick connection of a large number of IO-10 and IO-20 modules.

DIRIS Digiware Udc

DC voltage measurement module

DIRIS Digiware U-31dc/U-32dc

DIRIS Digiware U500dc/U1000dc/U1500dc adaptor

Configuration with Easy Config System

Function

The **DIRIS Digiware U-3xdc** module measures DC voltage for the entire system. It measures up to 180 VDC with a direct connection and is therefore compatible with typical nominal voltages (24 VDC, 48 VDC, etc.). The voltage adaptors make the system compatible with all voltage levels up to 1650 VDC to respond to the needs of all applications. The RJ45 Digiware Bus transmits voltage measurements along with power supply and communication to all connected products.

Advantages

Single voltage measurement

- Single voltage measurement point for the entire system.
- Single point of protection for the voltage measurement.
- No hazardous voltage on panel doors.

Flexible

- The voltage adaptors make the measurement system compatible with all DC electrical networks.

Plug & Play

- Easy to configure from DIRIS Digiware D interfaces or from the Easy Config configuration software.

The solution for

- > Telecommunication
- > Renewable power
- > Transportation
- > Data center

DIRIS Digiware *Idc*

Direct current measurement module

DIRIS Digiware I-30dc/I-35dc

Function

DIRIS Digiware *Idc* modules measure consumption and monitor the DC electrical installation. Several of these modules can be used within the same system, allowing the measurement of a large number of DC circuits. They are powered with DIRIS Digiware Udc voltage measurement modules.

Direct current is measured using external sensors connected by RJ12-Molex cables, available in multiple lengths. These cables are color coded (brown, orange, white) to easily identify circuits. The associated DIRIS Digiware D screen and the embedded webserver Webview can display electrical measurements from both DIRIS Digiware AC and DC systems simultaneously.

Advantages

Multi-circuit

- Measurement of up to 3 DC circuits per *Idc* module.
- Multiple *Idc* modules can be connected together which allows the measurement of a large number of DC loads simultaneously.

Flexible

- Adapted to suit metering and quality analysis of the direct current.
- A complete range of solid core and split core DC current sensors from 16 to 6000 A.

Plug & Play

- Quick RJ45 connection between modules and RJ12-Molex to current sensors.
- Easy to configure from DIRIS Digiware D interfaces or from the Easy Config System.

Compact

3 DC meters combined in a single module, just 18mm (0.71in) wide, to address space constraints inside electrical panels.

Current sensors

DC current is measured by external sensors connected to the DIRIS Digiware I-3xdc modules via RJ12-Molex cables. Connection of the current sensors is quick and error free. A wide range of current sensors is available from Socomec to suit all installations and applications including split-core current sensors for retrofit applications.

- Open-loop Hall effect sensors
- Solid core or split core.
- Power supply voltage: ± 15 V.
- Power supply current: ± 25 mA depending on sensor.
- Output voltage: ± 4 V.
- 4-point male Molex terminal strip.
- Measuring range: 16 to 6000 A.
- Category III overvoltage.

DC load

Technical characteristics

Measurement characteristics

Number of current inputs	3
Associated current sensors	Open-loop Hall effect
Current measurement accuracy	Class 0.5
Precision measurement of power and energy	With U-31dc/U-32dc only: class 1 With U-32dc + adaptor: class 2
Connection	Specific Socomec cable with RJ12-Molex connectors
Power consumption	2 VA

Mechanical characteristics

Mounting	DIN-rail or back plate
Protection degree	IP20, front face
Weight	2.43 oz / 69 g

Environmental characteristics

Operating temperature	+14 °F ... +158 °F / -10 ... +70 °C
Storage temperature	-4 °F ... +158 °F / -20 ... +70 °C
Operating humidity	0% to 97% RH / 131 °F / 55 °C, non condensing
Operating altitude	≤ 6560 ft / 2000 m

Communication characteristics

USB	
Connection type	USB Type Micro-B
Protocol	Modbus RTU over USB
Function	Firmware upgrade and configuration
Digiware bus	
Connection type	Socomec RJ45 cable
Function	Proprietary bus connecting Digiware units

Expert Services

Our service engineers are an essential part of our team, and they are dedicated to ensuring your power monitoring system provides accurate and reliable measurements to your EPMS software or SCADA system.

Our services include:

- > Site audits to verify the proper wiring of your system
- > Personnel training on how to configure, operate and maintain power monitoring equipment and associated software
- > Remote and on-site commissioning to ensure that your system is up and running quickly, with peace of mind.

For further information, please contact your nearest SOCOMEC branch.

DIRIS A-100 / A-200

Power quality meter - panel mounted

Works with RJ12 or 333 mV current sensors

Function

The **DIRIS A-100 / A-200** are panel-mounted power quality meters that can communicate either via MODBUS RTU over RS485, MODBUS TCP and BACnet IP over Ethernet. The 4 independent current inputs allow to manage several types and numbers of circuits. The DIRIS A-100 / A-200 are compatible with all types of current sensor technologies: solid-core, split-core and Rogowski coil sensors to match any project requirements and installation constraints.

Advantages

Universal

The DIRIS A-100/A-200 is an all-in-one power quality meter providing a cost-effective answer to all application requirements:

- Native RS485 and dual Ethernet communication and digital inputs/outputs, eliminating the need for additional optional modules.
- Universal power supply 115 - 600 VAC.
- Wide range voltage service monitoring 90 - 690 VAC direct without using potential transformers.
- Compatible with any third party 333mV Current Transformers.

Plug & play

- Unique RJ12 technology provides a quick and reliable connection of current sensors to the power meter.
- Using mV output CTs means that no shorting blocks are needed.
- Fast and simple setup thanks to the screen's Configuration Wizard.
- Easy Config System is a free configuration software that allows you to create and save configuration templates which can later be uploaded to other A-100/A-200.
- Smart monitoring of protective devices with VirtualMonitor technology - without the need for auxiliary contacts or extra wiring.

Fully customizable

- Upload your own brand logo to customize the screen and embedded webserver.
- Creation of rolling favorite screens to display the measurement datasets that matter most to you.

Advanced features

- Waveform capture automatically triggered by power quality events to rapidly identify disturbances.
- Time of Use calendar configuration (up to 4 seasons and 4 tariffs) to align consumptions with any local utility contract.
- Ground leakage current monitoring, with alarm thresholds for preventative maintenance and quick remedial action.

Better than revenue grade

PreciSense technology provides industry leading accuracy which exceed revenue grade standards, for reliable and repeatable measurements under all conditions:

- Class 0.1 for the meter alone according to ANSI C12.20 and IEC 61557-12 standard.
- Class 0.5 from 2% to 120% of the CT rating for the global measurement chain (with TE/TR/TF/ACTL-1250 current sensors).

The solution for

- > Data center
- > Industry
- > Building

Strong points

- > Universal
- > Plug & play
- > Fully customizable
- > Advanced features
- > Better than revenue grade

Conformity to standards

- > UL 61010-1
CSA-C22.22
No. 61010-1
Guide FTRZ/PICQ
File E257746

- > ANSI C12.20

- > PBI Meter per CA Energy Commission

- > IEC 61557-12

- > IEC 62053-21 -24

DIRIS A-100 / A-200

Power quality meter - panel mounted

Works with RJ12 or 333 mV current sensors

Functions

Monitoring

- Real-time visualization of all electrical parameters, available under several formats (bar graphs, tables)
- Phasor diagram to identify potential CT wiring errors

Consumption curves

- Recording of active (kWh), reactive (kvarh) and apparent (kVAh) energies
- Graphical view of monthly, weekly, daily or hourly energy consumptions to detect drifts

Time of Use

- Custom calendar management
- Energy consumption displayed according to the utility's daily rates, weekdays, seasons and holiday schedules

Measurement history

- History of all electrical parameters (V, I, P, Q, S, THD etc.)
- Time period selection (year, month, day etc.)
- Easy correlation, by displaying multiple parameters on the same graph

Alarms & Events

- View active alarms and power quality events
- Access to details (duration, amplitude etc.)
- Log of finished alarms & events

Waveform

- Automatic waveform captures following power quality events
- Waveform picture and samples can be downloaded from the webserver

Dimensions (in/mm)

DIRIS A-100 / A-200

Power quality meter - panel mounted

Works with RJ12 or 333 mV current sensors

Current sensors

The DIRIS A-100/A-200 supports various types of current sensors including smart RJ12 solid-core (TE), split-core (TR/iTR), and Rogowski coil (TF) sensors (A-100/A-200 RJ12 models), as well as any 333 mV current sensors (A-100/A-200 333 mV models). Additionally, the DIRIS A-200 RJ12 model (reference 4825 0604) can accommodate zero-sequence $\Delta IC/\Delta IP-R$ CTs for ground leakage monitoring. This versatile range of sensors makes the DIRIS A-100/A-200 suitable for both new and existing installations.

TE solid current sensors

TR/iTR split-core current sensors

TF Rogowski current sensors

333mV current sensors

$\Delta IC/\Delta IP-R$ zero sequence CTs

RJ12 smart current sensors

Current transformers with 333 mV outputs

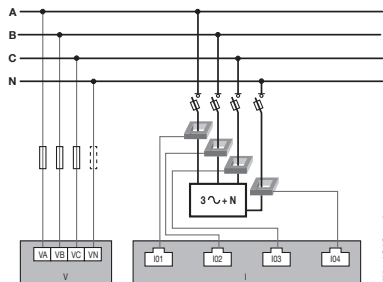

(*) Notes regarding the use of zero sequence CTs:

1. $\Delta IC / \Delta IP-R$ zero sequence CTs for ground leakage monitoring are only compatible with the DIRIS A-200 RJ12 model (part no 48250604).
2. Only one $\Delta IC / \Delta IP-R$ may be connected on the DIRIS A-200 power meter.
3. DIRIS T-10 RJ12 adaptor (part no 48290620) must be used and ordered separately to connect $\Delta IC / \Delta IP-R$ to the DIRIS A-200 power meter.

DIRIS A-100 / A-200

Power quality meter - panel mounted

Works with RJ12 or 333 mV current sensors

Expert Services

Our service engineers are an essential part of our team, and they are dedicated to ensuring your power monitoring system provides accurate and reliable measurements to your EPMS software or SCADA system.

Our services include:

- > Site audits to verify the proper wiring of your system
- > Personnel training on how to configure, operate and maintain power monitoring equipment and associated software
- > Remote and on-site commissioning to ensure that your system is up and running quickly, with peace of mind.

For further information, please contact your nearest SOCOMEC branch.

DIRIS A-40

Multifunction power meter - panel mounted
Works with RJ12 smart current sensors

DIRIS A-40

Configuration
with Easy Config System

Function

The DIRIS A-40 is a panel mounted power monitoring device compatible with TE/TR/ITR/TF smart current sensors, suitable for new or existing electrical installations.

The DIRIS A-40 has 3 native digital inputs and 2 digital outputs for additional versatility and includes RS485 Modbus RTU, Ethernet Modbus TCP and BACnet IP, and Profibus DP communication to report measurements to external management systems.

Advantages

Plug & Play

- Color-coded RJ12 cables for easy phase identification when wiring current sensors to the DIRIS A-40.
- Automatic detection of current sensor type and rating.
- Using low-voltage mV current sensors, no shunting blocks are needed, they can be disconnected safely under load.

Smart sensors

Three current sensor formats (solid-core TE, split-core TR/ITR and Rogowski coil TF) allow integration of the DIRIS A-40 into new and existing electrical installations.

Assisted configuration

A configuration wizard guides the user in a step by step process to configure the DIRIS A-40 directly from the screen. It also detects and corrects configuration errors which cuts the commissioning time in half and always delivers a reliable result.

Better than revenue grade

Compliant with the IEC 61557-12 standard, guaranteeing the quality and accuracy of the Power Meter:

- Class 0.2 for the meter alone.
- Class 0.5 from 2% to 120% of the rated current, for the global measurement chain (with TE/ITR/TF current sensors).

The solution for

- > Industry
- > Building
- > Infrastructure
- > Data center

Strong points

- > Plug & Play
- > Assisted configuration
- > Smart sensors
- > Better than revenue grade

Current sensors

Associated current sensors

Various types of current sensors can be connected to the DIRIS A-40: solid-core (TE), split-core (TR/iTR) or Rogowski (TF). This range of sensors is suitable for all types of new or existing installations. A quick RJ12 connection makes wiring easy and reliable and prevents wiring errors. The DIRIS A-40 automatically recognizes the sensor type and rating. This guarantees the accuracy of the overall measurement chain (DIRIS A-40 + current sensors).

For more information on TE, TR/iTR, TF current sensors, refer to pages 348-355.

Works with RJ12 smart current sensors

DIRIS A-40 characteristics

Mechanical characteristics

Type of screen	Capacitive touch-screen technology, 10 keys
Screen resolution	350 x 160 pixels
Ingress Protection	IP65, front face

Electrical characteristics

Power supply input	110-277 VAC L-N / 277-400 VAC L-L - CAT III 120-300 VDC - CAT III
Power consumption	5 VA AC / 1.5 VA DC (4825 0500) 8 VA AC / 2.5 VA DC (4825 0501 & 4825 0502)
Connection	Removable screw terminal block, 2 positions, AWG 14 ... AWG 20 / 0.5 ... 2.5 mm ² solid cable or stranded cable with ferrule
Voltage measurement input	50-300 VAC (Ph/N) - 87-520 VAC (Ph/Ph) - CAT III
Electrical Network (Service) type	Single-Phase - Two-Wire, Line-to-Neutral Single-Phase - Two-Wire, Line-to-Line Single-Phase - Three-Wire (Split-Phase) Three-Phase - Three-Wire (Delta) Three-Phase - Four-Wire (Wye)
Frequency range	45 ... 65 Hz
Input consumption	≤ 0.1 VA
Connection	Removable screw terminal block, 4 positions, AWG 14 ... AWG 24 / 0.25 ... 2.5 mm ² solid cable or stranded cable with ferrule

Measuring characteristics

Voltage measurement	
Sampling rate	9.6 kHz
Voltage measurement accuracy	Class 0.2
Frequency measurement accuracy	Class 0.02
Current measurement	
Number of current inputs	3
Associated current sensors	Solid-core TE, split-core TR/ITR, flexible TF current sensors
Connection type	Socomec RJ12 cables
Current measurement accuracy	Class 0.2 DIRIS A-40 alone Class 0.5 with TE, ITR, TF sensors Class 1 with TR sensors

Current measurement

Active Power/Energy accuracy	Class 0.2 DIRIS A-40 alone Class 0.5 with TE, ITR, TF sensors Class 1 with TR sensors
Reactive Power accuracy	Class 1 with TE, ITR, TF sensors Class 2 with TR sensors
Reactive Energy accuracy	Class 2 with TE, TR/ITR, TF sensors

Digital inputs

Number of digital inputs	3
Digital input type	Optocoupler with internal (12 VDC ± 10%) or external (12-24 VDC ± 20%) polarisation
Function	Logical status, pulse meter, multi-tariff
Connection	Removable screw terminal block, 5 positions, stranded or solid AWG 15 to AWG 24 / 0.2 to 1.5 mm ² cable

Digital outputs

Number of digital outputs	2
Relay type	Optocoupler 30 VDC, 20 mA max. - SELV
Function	Manual command, pulse output, load shedding, alarm report
Connection	Removable screw terminal block, 4 positions, stranded or solid AWG 13 to AWG 24 / 0.2 to 2.5 mm ² cable

Communication characteristics

RS485

Connection type	Half-Duplex, 2-3 wires
Protocol	Modbus RTU
Baudrate	9600 bds - 115200 bds

Ethernet

Connection type	RJ45 10/100 Mbs
Protocol	Modbus TCP/IP, BACnet IP, HTTP, FTP, SMTP

USB

Connection type	USB Type Micro-B
Protocol	Modbus RTU over USB
Function	Firmware upgrade and configuration

Environmental characteristics

Storage temperature	-13 to +185 °F / -25 to +85°C
Operating temperature	+14 to +158 °F / -10 to +70°C
Humidity	0% to 97% RH / +131°F/+55°C, non condensing
Operating altitude	≤ 6560 ft / 2000 m

DIRIS B

Multifunction power meter - DIN-rail mounted
Works with RJ12 smart current sensors

DIRIS B-10 / B-30
RS485

Function

The **DIRIS B** is a DIN-rail mounted power monitoring device compatible with TE/TR/iTR/TF smart current sensors, suitable for new or existing electrical installations.

The 4 independent RJ12 current inputs allow the DIRIS B to monitor 1 three-phase circuit and use a dedicated current sensor for the neutral, or 4 single-phase loads.

Advantages

Plug & Play

- Color-coded RJ12 cables for easy phase identification when wiring current sensors to the DIRIS B.
- Automatic detection of current sensor type and rating.
- Using low-voltage mV current sensors, no shorting blocks are needed, they can be disconnected safely under load.

Better than revenue grade

- Class 0.2 DIRIS B meter accuracy according to ANSI C12.20.
- Class 0.5 system accuracy (DIRIS B + TE/iTR/TF current sensors) from 2% to 120% of rated current.

Bi-Directional Metering

The DIRIS B measures the flow of electricity in both directions (import / export).

The DIRIS B has 2 native digital input for additional versatility and includes Modbus RTU serial communication to report measurements to external management systems.

Additional digital & analog input/output modules can extend the basic functional scope of the DIRIS B. An optional display can also be plugged to the meter for local visualization on panel doors.

Multi-circuit

- Four independent current sensor inputs allow you to configure multiple circuits in order to optimize the number of power meters per installation.

Versatile

- The DIRIS B can be connected to:
 - a remote DIRIS D-30 screen for local display of measurement data on the panel door.
 - optional digital or analog input/output modules, as well as temperature input modules.
 - DIRIS Digiware M-50/M-70 gateways for centralization and communication of data via Ethernet. DIRIS Digiware M-70 embeds WEBVIEW-M, a webserver for remote visualization of measurement data.

DIRIS B

Multifunction power meter - DIN-rail mounted

Works with RJ12 smart current sensors

Accessories

DIRIS B sealing cover

- Prevents access to the cabling of the power meter.

USB configuration cable (6.56 ft / 2 m)

- Configuration and firmware upgrade of the DIRIS B power meter can be achieved using Easy Config System via a direct USB connection.

DIRIS D-30 display

DIRIS D-30

Connection

Optional modules

DIRIS O

Optional modules (4 max.)*

- Digital inputs/outputs
- Analog inputs/outputs
- Temperature inputs

* maximum 4 optional modules with maximum 1 temperature module.

DIRIS O-iod

- 2 digital inputs to count pulses from utility meters or to monitor change of status of auxiliary contacts.
- 2 digital outputs can be connected to configurable alarms warning of exceeded thresholds (power, current, etc.) or can be piloted remotely.

DIRIS O-ioa

- 2 analog inputs (4-20 mA) to collect measurements from analog sensors (pressure, humidity, temperature, etc.)
- 2 analog outputs (4-20 mA) to report measurements (power, currents, etc.)

DIRIS O-it

- 3 temperature inputs to be connected to PT100 or PT1000 sensors.
- Ambient air temperature.

DIRIS B

Multifunction power meter - DIN-rail mounted

Works with RJ12 smart current sensors

Current sensors

Associated current sensors

Various types of current sensors can be connected to the DIRIS B: Solid-core TE , split-core TR/ITR , flexible TF current sensors. This range of sensors can be adapted to all types of new or existing installations. A rapid RJ12 connection makes wiring easy and reliable and prevents wiring errors. The DIRIS B automatically recognizes the type of sensor used and its current rating. This guarantees the accuracy of the overall measurement chain (DIRIS B + current sensors).
For more information on TE, TR/ITR, TF current sensors, refer to pages 348-355.

DIRIS B

Multifunction power meter - DIN-rail mounted

Works with RJ12 smart current sensors

DIRIS B characteristics

Electrical characteristics	
Auxiliary power supply	
AC voltage	110-230 VAC $\pm 15\%$ (Ph/N ou Ph/Ph) Cat III
Frequency	50/60 Hz
Consumption	< 2 VA without display < 6 VA with display
Connection	Removable spring-cage terminal, 2 x 2 positions, AWG 10 ... 24 / 0.5 ... 2.5 mm ² solid cable or AWG 15 ... 30 / 0.25 ... 1.5 mm ² stranded cable with ferrule
Measurement characteristics	
Energy and power measurement	
Accuracy	Class 0.2 DIRIS B alone
Active energy and active power	Class 0.5 with TE, iTR or TF current sensors
	Class 1 with TR current sensors
Accuracy Reactive energy	Class 2 with TE, TR/iTR or TF current sensors
Power factor measurement	
Accuracy	Class 0.5 with TE, iTR or TF current sensors
	Class 1 with TR current sensors
Voltage measurement	
Voltage range	50-300 VAC (Ph/N) - 87-520 VAC (Ph/Ph) - CAT III
Frequency range	45 ... 65 Hz
Frequency accuracy	Class 0.02
Electrical Network type	Single-phase / Two-phase / Two-phase with neutral / Three-phase / Three-phase with neutral
Measurement by voltage transformer	Primary: 400 000 VAC Secondary: 60, 100, 110, 173, 190 VAC
Input consumption	≤ 0.1 VA
Permanent overload	300 VAC Ph/N
Voltage measurement accuracy	Class 0.2
Connection	Removable spring-cage terminal, 2 x 6 positions, AWG 10 ... 24 / 0.5 ... 2.5 mm ² solid cable or AWG 15 ... 30 / 0.25 ... 1.5 mm ² stranded cable with ferrule
Current measurement	
Number of current inputs	4
Associated current sensors	Solid-core TE , split-core TR/iTR , flexible TF current sensors
Accuracy	Class 0.2 DIRIS B alone
	Class 0.5 with TE, iTR or TF current sensors
	Class 1 with TR current sensors
Connection	Specific Socomec RJ12 cables
Input characteristics	
Number	2
Type / Power supply	Optocoupler internal polarisation (12 VDC $\pm 10\%$) or external polarisation (10-30 VDC $\pm 10\%$)
Input function	Logic status, pulse meter or synchronization pulse status (input 1)
Communication characteristics	
RS485	
Link	RS485
Connection type	Half-Duplex, 2 wires
Protocol	Modbus RTU
Speed	1200 ... 115200 bauds
USB	
Protocol	MODBUS RTU over USB
Function	Configuration of DIRIS Digiware modules
Connection	Micro-B type USB connector
Environmental characteristics	
Operating temperature	+14 ... +158 °F / -10 ... +70 °C
Storage temperature	-13 ... +185 °F / -25 ... +85 °C
Operating humidity	131 °F / 55 °C / 97% relative humidity
Operating altitude	≤ 6560 ft / 2000 m
Vibration	1G from 10 to 100Hz

DIRIS D-30 display characteristics

Mechanical characteristics	
Screen type	Capacitive touch-screen technology, 10 keys
Screen resolution	350 x 160 pixels
Degree of protection	IP65 (front face)
Single product connection	
RJ9	Self-supply and data
Micro-B USB	Firmware Upgrade
Environment	
Storage temperature (°C)	-4 ... +158 °F / -20 ... +70°C
Operating temperature (°C)	-4 ... +158 °F / -20 ... +70°C
Humidity	95 % at 104 °F / 40°C
Installation category	CAT III
Degree of pollution	2

DIRIS O optional modules characteristics

Power supply ⁽¹⁾	
AC voltage	110-230 VAC $\pm 15\%$
Frequency	50/60 Hz

(1) No power supply on DIRIS O-it.

DIRIS O-iod - 2 digital inputs/2 digital outputs	
Number of inputs	2 per optional modules - max. 4 optional modules
Type	Optocoupler internal polarisation (12 VDC $\pm 10\%$) or external polarisation (10-30 VDC $\pm 10\%$)
Function	Logic status or pulse metering
Number of outputs	2 per optional modules - max. 4 optional modules
Type	Relay / 230VAC $\pm 15\%$ - 1 A
Function	Configurable alarm (current, power,...) on threshold overruns or remote controlled status
Inputs/Outputs connection	Removable screw terminal, 4 positions, AWG 15 ... 35 / 0.14 to 1.5 mm ² stranded or solid cable

DIRIS O-ioa - 2 analog inputs/2 analog outputs	
Number of inputs	2 per optional modules - max. 4 optional modules
Type	4-20 mA
Function	Connection of analog sensors (pressure, humidity, temperature...)
Number of outputs	2 per optional modules - max. 4 optional modules
Type	4-20 mA
Function	Transmission of measurement image (current, power...) to PLCs

DIRIS O-it - 3 temperature inputs	
Number of inputs	3 external inputs + 1 measurement for ambient temperature
Dynamic	-4 ... 302 °F / -20 ... 150 °C
Type	PT100 or PT1000

DIRIS A-30

Multifunction power meter - Panel mounted
Works with 5A secondary current transformers

DIRIS A-30

Function

The DIRIS A-30 is a panel mounted multifunction power meter for low voltage electrical installations, compatible with 1A or 5A secondary CTs.

The device is easy to use thanks to its large backlit LCD display and 6 keys used to view readings and to configure the power meter.

Additional plug-in modules can be connected to the back of the power meter to extend its basic functional scope.

Advantages

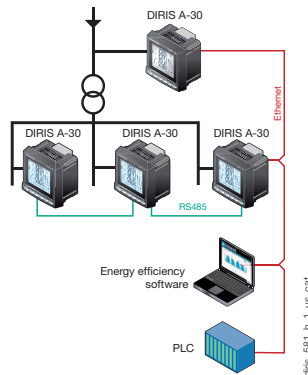

User-friendly operation

With its large backlit multiple-display screen and 6 pushbuttons, the DIRIS A-30 is easy to use.

Customizable

The DIRIS A-30 can be equipped with additional modules that give the user flexibility throughout the service life of the product. Communication modules and additional digital or analog inputs/outputs can be used to increase its range of functionality.

Functional diagram

Compliant with ANSI C12.20

ANSI C12.20 and IEC 61557-12 are high-level standards for power metering & monitoring devices. Compliance with these standards ensures equipment performance and reliability in terms of accuracy, as well as mechanical, EMC, temperature etc.

Bi-directional metering

DIRIS A-30 can measure the flow of electricity in both directions (import / export).

Functions

Multi-measurement

- Currents
- instantaneous: I1, I2, I3, In, Isystem
- average/max average: I1, I2, I3, In
- Voltages & frequency
- instantaneous: V1, V2, V3, U12, U23, U31, F, Vsystem, Ussystem
- average/max average: V1, V2, V3, U12, U23, U31, F
- Powers
- instantaneous: 3P, ΣP, 3Q, ΣQ, 3S, ΣS
- max average: ΣP, ΣQ, ΣS
- predictive: (ΣP), (ΣQ), (ΣS)
- Power factors
- instantaneous: 3PF, ΣPF
- average/max average: ΣPF
- Kfactor

Metering

- Active energy: +/- kWh
- Reactive energy: +/- kvarh
- Apparent power: kVAh
- Hour Meter: ⌚

Harmonic analysis

- Total Harmonic Distortion
- Currents: thd I1, thd I2, thd I3, thd In
- Phase-to-neutral voltage: thd V1, thd V2, thd V3
- Phase-to-phase voltage: thd U12, thd U23, thd U31
- Individual harmonics up to 63rd
- Currents: HI1, HI2, HI3, HIn
- Phase-to-neutral voltage: HV1, HV2, HV3,

- Phase-to-phase voltages: HU12, HU23, HU31

Demand profiles

- Active & reactive power: ΣP+/-; ΣQ+/-
- Voltages & frequency: V1, V2, V3, U12, U23, U31, F

Events⁽¹⁾

- Alarms on all electrical parameters.

Communications

- RS485 (Modbus & Profibus-DP)
- Ethernet (Modbus/TCP or Modbus RTU)
- Ethernet with RS485 Modbus RTU gateway over TCP

Inputs/Outputs

- Pulse metering
- Remote control/command
- Alarm report
- Pulse report

Analog output

- Analog 0/4- 20 mA

Front panel

1. Backlit LCD display.
2. Pushbutton for currents and for connection correction function.
3. Pushbutton for voltages and frequency.
4. Pushbutton for active, reactive and effective powers and for power factor.
5. Pushbutton for maximum and average values for currents and power levels.
6. Pushbutton for harmonics.
7. Pushbutton for electrical energy meters, timers and impulse counters.

Hot swappable modules

DIRIS® A-30

Pulse outputs

2 configurable pulse outputs (type, weight and run) on \pm kWh, \pm kvarh and kVAh.

MODBUS® communication

RS485 link with MODBUS® protocol (speed up to 38400 baud).

PROFIBUS® DP communication

SUB-D9 link with PROFIBUS® DP protocol (speed up to 12 Mbaud).

Analogue outputs

You can connect a maximum of 2 modules, i.e. 4 analogue outputs. 2 outputs can be allocated to:

3I, In, 3V, 3U, F, \pm Σ P, \pm Σ Q, Σ S, Σ PFL/C, Isys, Vsys, Usys, Ppred, Qpred, Spred, T°C internal, T°C 1, T°C 2, T°C3 and to 30 VDC power supply.

2 inputs - 2 outputs

You can connect a maximum of 3 modules, i.e. 6 inputs / 6 outputs.

2 outputs can be allocated to:

- monitoring: 3I, In, 3V, 3U, F, \pm Σ P, \pm Σ Q, Σ S, Σ PFL/C, THD 3I, THD In, THD 3V, THD 3U, Ppred, Qpred, Spred, T°C internal, T°C 1, T°C2, T°C3 and of time counter,
- remote control,
- timed remote control,
- 2 inputs for pulse counting.

Storage capability

- Memory function up to max. 62 days for P+, P-, Q+, Q- with a TOP for internal or external synchronisation of 5, 8, 10, 15, 20, 30 and 60 minutes.
- Memory function for the last 10 timed and dated alarms.
- Memory function for the last min and max instantaneous values for 3U, 3V, 3I, In, F, Σ P \pm , Σ Q \pm , Σ S, THD 3U, THD 3V, THD, 3U, THD, 3V, THD, 3I, THD In.
- Memory function of average values 3U, 3V and F as a function of synchronisation (maximum 60 days).

Ethernet communication

- Ethernet link with MODBUS/TCP or MODBUS RTU over TCP.

Ethernet communication with RS485 MODBUS gateway

- Ethernet link with MODBUS/TCP or MODBUS RTU over TCP.
- Connect 1 to 247 RS485 MODBUS slaves.

DIRIS A-30

Multifunction power meter - Panel mounted

Works with 5A secondary current transformers

Electrical characteristics

Measurement of currents on insulated inputs (TRMS)	
Via CT primary	9,999 A
Via CT secondary	1 or 5 A
Measurement range	0 ... 11 kA
Input consumption	≤ 0,1 VA
Measurement updating period	1 s
Accuracy	0.2%
Permanent overload	6 A
Intermittent overload	10 I _n for 1 s
Voltage measurements (TRMS)	
Direct measurement between phases	50 ... 1039 VAC
Direct measurement between phase and neutral	28 ... 600 VAC
VT primary measurement	500,000 VAC
VT secondary measurement	60, 100, 110, 173, 190 VAC
Frequency	50 / 60 Hz
Input consumption	≤ 0,1 VA
Measurement updating period	1 s
Accuracy	0.2%
Current - voltage product	
Limitation for CT 1 A	10,000,000
Limitation for CT 5 A	10,000,000
Power measurement	
Measurement updating period	1 s
Accuracy	0.5%
Power factor measurement	
Measurement updating period	1 s
Accuracy	0.5%
Frequency measurement	
Measurement range	45 ... 65 Hz
Measurement updating period	1 s
Accuracy	0.1%
Energy accuracy	
Active (according to IEC 62053-22)	Class 0.5 S
Reactive (according to IEC 62053-23)	Class 2
Auxiliary power supply	
Alternative voltage	110 ... 400 VAC
AC tolerance	± 10 %
Direct current	120 ... 350 VDC / 12 ... 48 VDC
DC tolerance	± 20 % / - 6 ... + 20 %
Frequency	50 / 60 Hz
Power consumption	≤ 10 VA

Module 2 inputs - 2 outputs: outputs (alarms / control)	
Number of relays	2 ⁽¹⁾
Type	250 VAC - 5 A - 1150 VA
Module 2 inputs - 2 outputs: optical coupler inputs	
Number	2 ⁽¹⁾
Power supply	10 ... 30 VDC
Minimum width of signal	10 ms
Minimum length between 2 pulses	18 ms
Type	Optical couplers
Pulse output module	
Number of relays	2
Type	100 VDC - 0.5 A - 10 VA
Max. number of manoeuvres	≤ 10 ⁸
Analog output module	
Number of outputs	2 ⁽²⁾
Type	Insulated
Scale	0 / 4 ... 20 mA
Load resistance	600 Ω
Maximum current	30 mA
MODBUS communication module	
Link	RS485
Type	2 to 3 half duplex wires
Protocol	MODBUS [®] RTU
MODBUS [®] speed	4800 to 38400 baud
PROFIBUS DP communication module	
Link	SUB-D9
Protocol	PROFIBUS [®] DP
PROFIBUS [®] speed	9.8 kbaud ... 12 Mbaud
Ethernet communication module	
Connection technology	RJ45
Baud rate	10 base T / 100 base T
Protocol	MODBUS TCP or MODBUS RTU on TCP
Operating conditions	
Operating temperature range	+14 ... +131 °F / - 10 ... + 55 °C
Storage temperature	-4 ... +185 °F / - 20 ... + 85 °C
Relative humidity	95%

(1) Max. 3 modules per DIRIS A-30.

(2) Max. 2 modules per DIRIS A-30.

Dimensions (in/mm)

Type	Panel mounting
Dimensions W x H x D	3.78 x 3.78 x 2.36 in / 96 x 96 x 60 mm
Case degree of protection	IP30
Front degree of protection	IP52
Display type	Backlit LCD display
Type of terminal strips	Fixed or detachable
Section of connection for voltages and other terminals	AWG 34 ... 10 / 0.2 ... 2.5 mm ²
Section of connection for currents	AWG 20 ... 9 / 0.5 ... 6 mm ²
Weight	14.11 oz / 400 g

Expert Services

Our service engineers are an essential part of our team, and they are dedicated to ensuring your power monitoring system provides accurate and reliable measurements to your EPMS software or SCADA system.

Our services include:

- > Site audits to verify the proper wiring of your system
- > Personnel training on how to configure, operate and maintain power monitoring equipment and associated software

DIRIS A-20

Multifunction power meter - Panel mounted
Works with 5A secondary current transformers

DIRIS A-20

diris_981_a_front.eps

Function

The DIRIS A-20 is a panel mounted multifunction power meter for low voltage electrical installations, compatible with 1A or 5A secondary CTs.

The device is easy to use thanks to its large backlit LCD display and 4 keys used to view readings and configuration.

Additional plug-in modules can be connected to the back of the power meter to extend its basic functional scope.

Advantages

User-friendly operation

With its large backlit multiple-display screen with 4 pushbuttons, the DIRIS A-20 is easy to use.

Compliant with ANSI C12.20 and IEC 61557-12

ANSI C12.20 and IEC 61557-12 are high-level standards for power metering & monitoring devices. Compliance with these standards ensures equipment performance and reliability in terms of accuracy, as well as mechanical, EMC, temperature etc.

Customizable

Additional communication and input/output modules can extend the basic functional scope of this product. Equipped with additional modules, the DIRIS A-20 can provide the user with flexibility and expandability throughout the service life of the product.

Bi-directional metering

DIRIS A-20 can measure the flow of electricity in both directions.

Functions

Multi-measurement

- Currents
 - instantaneous: I1, I2, I3, In
 - maximum average: I1, I2, I3, In
- Voltages & frequency
 - instantaneous: V1, V2, V3, U12, U23, U31, F
- Powers
 - instantaneous: 3P, ΣP, 3Q, ΣQ, 3S, ΣS
 - maximum average: ΣP, ΣQ, ΣS
- Power factors
 - instantaneous: 3PF, ΣPF

Metering

- Active energy: +/- kWh
- Reactive energy: +/- kvarh
- Hour Meter: ⌚

Harmonic analysis

- Total harmonic distortion (rank 51)
 - Currents: thd I1, thd I2, thd I3
 - Phase-to-neutral voltage: thd V1, thd V2, thd V3
 - Phase-to-phase voltage: thd U12, thd U23, thd U31

Events

Alarms on all electrical parameters

Communications⁽¹⁾

RS485 with MODBUS protocol

Output

- Equipment control
- Alarm report
- Pulse report

Input

- Information report from a dry external contact
(1) Available as an option (see the following pages).

Front panel

1. Backlit LCD display
2. Pushbutton for currents (instantaneous and maximum), THD currents and the connection correction function.
3. Pushbutton for voltages, frequency and THD voltages.
4. Pushbutton for power (instantaneous and maximum), active, reactive and effective, power factor.
5. Pushbutton for energy sources and timer counter.

Dimensions (in/mm)

Type	Panel Mounting
Dimensions L x H x P	3.78 x 3.78 x 2.36 in / 96 x 96 x 60 mm
Case degree of protection	IP30
Front degree of protection	IP52
Display type	Backlit LCD

Plug-in optional modules

DIRIS A-20

DIRIS_773_a_1_cat

1 output

1 output that can be configured for:

- pulses: configurable (type, weight, duration) to kWh or kVarh.
- Monitoring: 3I, In, 3V, 3U, F, ΣP, ΣQ, ΣS, ΣPFL/C, THD 3I, THD 3V, THD 3U and timer meter.
- Equipment control

Communication

RS485 Modbus RTU communication (speed up to 38400 baud).

3 inputs , 1 output

3 inputs can be configured into:

- Information report from an external contact.

1 output that can be configured for:

- Pulses: configurable (type, weight, duration) to kWh or kVarh.
- Monitoring: 3I, In, 3V, 3U, F, ΣP, ΣQ, ΣS, ΣPFL/C, THD 3I, THD 3V, THD 3U and timer meter.
- Equipment control

DIRIS A-10

Multifunction power meter - DIN-rail mounted
Works with 5A secondary current transformers

DIRIS A-10

Function

The **DIRIS A-10** is a DIN-rail mounted power meter.

Advantages

Easy to use

Backlit LCD display with 5 hotkeys for direct access to measurement and configuration menus.

Built-in temperature sensor

It allows variations in temperature to be detected.

Compliant with ANSI C12.20 and IEC 61557-12

ANSI C12.20 and IEC 61557-12 are high-level standards for power metering & monitoring devices. Compliance with these standards ensures equipment performance and reliability in terms of accuracy, as well as mechanical, EMC, temperature etc.

Bi-Directional Metering

DIRIS A-10 can measure the flow of electricity in both directions (import / export).

DIRIS DigiBOX A

Multifunction power meter - enclosed

DIRIS DigiBOX A
Enclosed power meter

Function

DIRIS DigiBOX A is an easy-to-install enclosed single-point submetering solution. It provides users with all they need for a complete submeter installation. Simply select the current sensors (CTs) from our wide plug and play selection to complete your system. With just two part numbers, DIRIS DigiBOX A allows you to address a wide range of metering applications.

DigiBOX A is powered by our DIRIS A-40 and DIRIS A-200 power monitoring device, loaded with features, design and performance.

Advantages

Easy to order

- Same part number for indoor or outdoor installations (NEMA 3R, 12, 4, 4X)
- Approved for indoor or outdoor installations (NEMA 3R, 12, 4, 4X)
- Universal system voltage and power supply
- DigiBOX A comes standard with flexible I/Os and communication protocols

Safe and Reliable

- cULus listed enclosures and components
- Assembled at our cULus 508A facility
- Fused voltage connections
- Detailed installation and commissioning instruction guides

Plug & Play design

- Color-coded RJ12 cables for easy phase identification when wiring current sensors to the DigiBOX A
- Automatic detection of current sensor type and rating
- Using low-voltage mV current sensors, no shunting blocks are needed, they can be disconnected safely under load

Accurate

Accuracy of measurements meets ANSI C12.20 and IEC 61557-12 standards:

- Class 0.5 system accuracy (Meter + TE/ITR/TF current sensors) from 2% to 120% of rated current
- Class 0.2 DigiBOX A meter accuracy

DIRIS DigiBOX B

Multifunction power meter - enclosed

DIRIS DigiBOX B
Enclosed power meter

Function

DIRIS DigiBOX B is an easy-to-install enclosed single-point submetering solution. It provides users with all they need for a complete submeter installation. Simply select the current sensors (CTs) from our wide plug & play selection to complete your system. With just two part numbers, DIRIS DigiBOX B allows you to address a wide range of metering applications.

DigiBOX B is powered by our DIRIS B-30 power monitoring device that communicates Modbus RTU via RS485.

Advantages

Safe and reliable

- cULus listed enclosures and components
- Assembled at our cULus 508A facility
- Fused voltage connections
- Detailed installation and commissioning instruction guides

Accurate

Accuracy of measurements meets ANSI C12.20 and IEC 61557-12 standards:

- Class 0.5 system accuracy (Meter + TE/ITR/TF current sensors) from 2% to 120% of rated current
- Class 0.2 DigiBOX B meter accuracy

Plug & Play design

- Color coded RJ12 cables for easy phase identification when wiring current sensors to the DigiBOX B
- Automatic detection of current sensor type and rating
- Using low-voltage mV current sensors, no shorting blocks are needed, they can be disconnected safely under load

The solution for

- > Renewable
- > Infrastructure
- > Industry
- > Buildings

Strong points

- > Safe and reliable
- > Plug & Play design
- > Accurate

Conformity to standards

- > cULus 508A

- > ANSI C12.20

- > PBI Meter per CA Energy Commission

- > IEC 61557-12

- > UL 61010-1
CSA-C22.2 No. 61010-1

DIRIS DigiBOX B

Multifunction power meter - enclosed

Dimensions (in/mm)

Technical characteristics

Electrical characteristics

Input Power	
Voltage	110 - 240 VAC (Ph-Ph or Ph-N) with USDBBB30NDO 110 - 480 VAC (Ph-Ph or Ph-N) with USDBPB30NDO
Frequency	50/60 Hz

Measurement characteristics

Power and energy measurement	
Accuracy active energy and active power	Class 0.2, DigiBOX B (Meter Only) Class 0.5 (Meter with TE, iTR, TF sensors) Class 1 (Meter + TR sensors)
Accuracy reactive energy	Class 2 (Meter with TE, iTR, TF sensors)
Power factor measurement	
Accuracy	Class 0.5 (Meter with TE, iTR, TF sensors) Class 1 (Meter + TR sensors)
Voltage measurement	
Electrical network type	Single-phase (1P2W) / Two-phase (2P2W) / Two-phase with neutral (2P3W) / Three-phase (3P3W) / Three-phase with neutral (3P4W)
Voltage measurement rating	500-300 VAC (Ph-N) / 87-520 VAC (Ph-Ph) – CAT III
Voltage accuracy	Class 0.02
Voltage input consumption	≤ 1 VA
Frequency range	45 – 65 Hz
Frequency accuracy	Class 0.2
Current measurement	
Number of current inputs	4
Associated current sensors	Solid-core TE, split-core TR/iTR, flexible Rogowski TF
Connection	Socomec RJ12 cables
Accuracy	Class 0.2 DigiBOX B (Meter Only) Class 0.5 (Meter with TE, iTR, TF sensors) Class 1 (Meter + TR sensors)

Mechanical characteristics

Enclosure	Polycarbonate
Enclosure dimensions (in)	12 (H) x 10 (W) x 6 (D)
Protection rating	NEMA 4X / IP66
Operational temperature	+14 ... +158 °F / -10 °C ... +70 °C
Altitude	≤ 9840 ft / 3000 m
RS485	
Link	RS485
Connection type	Half-Duplex, 2 wires
Protocol	Modbus RTU
Baudrate	1200 – 115200 baud
USB	
Link	Micro USB Type b
Protocol	Modbus RTU
Use	Configuration via Easy Config System and firmware upgrade via Product Upgrade Tool

Expert Services

Our service engineers are an essential part of our team, and they are dedicated to ensuring your power monitoring system provides accurate and reliable measurements to your EPMS software or SCADA system.

Our services include:

- > Site audits to verify the proper wiring of your system
- > Personnel training on how to configure, operate and maintain power monitoring equipment and associated software
- > Remote and on-site commissioning to ensure that your system is up and running quickly, with peace of mind.

DIRIS DigiBOX M

Multi-circuit power meter - enclosed

DIRIS DigiBOX M8
Multi-point power meter

Function

Socomec's enclosed **DIRIS DigiBOX M** submetering line is designed to offer a complete and modular multi-circuit metering solution in NEMA 12/3R enclosures for indoor and outdoor use.

With ease of installation for retrofit applications and factory pre-wired Plug & Play technology, DIRIS DigiBOX solutions provide considerable savings in installation costs and customer site downtime. The solution offers the benefits of the scalable & customizable Digiware technology.

Advantages

Plug & Play

- Factory pre-wired
- Color-coded RJ12 cables for easy phase identification when wiring current sensors to the DigiBOX meters.
- Automatic detection of current sensor types and ratings
- Using low-voltage mV current sensors, no shunting blocks are needed, they can be disconnected safely under load

Accurate

Accuracy of measurements meets ANSI C12.20 and IEC 61557-12 standards:

- Class 0.5 system accuracy (Meter + TE / ITR / TF current sensors) from 2% to 120% of rated current
- Class 0.2 DigiBOX M meter accuracy

Safe & reliable

- Durable NEMA 12, 3R
- cULus listed enclosures and components
- Assembled at our cULus 508A facility
- Fused voltage connections
- Detailed installation and commissioning instruction guides

DIRIS MCM

Multi-circuit Energy & Power meter for retrofit & sub-metering applications

DIRIS MCM

Function

The DIRIS MCM is a revenue grade networked Energy & Power sub-meter promoting a simplified approach to retrofit applications, while ensuring safety and code compliance. It has been designed using industrial best practices providing industry leading durability and ease of installation.

The DIRIS MCM supports 333mV output or Rogowski style current sensors. It has been designed with mechanical, electrical and software features that will appeal to those seeking a simplified approach to installation and setup of energy management applications.

Advantages

Increased Safety

The DIRIS MCM is designed to improve installation safety and meets electrical code requirements:

- Built-in optional disconnect provides path to quickly and easily service the meter independently of other circuits.
- mV CT connections, can be connected and disconnected under load.
- No user-direct access to dangerous high voltages, keeping instrumentation engineers safe.
- Retained fasteners, ensuring screws stay securely in place and don't fall inside electrical panels.

Easy installation

- Wall or top cabinet mounting.
- Built-in 1" conduit holes - (3) at the bottom and (3) at the top of the meter.
- Push-in terminals for current sensors, no tools required!
- Clear visible numbering of CT inputs, with color coded terminals that match CT output lead wires.

Easy commissioning

- Configuration with a simple and intuitive PC application via a direct USB connection.
- One IP address and Modbus slave address supports the entire meter, simplifying network integration pain points.
- Patented CT configuration correction algorithm helps eliminate user wiring and setup errors while reducing downtime.

Industrial design

- Aluminum bonded enclosure.
- Internal fuse protection of each hot leg.
- Fuses can be replaced safely for maintenance.

Compact

- The most compact high density multi-circuit meter on the market, in an enclosed format.
- Ideal for retrofitting electrical distribution centers with limited wall space.

General Characteristics

- Accepts 333 mV and Rogowski sensors
- Modbus RTU, TCP and BACnet IP communication
- Wireless 915 MHz option
- Class 0.2 accuracy per ANSI C12.1

The solution for

Wireless Technology

RF system for wireless communication (915 MHz) of meter data.

RF END-Node
Transmitter

RF HUB-Node
Receiver

Typical Architecture

DIRIS MCM

DIRIS MCM power meters have been designed to be networked from different locations throughout a facility or campus environment. The DIRIS MCM supports Modbus protocol using either RS485 or Ethernet communication making compatibility and integration seamless with most EMS/BMS systems.

Need Wireless ?

For isolated metering points where it may be impractical or costly to bring a wired communication bus, the DIRIS MCM has been designed to be plug and play compatible with the RF system for wireless communication (915 MHz) of measurements.

The RF END-Node is connected via RS485 to the power meter (DIRIS MCM) and sends measurement via wireless link to the RF HUB-Node. No external power supply is required, as the END-Node is self-powered by the DIRIS MCM. Each HUB-Node can communicate wirelessly with up to (8) END-Nodes. The HUB-Node offers RS485 (Modbus RTU) and Ethernet (Modbus TCP) communication capabilities to any third-party EMS/BMS system.

WEBVIEW software

The DATALOG H80 provides data logging of measurements and the embedded web based application WEBVIEW-L allows to visualize real time and historical measurement data.

Current sensors

Various types of current sensors can be connected to the DIRIS MCM power meter. Socomec provides a range of split-core and Rogowski flexible sensors which make installation easy with minimum intrusion in retrofit applications. Our split-core sensors allow to measure up to 600 A, while our Rogowski sensors are ideal for busbar or high current applications up to 4000 A. Refer to page 4 for references, ratings and window sizes of current sensors.

Expert Services

Our service engineers are an essential part of our team, and they are dedicated to ensuring your power monitoring system provides accurate and reliable measurements to your EPMS software or SCADA system.

Our services include:

- > Site audits to verify the proper wiring of your system
- > Personnel training on how to configure, operate and maintain power monitoring equipment and associated software
- > Remote and on-site commissioning to ensure that your system is up and running quickly, with peace of mind.

For further information, please contact your nearest SOCOMEC branch.

RF END-Node & HUB-Node

Wireless system for sub-metering applications

RF END-Node & HUB-Node

Function

The Socomec RF system is designed to replace Ethernet LAN network infrastructure and Modbus RS485 multi-drop wiring runs with a secure local wireless network. The RF system has been designed to be networked from different locations throughout a facility or campus environment. The RF END-Node has an RS485 input to connect to any Modbus device that needs wireless communication, while the RF HUB-Node converts the wireless communication into an RS485 or Ethernet bus, making compatibility and integration seamless with all EMS/BMS systems.

Advantages

Easy installation

The Socomec RF system is designed to improve installation safety and reduce overall installation time

- Wireless RS485 network saves both time and money eliminating costly wire runs.
- The RF END-Node is self-powered by the DIRIS MCM meter and can be mounted directly on top of it.
- (1) RF HUB-Node can support up to (8) Modbus devices on a network.

Easy commissioning

- Configuration with a simple and intuitive PC application (RF-View) via a direct USB connection to RF HUB-Node.
- Visual signal strength feature guarantees optimal device placement for maximum network coverage.
- (1) RF HUB-Node can support up to (8) different Modbus devices on one network.

Rugged industrial design

- Aluminum body case.
- Extendable and multi-position antenna provides unlimited mounting options and avoids communication losses.
- Easy-access LED status lights.
- RF Encryption ensures data confidentiality.

Programmable / Customizable

- Equipped with an automatic communication retry feature to ensure no data packets go missing.
- PreFetch zone improves data reliability and response time to Modbus Host.
- Assign one RF END-Node to a specific Modbus address.
- Using Test utility allows user to see data results while both on and off site.

General Characteristics

- Behaves as a virtual (wireless) RS485 serial network
- Modbus RTU and TCP communication
- Wireless 915 MHz encrypted
- RF END-Node is directly powered from the DIRIS MCM power meter

The solution for

- > Commercial buildings
- > Retail
- > High density residential
- > Industrial plants

Strong points

- > 128 Bit AES encryption
- > Easy installation
- > Easy PC-based setup
- > Reduce downtime
- > Compact
- > Self-powered

Typical Architecture

Socomec RF System

Socomec RF system is a general-purpose wireless Modbus system designed to replace RS485 multi-drop wiring installations. The system is designed as a "star" network with a Modbus Master physically connected to the RF HUB-Node which remotely communicates with up to (8) RF END-Nodes. RF END-Nodes are connected via RS485 to power meters or any Modbus enabled devices.

Simple Wireless architecture

The RF system has been designed to be plug and play compatible with the DIRIS MCM meter for wireless communication (915 MHz) of measurements. The RF END-Node is connected via RS485 to the DIRIS MCM and sends measurement via wireless link to the RF HUB-Node. No external power supply is required, as the RF END-Node is self-powered by the DIRIS MCM.

Each RF HUB-Node can communicate wirelessly with up to (8) RF END-Node. The RF HUB-Node offers RS485 (Modbus RTU) and Ethernet (Modbus TCP) communication capabilities to any third-party BMS/EMS system.

PC-based configuration software (RF-View)

The RF system is configured using a simple and Intuitive PC application (RF View) with the following features:

- Assignable (one RF END-Node per address range)
- Automatic Communication Retries
- Configurable "Prefetch" modes – up to 3
- Real Time Signal Strength Indicator

Antennas

Various types of antennas can be connected to the RF system to maximize signal strength.

Socomec has tested a range of antennas from short to high-gain to boost signal strength which make installation easy across a wide range of application environments.

Socomec's standard supplied antenna is a market tested magnetic base with Whip antenna. The lead wire for the base can be extended to optimize antenna location and maximize signal strength.

Magnetic antenna base with Omni-directional Whip antenna
(Supplied with RF END-Node and HUB-Node)

TE sensors

Solid-core AC current sensors

For DIRIS Digiware, DIRIS A and DIRIS B

TE solid-core sensors

Function

TE solid-core sensors are used with DIRIS Digiware I, DIRIS A, or DIRIS B Power Monitoring Devices to measure currents from 5 to 2000 A with only 7 part numbers and with the same guaranteed accuracy. The quick RJ12 connection, and the integrated intelligence prevent any connection or configuration errors. Numerous accessories are available to mount the sensors in any type of electrical panel.

Advantages

Plug & Play

- RJ12 concept for a quick and reliable connection to the power meter.
- Color-coded RJ12 cables provides easy phase identification to prevent phase inversions.
- Automatic detection of current sensor type and rating.
- Low-voltage mV output - No shorting blocks are needed, TE sensors can be disconnected safely under load.

Accurate

- Unique PreciSense technology guaranteeing system accuracy according to IEC 61557-12 standard.
- Class 0.5 system accuracy (Power Meter + TE current sensor) from 2% to 120% of rated current.

Smart

- Any wiring mishap, whether it's a phase inversion, a wrong orientation or a configuration error can be corrected via software. Save time, effort and resources, avoiding the hassle of reworking physical wiring on current sensors.

Additional accessories

Adapter for 1A/5A secondary CT

- Allows to use any existing 1A or 5A secondary current transformers and connect them via an RJ12 cable to DIRIS Digiware I, DIRIS A, and DIRIS B power meters. The adaptor has the dimensions as the TE-18 current sensor.

Coupling link

- Associated with the TE range, this accessory is for inter-connecting the sensors when linear or staggered mounted.

Sealable cover

- The sealable cover prevents tampering and ensures integrity of measurements.

TR/iTR sensors

Split-core AC current sensors

For DIRIS Digiware, DIRIS A and DIRIS B

TR Split-core current sensors

Function

TR/iTR split-core current sensors are used with DIRIS Digiware I, DIRIS A, or DIRIS B Power Monitoring Devices to measure currents from 25 to 600 A, with the same guaranteed accuracy. The quick RJ12 connection, and the integrated intelligence prevent, any wiring or configuration errors.

TR/iTR split-core sensors are placed around the live conductors without disrupting the wiring and the supply, highly convenient for retrofit applications.

Advantages of the TR and iTR sensors

Plug & Play

- RJ12 concept for a quick and reliable connection to the power meter.
- Color-coded RJ12 cables provides easy phase identification to prevent phase inversions.
- Automatic detection of current sensor type and rating.
- Low-voltage mV output - No shorting blocks are needed, TR sensors can be disconnected safely under load.

Smart

- Any wiring mishap, whether it's a phase inversion, a wrong orientation or a configuration error can be corrected via software.
- Save time, effort and resources, avoiding the hassle of reworking physical wiring on current sensors.

Accurate

- Unique PreciSense technology guaranteeing system accuracy according to IEC 61557-12 standard.
- Class 0.5 system accuracy (Power Meter + iTR current sensor) and class 1 system accuracy (Power Meter + TR sensor) from 2% to 120% of rated current.)

Unique advantages of the iTR range

VirtualMonitor technology

VirtualMonitor provides a smart monitoring of protective device status:

- Real time Position & Trip.
- Alarms in case of Opening or Trip.
- With no additional hardware or wiring (no auxiliary contacts needed)

AutoCorrect technology

AutoCorrect technology guarantees that your power monitoring system provides reliable measurements:

- Automatic detection of commissioning errors (phase inversion, wrong orientation etc.).
- Even available off-load using a voltage sensing technology.

The solution for

TF sensors

Flexible Rogowski AC current sensors

For DIRIS Digiware, DIRIS A and DIRIS B

diris-L_005.png

TF Flexible current sensors

Function

TF flexible **Rogowski coil current sensors** are used with DIRIS Digiware I, DIRIS A, or DIRIS B Power Monitoring Devices to measure currents from 100 to 6000 A with the same guaranteed accuracy. The quick RJ12 connection, and the integrated intelligence prevent any connection or configuration errors.

TF current sensors provide a versatile solution when space is limited, wrapped around irregular-shaped conductors or busbars without disrupting the wiring and the supply, highly convenient in retrofit applications. No external power supply is needed, as the sensor is powered from the power meter through the RJ12 connection.

Advantages

Plug & Play

- RJ12 concept for a quick and reliable connection to the power meter.
- Automatic detection of current sensor type and rating.
- Low-voltage mV output - No shunting blocks are needed, TF sensors can be disconnected safely under load.

Accurate

- Unique PreciSense technology guaranteeing system accuracy according to IEC 61557-12 standard.
- Class 0.5 system accuracy (Power Meter + TF current sensor) from 2% to 120% of rated current.
- Accuracy is guaranteed regardless of the position of the conductor in the loop.

Safe locking mechanism

- The locking system prevents the loop from opening, guaranteeing continuous functioning and accuracy even under harsh conditions.

Smart

- Any wiring mishap, whether it's a phase inversion, a wrong orientation or a configuration error can be corrected via software. Save time, effort and resources, avoiding the hassle of reworking physical wiring on current sensors.

Simplified installation

- The Rogowski integrator is built into the RJ12 cable enabling a quick and compact integration (no DIN rail assembly required) inside electrical panels.
- The integrator is self-supplied by the power meter through the RJ12 cable and does not need an external power supply.

DC current sensors

Associated with DIRIS Digiware DC

Function

The **DC current sensors** measure the DC load currents of an electrical installation and transmit information to the DIRIS Digiware Idc measurement modules via an RJ12 cable.

The range consists of solid-core and split-core sensors ranging from 50 to 5000 A in various sizes allowing them to be used in new or existing electrical installations.

Up to 3 different DC sensors can be connected to the same DIRIS Digiware Idc module.

Advantages

Plug & Play

- A quick RJ12 connection makes wiring easy and reliable.
- Fast configuration of the current sensors.

Flexible

- A complete range of solid-core and split-core sensors from 50 to 5000 A designed for new or existing electrical installations.

Installation

- Easy to install.
- Ideal for installations with limited space available.
- Only 4 different frame sizes cover a wide measurement range.
- Color-coded cables for ease of identification, and to prevent wiring errors.

Bi-Directional Metering

- DIRIS Digiwar DC measure the flow of electricity in both directions.

The solution for

- > Data center
- > Telecommunication
- > Renewable power
- > Transportation

Split-core sensors 800 ... 2000 A (frame size 2)

DC current sensors

Associated with DIRIS Digiware DC

Connections

DC current is measured by external sensors connected to the DIRIS Digiware I-3xdc modules via RJ12-Molex cables. Connection of the current sensors is quick and error-free. A wide range of current sensors is available from Socomec to suit all installations and applications including split-core current sensors for retrofit applications.

The DC current sensors have the following technical characteristics:

- Open-loop Hall effect sensors.
- Solid-core or split-core.
- Power supply voltage: ± 15 V.
- Power supply current: ± 25 mA depending on the sensor.
- Output voltage: ± 4 V.
- 4-point male Molex terminal strip.
- Measurement range: 16 to 5000 A.
- Category III overvoltage.

- PIN 1: + 15 V (+ Vc)
- PIN 2: - 15 V (- Vc)
- PIN 3: sensor input (M)
- PIN 4: 0 V sensor (O)

Accu[®]-CT sensors

333mV split-core AC current sensors

20 to 600 A

ACTL-1250

ACTL-0750

Function

The **Accu@-CT** are hinged split-core current sensors, ideal for retrofit applications. They are available in two window opening sizes and offer a wide measurement range from 20 to 600 A. Their 333 mV output signal makes them compatible with DIRIS A-100/A-200 (333 mV models), WattNode and DIRIS MCM power meters, or any third party meter accepting 333 mV current sensors.

Advantages

High Accuracy

The patented Accu@-CT split-core current transformer technology delivers exceptional linearity and low phase angle error, essential for accurate power and energy measurements.

Safe

Built-in burden resistor provides 0.333 Vac voltage output at the rated full scale current, eliminating the need for shunting blocks.

Robust

All materials that make up the current transformers of the Accu@-CT range are cULus 2808 listed. This provides great tolerance against thermal and electric heating as well as a higher dielectric resistance.

Easy to install

The unique one-handed opening and closing mechanism makes installation a snap, even while wearing safety gloves, as well as a higher dielectric resistance.

TR-W sensors

333 mV split-core AC current sensors
63 to 600 A

TR-W
333 mV

Function

The TR-W are hinged split-core AC current sensors available in 63 A, 160 A, 250 A and 600 A primary rated currents. Their 333 mV output signal makes them compatible with DIRIS A-100/A-200 (333 mV models), WattNode and DIRIS MCM power meters, or any third party meter accepting 333 mV current sensors.

The compactness and low voltage output signal of the TR-W series make them ideal for retrofit applications with existing electrical panels having limited space.

The TR-W split-core series are cULus 61010 listed, certified by Underwriters Laboratory (UL).

Advantages

Plug & Play

- Split-core concept facilitates installation without disconnecting electrical wires inside panel.
- Built-in burden resistor provides 333 mV voltage output at the rated full scale current, eliminating the need for shunting blocks.

Long lead wires

The TR-W series come with standard 22-ft / 7m twisted pair lead wires, ideal for remote meter installation. This reduces installation downtime and costly wire extensions and materials, which typically increase the risk of wiring errors.

Compact

The compact design of the TR-W split-core series make them ideal for applications where space is limited, such as existing panelboards.

Accurate

The TR-W split-core sensors deliver a 0.5% accuracy per IEC 61869 over a wide range from 10 – 120% of the rated current, essential for accurate power and energy measurements.

Tamper proof

The TR-W current sensors can be sealed to prevent and detect possible tampering, which would alter energy readings.

The solution for

ROG

Flexible rope style AC current sensors - 131 mV
Up to 4000 A

ROG
131 mV / 1 kA

Function

The ROG Rogowski current sensors are flexible rope style AC current sensors available in four diameters (80mm, 120mm, 200mm and 300mm).

These Rogowski sensors deliver an output signal of 131 mV / 1000 A @60Hz, and are compatible with the DIRIS MCM power meters, with no additional integrator or power supply required.

The rope style and the low voltage output signal make them non-intrusive and ideal for retrofit applications with existing electrical panels having limited space.

They are ideal for applications with high currents, busbars and multiple sets of parallel conductors where conventional rectangular or rigid split-core sensors will not fit.

Advantages

Safe installation

- The open-ended design facilitates installation without disconnecting electrical wires inside the panel.
- Built-in burden resistor provides 131 mV voltage output at the rated full scale current, eliminating the need for shorting blocks.

Flexible installation

The rope-style concept provide significant installation flexibility for cable bundles, busbars and irregularly shaped conductors, where conventional rectangular or rigid CTs will not fit.

Safe locking mechanism

The locking mechanism prevents the loop from opening accidentally, guaranteeing continuous functioning and accuracy even under harsh conditions.

Accurate

The ROG split-core sensors deliver linear 0.5% accuracy across a wide current range, essential for accurate power and energy measurements.

Long lead wires

The ROG series come with standard 22-ft / 7m 3-wire output lead, ideal when the meter is installed remote from the electrical panel. This reduces the need for contractors to extend and splice wire leads which typically increases the risk of wiring errors.

Your unique solution, your customization

What are the benefits of customizing your current transformers and current sensors?

Perfectly adapted to what you need

Every sector and every application presents specific challenges.

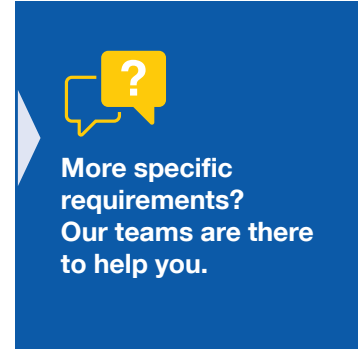

Designed to meet your unique requirements, our extensive range can be tailored to all your configurations and measurement specifications.

Performance optimisation

By tailoring the accuracy and other technical characteristics of your current transformers and current sensors, you can optimise their performance to perfectly meet your specific needs, while maintaining optimal compactness.

Visual consistency with your brand

Customise the colour, marking, and instructions of current sensors to ensure visual consistency with your corporate identity. This ensures an instantly recognisable piece of equipment that enhances your credentials.

More specific requirements?
Our teams are there to help you.

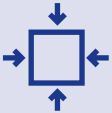

Discover the parameters that you can choose for **ACCULine** current transformers and current sensors:

Find current sensor and current transformer solutions tailor to your project!

Need help in choosing?

Discover the solutions that suit you.

WEBVIEW

Embedded software for power monitoring and energy management

Function

WEBVIEW is a web based software embedded in DIRIS A-40 power monitoring devices, DIRIS Digiware D-70 displays, DIRIS Digiware M-70 communication gateways and DATALOG H80/H81 dataloggers delivering real-time monitoring of all measurements up to 200 devices and displaying the breakdown of energy consumptions.

Uncover the causes of electrical disturbances and anticipate maintenance requirements due to historical records of multiple electrical parameters.

Pre-set alarms defined by the user can be sent by e-mail. Users can access WEBVIEW via a web browser on a PC or a tablet.

Strong points

Plug & Play

Quickly configure WEBVIEW due to the automatic detection of Socomec devices. Create geographical and electrical hierarchies to reflect your installation and your processes.

Easy to use

WEBVIEW centralises measurements from all downstream devices via a single clear and user friendly interface. The ergonomics of each screen allow users to easily and quickly analyze the parameters and the behavior of the installation.

Various functions

Very easy to configure and to use, WEBVIEW offers a wide range of features including real-time monitoring, alarm management and notification by e-mail, multi-utility analysis (electricity, water, gas), power parameter logging and allocation of consumption by end-use and location.

The solution for

- > Industry
- > Building
- > Infrastructure
- > Data center

Strong points

- > Plug & Play
- > Easy to use
- > Various functions

Compliance with standards

- > IEC 62974-1⁽¹⁾

⁽¹⁾ Energy Server standard applicable to WEBVIEW-M and L versions embedded in DIRIS Digiware M-70/D-70 and DATALOG H80.

Characteristics

Type	Hosting	Functions	Number of measurement devices
WEBVIEW-S	DIRIS A-40	Monitor, Alarm, Analyze	1
	DIRIS A-200	Monitor, Alarm, Analyze, Waveform, Photoview, Time of Use	1
WEBVIEW-M	DIRIS Digiware M-70	Monitor, Alarm, Analyse, Photoview	32
	DIRIS Digiware D-70	Monitor, Alarm, Analyse, Photoview	32
WEBVIEW-L	DATALOG H80/H81	Monitor, Alarm, Analyse, Photoview	100/200

Functions

Monitor

- Summary of the parameters measured for the electrical network and loads
- Display of voltage, current, power, power factor, total harmonic distortion (THD) and harmonics per rank
- Display of average/instantaneous values with min/max limits depending on the devices
- Total and partial energy consumption per load
- Input/output status
- Graphical or table representation

Alarm

- Alarms for overloads, events and input status changes
- Display of alarms history
- Sorting by type, nature, criticality or state
- Alarm notification by e-mail (SMTP)

Analyze

- Historical measurements and consumption
- Breakdown of consumption by location, by end-use and by utility type (water, gas, electricity, etc.)
- Export of consumption data in a CSV format

Photoview

- Photoview: customised dashboard of the WEBVIEW environment via the upload of graphical files (building plans, electrical circuit diagrams, production processes, etc.)
- Real time monitoring via drag and drop of parameters on the background pictures (measurement points, alarms, text, etc.)
- Display of the mapping of the measurement plan by cascading of several images

MODULYS GP-UL

Unique, fully modular, and redundant solution
from 25 to 100 + 25 kVA/kW

Applications

- > Data centers
- > Computer rooms
- > Banks
- > Healthcare facilities
- > Insurance
- > Telecom
- > Transport

Strong points

- > Ensures absolute business continuity
- > Aligns capacity to business demand
- > Optimizes costs over the full life cycle

Conformity to standards

- > UL1778
- > CSA C22.2 N. 107.3-05
- > FCC part15 Class A
- > IEC 62040-3 (VFI-SS-111)
- > NEMA 1 (IP20)
- > SEISMIC OSHPD pre-approval (available as option)

Function

With its flexible modularity providing seamless and risk-free power scalability up to 100 + 25 kW, the MODULYS GP-UL range is the ideal solution for unscheduled site upgrades or incremental power evolutions. The installed power can be increased up to 100 + 25 kW by adding hot-swap plug-in power modules for incremental steps of 25 kW.

Designed with no single point of failure, the MODULYS GP-UL offers all the advantages of the Green Power 2.0 technology.

Advantages

Fully modular system

- Plug-in power module.
- Plug-in battery module.
- Plug-in auxiliary mains bypass module.
- Top or bottom connection.
- Top-air exhaust module.

'Forever Young' concept

- Exclusive life cycle extension program.
- Eliminates end-of-life criticality.
- Based on an electronics-free cabinet and a set of plug-in parts.
- Module compatibility guaranteed for 20+ years.
- Allows for the implementation of future module technology.
- Company declaration of 20+ year compatibility.

Totally redundant design

- N+1, N+x redundancy level.
- Designed for no single point of failure.
- No centralized parallel control.
- Totally independent power modules.
- Redundant parallel bus connection (ring configuration).

Enhanced serviceability performance

- Power module automatic firmware alignment.
- Fast & safe maintenance based on hot-swap parts (power modules, auxiliary mains bypass, electronic boards).
- Load fully protected in online double conversion mode (VFI) during power module replacement.
- 3-color LED bar for quick and easy detection of the power module status.
- Battery can be hot-swapped without shutting down the connected equipment.
- Ready for concurrent maintenance.

Standard electrical features

- Dual input mains.
- Backfeed protection: detection circuit.
- EBS (Expert Battery System) for battery management.
- Auto battery test.
- Battery temperature sensor.
- Energy saver mode.

Electrical options

- External battery cabinet.
- High capacity battery charger.
- Internal backfeed isolation device.

Standard communication features

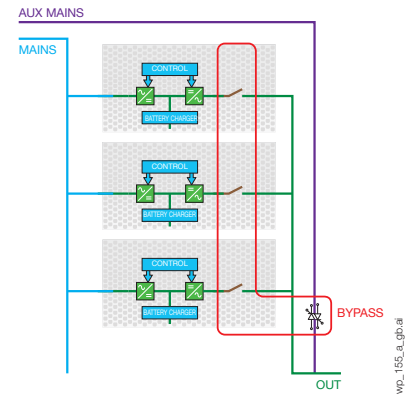

- User-friendly 7" touch-screen multilingual color graphic display.
- 2 slots for communication options.
- USB port to download UPS report and log file.
- Ethernet port for service purpose.
- Commissioning wizard.

Communication options

- Dry-contact interface (configurable voltage-free contacts).
- MODBUS RTU RS485 or MODBUS.
- BACnet/IP interface.
- NET VISION: professional WEB/SNMP Ethernet interface for secure UPS monitoring and remote automatic shutdown

Hybrid bypass architecture

- Distributed Inverter bypasses in parallel to segregated centralized Aux Mains bypass creating a redundant solution.

MODULYS GP-UL

Unique, fully modular, and redundant solution
from 25 to 100 + 25 kVA/kW

The benefit of a fully modular system

Easy to manage

- Totally modular system for power scaling or for quickly adapting to business changes.
- Standardized system and modules covering a wide range of power and back-up times.
- Repeatable and standardized scalable architecture for time-saving design for different configuration & architecture requirements.

Pay as you need

- No prior expenditure for unpredictable future extensions in power and back-up time.
- Space saving thanks to reduced footprint and front access.
- Eliminates installation rework costs when new capacity is required from IT physical infrastructure.
- No risk of design oversizing due to project data uncertainty.

Everything front-access

- Connections, switches, manual bypass, auxiliary mains static bypass, power modules and all the electric parts have front-access.
- Total footprint is not increased as rear extra clearance for maintenance is not needed.
- Easy, quick, comfortable, safe and risk-free installation and maintenance.
- More reliable system.

The benefit of totally redundant design

Total resilience

- Electronics-free (failure-free) cabinet.
- Totally independent and self-sufficient modules.
- Real module selective disconnection (automatic inverter bypass with galvanic separation).
- No centralised control for parallel and load sharing management.
- Totally segregated, fully sized and centralised auxiliary mains bypass.
- Configurable N+1 to N+x redundancy (power & battery).
- No single point of failure.
- Redundant parallel bus connection (ring configuration).

Optimum reliability

- Power module designed for superior robustness proved by an independent body (MTBF > 1,000,000 hr).
- Hybrid bypass architecture with distributed module's bypass and centralised mains bypass for ultimate reliability and robustness.
- Highly robust auxiliary mains bypass (MTBF > 10,000,000 hr).
- Acid leak-proof modular battery box.

Cost-effective redundancy

- No need to duplicate the system hardware to get redundancy.
- Redundancy is achievable simply by adding one more power and battery module.
- Redundancy can be easily combined with power scalability.
- Upgrading and/or power module replacement can be done by simple plug-in without any commands to the system.

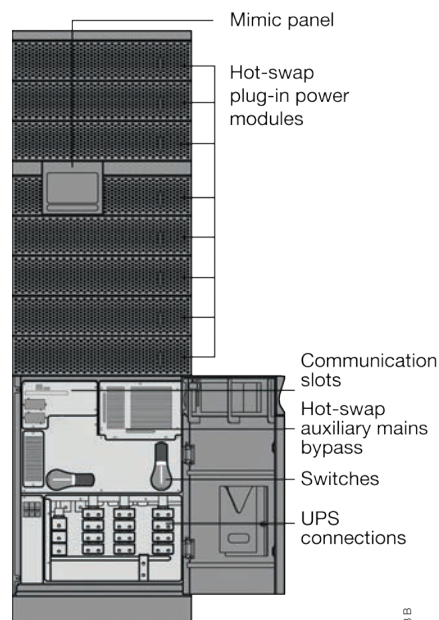

Maximum availability

- Fast recovery of lost redundancy thanks to minimum MTTR (Mean Time To Repair).
- No risk of downtime during power upgrading and maintenance.
- No risk of failure propagation.

A flexible modular UPS system

25-200 kW

GREEN 158 B

Seamless and risk-free scalability & upgrading

- MODULYS GP-UL protects critical loads in all conditions, including power upgrading and maintenance procedures.
- No risk of human error and downtime.

On-line power scalability

- MODULYS GP-UL allows you to increase power scalability and redundancy while keeping the load protected on inverter mode simply by plugging-in a new power module and waiting for its automatic self-configuration, without any human intervention.

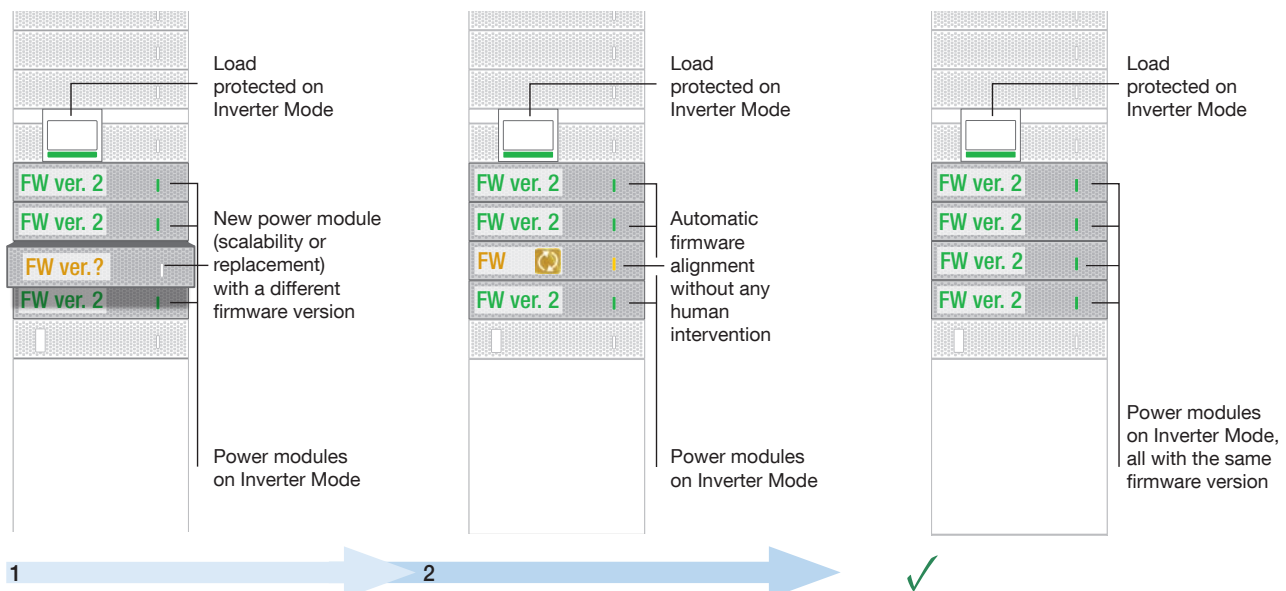

Power module automatic firmware alignment

- Even the power module firmware alignment is totally risk free.
- When a new power module is plugged in, the system checks what firmware version is embedded and if it is different automatically aligns it to one of the other modules. The load is protected at all times while running on inverter mode.

On-line global firmware update

- It is also possible to upgrade the global firmware without switching to bypass to keep the load protected on Inverter mode.
- Automatic procedure for a risk-free firmware upgrade.

MODULYS GP-UL

Unique, fully modular, and redundant solution
from 25 to 100 + 25 kVA/kW

Flexible and modular back-up times

MODULYS GP-UL offers modular solutions to meet all your requirements for back-up times (whether a few minutes or several hours) without compromising flexibility and scalability.

Internal hot swap battery

- Designed for short back-up time.
- Long-Life batteries available as standard.
- Compact solution with a small footprint.

Modular hot-swap battery cabinets

- Designed for medium and long back-up times.
- Long-Life batteries available as standard.
- Vertical and horizontal modularity ensuring flexible back-up times.

Modular battery cabinet

- Designed for long back-up times.
- Long-Life batteries available as standard.
- Horizontal modularity ensuring flexible back-up times.

MODULYS GP-UL "Forever Young" concept

- MODULYS GP-UL excels not only in efficiency, flexibility, capacity management and sustainability - five aspects that are crucial for optimum performance.
- It employs an exclusive concept called 'Forever Young' which allows the life-cycle extension of MODULYS GP-UL and eliminates the criticality of system end-of-life.
- It also keeps the system open for the implementation of future technology improvements without modifying the infrastructure.

The 'Forever Young' concept:

- Is based on electronic-free (failure-free) cabinets where the components that are subject to aging are all plug-in and therefore quick and easy to replace.
- Allows life-cycle extension via periodic replacement of power modules before they start aging.
- Provides an always up-to-date system that uses the latest technology.
- Assures power modules and spare part compatibility and availability for more than 20 years.

MASTERYS BC+ 208V

Designed for easy integration and use
from 10 to 60kVA

Advantages

A flexible and cost-effective solution

- A compact range of standard product references with a variety of add-on options to adapt to every customer's site.
- Easy to configure for retrofit in existing installations.
- Equipped with either 1 switch or 4 switches for input, output, batteries and bypass mode.

Long back-up time engineered-in

- Several optimised choices for standard internal battery configuration.
- Increased internal battery sensity for reduced footprint and simplified installation.
- Internal basic runtime available up 30 kVA, without additional external battery cabinet.

Embedded digital technology

- Digital Native UPS generation.
- IoT ready device for access to connected services.

Fast and easy installation

- A wide range of UPS from 10 to 60 kVA with the same performance and functionality.
- Quick UPS installation.
- Quickly get online product documentation.

Fast delivery

- North-American stock available for urgent projects or last minute requirements.
- Fast delivery even for customized configurations thanks to easily combined options.

User and environmentally friendly

- 5 languages available in the mimic panel.
- Ergonomics designed to simplify usage.
- Units provided with wheels for easy positioning.

The solution for

- > SME IT networking / computer rooms
- > Banks
- > E-Medical
- > Medical Services
- > Telecom & media infrastructure
- > Transport
- > Control rooms

Certifications

- > UL 1778 5th Edition
- > CSA 22.2 107.3 -05

- > UL 60950-11
- > IEC 62040-1

Advantages

* 40-60kVA

Certifications

We offer services to ensure your UPS highest availability:

- > Commissioning
- > On-site intervention
- > Preventive maintenance visits
- > 24-hour call out and rapid on-site repairs
- > Maintenance packages
- > Training

System features

- Dual input mains
- Internal maintenance bypass switch
- Output switch breaker
- Auxiliary mains switch breaker
- Backfeed protection: detection circuit
- Full compatibility with generators
- Internal long-life batteries up to 30 kVA

Standard communication features

- 5" multilanguage touch screen graphic display
- Serial port RS232
- USB port
- Dry contacts
- Remote Emergency Power Off
- Programmable opto-isolated contacts
- 2 slots for communication options
- Parallel ports (40-60kVA – Cable not included)

System options

- 1 or 4 switches system
- Paralleling kits
- External battery cabinets
- External wrap around bypass
- Temperature sensor for battery cabinet

Communication options

- UTP Ethernet connection - slot-in card
SNMP V3
- 3 input, 8 programmable output card (for
10-30kVA)
- Provides 230V relay contacts + ESD port
- MODBUS / TCP
- BACNET / IP

STATYS Integrable

Integrable STS chassis made for Easy and Seamless cabinet integration from 200 A to 1200 A

Function

STATYS Integrable is a fully integrated Static Transfer Power Unit for integration into a cabinet or a power distribution unit (PDU).

Supplied by two independent sources, STATYS Integrable increases the overall electrical infrastructure availability during abnormal events and programmed maintenance.

Advantages

Easy integration

- Pre-engineered mechanical and electrical connections for ease of integration into cabinets or PDUs.
- Installed simply by one operator with no special tools required.
- STATYS Integrable is operated by any HMI via a single connection bus using Modbus protocol.

Unparalleled serviceability

- During preventative maintenance the STATYS Integrable remains fully operational and the load is kept protected.
- STATYS Integrable can be easily integrated or swapped with a new one, without the need of kept specific tools.

Best resiliency

- Full redundant internal design ensuring no single point of failure.
- Internal segregation between critical functions to prevent a fault propagation.
- Load protection ensured even during an internal fault.

Robust design

- Compatible with all types of electrical infrastructure and applications.
- Fully rated SCR ensures no restriction to the continuation of operation.

The solution for

- > Integration in switchboard and PDU
- > Data center
- > Finance, banking and insurance
- > Healthcare sector
- > Telecom & Broadcasting
- > Industry
- > Power generation plants
- > Transport

Advantages

Conformity to standard

- > UL 1008 S recognized File number: E513909
- > IEC 62310-2 (EMC Immunity & Emission)

High reliability - Internal redundant design

Main features:

- Triple redundant power supplies.
- Full redundant DC power bus.
- Redundant microcontroller.
- Redundant SCR drivers.
- Cooling redundancy up to 104 °F/ 40 °C .
- Equipped with an “auto-hold” feature to ensure load continuity in case of internal failure.
- Real-time SCR fault sensing.
- Separation of main functions to prevent internal fault propagation.
- Robust internal field communication bus.
- Internal monitoring of sensors to ensure maximum system reliability.

Hot maintainability

- Fully functional STATYS Integrable during preventive maintenance.
- Hot replacement of the power supplies.
- Hot replacement of fans with no derating.
- Cold swap of the entire STATYS Integrable power unit.

Standard features

- A smart and flexible transfer system that can be configured according to the type of load.
- Synchronized and non-synchronized sources compatibility (configurable synchronization tolerance and switching management).
- Output fault current sensing.
- Full breaker management.
- ATSM (Advanced Transformer Switching Management).
- Available in switched and non-switched neutral.

Standard communication features

- Dry-contact interface (configurable voltage-free contacts).
- Ethernet interface for STATYS Integrable monitoring via WEB pages.
- MODBUS TCP.
- Full digital configuration and setting.
- Single point access for manufacturer HMI.

Communication options

- Additional dry-contact interface. (configurable voltage-free contacts).
- MODBUS RTU RS485.

SUNSYS HES L[©]

Modular outdoor energy storage system

from 50 kVA / 203 kWh to 550 kVA / 1218 kWh

SUNSYS-HES-L-EO-ENG

Function

SUNSYS HES L is a modular outdoor energy storage system designed for both on-grid and off-grid applications. It is available in a variety of configurations, to provide the ideal system size for a range of project requirements.

It supports dedicated applications such as optimization of photovoltaics with self consumption, peak shaving, backup power, and EV charging infrastructure support.

SUNSYS HES L combines the economic returns of on-grid operation with the security of a microgrid when the grid may fail.

Advantages

High safety standards

SUNSYS HES L integrates advanced power conversion and LFP battery technologies to create a winning formula.

The B-Cab L (Battery Cabinet) uses liquidcooled thermal management, with an integrated fire safety system, and meets the requirements of the latest international fire code.

The complete system is certified to the latest UL 9540, the safety standard for energy storage systems in both the Canada and the USA.

Extreme modularity

SUNSYS HES L is a modular energy storage system that uses 2 standard cabinets to enable 29 UL certified configurations, providing ideal system sizing for a variety of projects.

- C-Cab L: Converter Cabinet from 50 to 300 kVA per Cabinet.
- B-Cab L: Battery Cabinet of 203 kWh.

2 C-Cabs L can be stacked in parallel with up to 6 B-Cabs L reaching a maximum configuration of 550 kVA / 1218 kWh.

Standard configurations simplify the design, quotation, installation and commissioning process of your projects.

Fully bankable historical supplier

Socomec is a 100+ years old company with expert knowledge in power conversion, switching and monitoring.

With our energy storage experience of 10+ years and 420+ systems installed worldwide, we have proven our knowledge and support process on the field.

Integrated ready-to-use certified system

SUNSYS HES L systems, including inverter, batteries and control components, are fully integrated, tested and certified.

Our systems have undergone a typetesting procedure to guarantee reliable behavior and performance, reducing the time and effort required for commissioning. Specially adapted software for internal communication between all cabinets has been developed allowing efficient monitoring and control of the system, called PMS. Going a step further, we enabled thanks to SunSpec standard an easy integration with external EMS if you require it.

Whether you have a switchboard, solar system, generators or other equipment on site, our systems are designed to be compatible with a wide range of existing installations.

The solution for

- > Commercial and industrial buildings
- > EV charging infrastructure
- > Isolated microgrids
- > Resilient microgrids
- > Renewable energy integration

Strong Points

- > High safety standards
- > Extreme modularity
- > Fully bankable historical supplier
- > Integrated ready to use certified system

Conformity to standards

Remote Monitoring & Debugging

Local management

The Socomec Power Management System, coordinating the operation of all converter and battery components. It's capabilities include: This open platform, integrated in the C-Cab, provides access to:

- Peak shaving, energy shifting, self-consumption and fuel saving to maximise valuable savings,
- Transitions between on-grid and microgrid operation,
- Autonomous microgrid management,
- Compatibility with 3rd party energy management software suites, through a Sunspec 2.0 or Modbus interface,
- SCADA integration through Modbus/TCP.

Remote monitoring

In addition, the C-Cab L also integrates IoT devices that make it possible to continuously monitor the system remotely.

These devices enable the following, through 2 offers SoLive and SoLive Pro:

- Web dashboard for on-line monitoring,
- Web access to the system KPIs,
- Smartphone app,
- Remote firmware upgrade.

SUNSYS HES XXL[®]

High power energy storage system

from 0.5 MVA / 1.6 MWh to 6 MVA / 24 MWh

SUNSYS HES XXL

Function

SUNSYS HES XXL is an outdoor high power energy storage system designed for both on-grid and off-grid applications. It is available in a variety of configurations, to provide the ideal system size for a range of project requirements. It supports dedicated applications such as optimization of photovoltaics with self consumption, peak shaving, backup power, and EV charging infrastructure support. SUNSYS HES XXL combines the economic returns of on-grid operation with the security of a microgrid when the grid may fail.

It is perfectly adapted to large scale commercial and industrial installations as well as front of the meter projects.

Advantages

High safety

SUNSYS HES XXL integrates advanced power conversion and LFP battery technologies to create a winning formula. The B-Cab XXL (Battery Cabinet) uses liquid-cooled thermal management, with an integrated fire safety system, and meets the requirements of the latest international fire code.

The complete system is certified to the latest UL 9540, the safety standard for energy storage systems in both Canada and the USA.

Extreme scalability

Large variety of system configurations are available based on three standard cabinets:

- C-Cab XXL: Converter Cabinet from 0.5 to 1.5 MVA
- B-Cab XXL: Battery Cabinet of 407kWh
- M-Cab XXL: Master Control Cabinet embedding smart components

While putting up to 4 systems in parallel it is possible to reach 6 MVA / 24 MWh.

Fully bankable supplier

Socomec is a 100+ years old company with expert knowledge in power conversion, switching and monitoring.

With our energy storage experience of 10+ years and 420+ systems installed worldwide, we have proven our knowledge and support process on the field.

This open platform, integrated in the M-Cab XXL, provides access to:

- Peak shaving, energy shifting, self-consumption and fuel saving to maximise valuable savings,
- Transitions between on-grid and microgrid operation,
- Autonomous microgrid management,
- Compatibility with 3rd party energy management software suites, through a Sunspec 2.0 or Modbus interface,
- SCADA integration through Modbus/TCP.

Remote monitoring

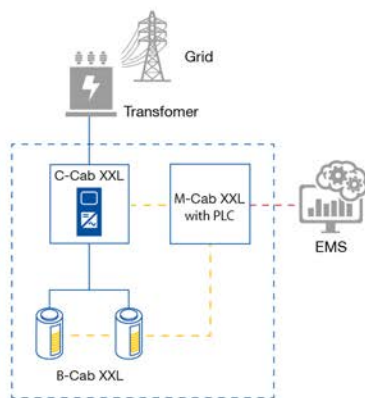

In addition, the M-Cab XXL also integrates IoT devices that make it possible to continuously monitor the system remotely.

These devices enable the following, through 2 offers SoLive and SoLive Pro:

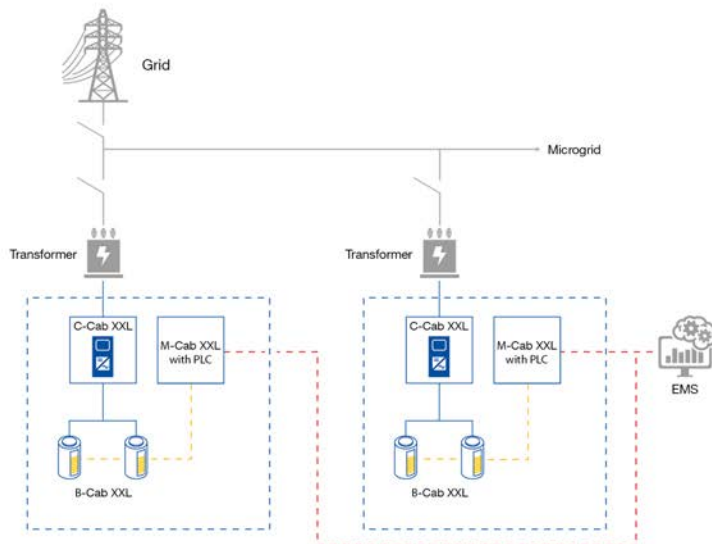

- Web dashboard for on-line monitoring,
- Web access to the system KPIs,
- Smartphone app,
- Remote firmware upgrade.

Technical Data

System information

Power modularity	0.5 MVA & 1 MVA & 1.25 MVA @ 600 Vac or 1.5 MVA @ 690 Vac per C-Cab XXL
Chemistry	LFP - Lithium Iron Phosphate
Energy Nameplate	407.3 kWh per cabinet
AC/AC Max Round Trip Efficiency	higher than 90%*
Maximum P-rate	0.5 P
AC connections	3-wire (3P3W) 16 x 600 kcmil or 6 x 300 mm ²
AC Voltage range	600-690 VRMS +/-10%
Rated frequency	50 & 60 Hz configurable
Fire protection	fire safety system including smoke detectors, heat detectors, aerosol, dry pipe and deflagration venting panel

Environment

Environment installation	Outdoor
Degree of protection	IP 55
Operation temperature	-20 to 45 C° -4 to +113°F without derating
Acoustic level at 3 m	< 75 dBA @ 3m
Altitude max.	1,000 m / 3,280 ft without derating (above 1,000 m / 3,280 ft, 10% per 1,000 m / 3,280 ft)

*Energy consumption of the auxiliaries is not taken into account

Commissioning

Three-phase Uninterruptible Power Supply (UPS)

The commissioning of a UPS covers start-up of the equipment, verification of its functions according to its design specifications, and to ensure that it is compatible with the customer's working environment.

Socomec performs the commissioning service within a quality process standard by ensuring that your equipment will be delivered in a safe, reliable and operational condition.

COMMISSIONING DATE (UPS)	_____
COMMISSIONING DATE (Battery)	_____
VALIDITY OF THE CERTIFICATE (check renewal)	_____

SOCOMECC (www.socomec.com) declares the system has been checked and certified for high quality and availability supply and reserves the right to limit the responsibility in case the start up and the maintenance is not performed by authorised personnel*. The present certificate should be renewed on yearly basis.

* Personnel is authorised only if trained by the manufacturer and enabled by a certificate released by the manufacturer. Only authorised personnel can insure Competence, Original spare parts, global diagnostic through appropriate tools, Update of the unit according to new releases.

Key points

- > Work environment inspection
- > Electrical installation check (isolator switch, cabling, circuit breakers etc.)
- > UPS internal and external check
- > System power on and set up
- > Operating test on single UPS and/or parallel system
- > Load bank test (on request)

Benefits

- > Compliance with the various installation standards
- > Completes the Factory Acceptance Test
- > Commissioning traceability
- > Conformity certificate

Commissioning

for STATYS Static Transfer System (STS)

The commissioning of an STS covers start-up of the equipment, verification of its functions according to its design specifications, and to ensure that it is compatible with the customer's working environment.

SOCOMEc performs the commissioning service within a quality process standard by ensuring that your equipment will be delivered in a safe, reliable and operational condition.

Key points

- > Work environment inspection
- > Electrical installation check
- > STS internal and external check
- > System power on and set up
- > Ventilation check
- > Operating test

Benefits

- > Commissioning performed in compliance with applicable quality and safety standards
- > Compatibility with your work environment
- > Compliance with the various installation standards
- > Conformity certificate

Maintenance contracts

Three-phase UPS

Our service contracts are tailored to customer needs, taking into account individual operational constraints, business processes and the unique level of criticality associated with specific applications. Whatever the issue, our internal escalation process from local specialist support teams up to corporate R&D and expert engineering teams, gives us access to different levels of expertise to respond as quickly as possible. Our service teams are trained and equipped with certified equipment to provide the highest levels of expertise.

Key points

- > Original spare parts
- > Expert engineers equipped with professional tools and software
- > Safety procedures
- > Access to different levels of expertise in order to respond as quickly as possible
- > Native cyber-secure cloud services

SERVICE DESCRIPTION	SILVER	GOLD	PLATINUM
Annual preventive maintenance visit ⁽¹⁾	•	•	•
Hotline 8x5 + response to site by next working day	•	•	•
Hotline 24x7 + response to site in 6 hours	○	○	○
Labour from Socomec specialist (onsite & remote)		•	•
Original spare parts			•
Ready-to-use spare power brick/module onsite	○	○	○
Native cyber-secure cloud services ⁽²⁾			•
<ul style="list-style-type: none"> • SoLive monitoring application • Remote cloud surveillance 24x7 • Access to log interactive web dashboard • Annual Health Check report • Proactive alarm management • Remote response and diagnosis within 2 hours • Remote troubleshooting⁽³⁾ 	•	•	•

•: included.

○: optional.

⁽¹⁾ Remote preventive visits are possible with certain UPS models. Contact us for more information.

⁽²⁾ Available for UPS equipped with a Net Vision network card and connected to Socomec's cloud.

⁽³⁾ Upon end-user confirmation, a Socomec specialist will be available to activate a direct-to-machine temporary remote connection in order to perform an in-depth diagnosis and carry out troubleshooting where possible. This service is available for certain UPS models. Contact us for more information.

Benefits

- > Minimum downtime and extended lifespan
- > Maximum peace of mind
- > Precise budget control

Maintenance contracts

for STATYS Static Transfer System (STS)

Silver, Gold, Platinum and Platinum+ are the Maintenance service contracts suitable for standard STS.

50+ years of manufacturer's experience is at your disposal to provide you with a comprehensive support package which affords you complete peace of mind.

SERVICE DESCRIPTION	SILVER	GOLD	PLATINUM
1 Annual preventive maintenance visit	•	•	•
Labour & Mileage for corrective maintenance		•	•
Original spare parts			•
Hot-line availability	•	•	•
Emergency hot-line 24/7	○	○	○
Response time to site within next working day	•	•	•
Response time to site within 6h*	○	○	○
Response time to site within 4h*	○	○	○
Preventive replacement of consumables (fans and capacitors)	○	○	○
Additional preventive maintenance visit	○	○	○
Out of hours preventive maintenance visit during night, week-end, bank holidays	○	○	○
Thermal imaging	○	○	○

•: included.

○: optional.

* Please check the service coverage in your area.

Key points

- > Original spare parts
- > Expert engineers equipped with professional tools and software
- > Safety procedures

Benefits

- > Improves system availability
- > Optimises product lifespan
- > On-site interventions guaranteed

Optional services for maintenance contract

Preventative maintenance visit

The service life of equipment depends on the operating environment (temperature, humidity, dust). To keep equipment running at maximum levels of efficiency and to avoid system downtime with possible risks and damage to loads, it is important to have the manufacturer's expertise to perform regular preventive maintenance.

This is the best way to ensure the reliability of your equipment over time and the most cost-effective solution to keep the Total Cost of Ownership under control.

Key points

- > Inspections: mechanical, electrical, battery
- > Dust removal / equipment cleaning
- > Software updates
- > Electronics testing
- > Environmental checks
- > Battery check*
- > Communication test
- > Maintenance report

**Only for UPS.*

Benefits

- > Helps reduce equipment malfunction
- > Optimises operating efficiency
- > Extends equipment lifetime
- > Improves system availability

Optional services for maintenance contract

Emergency services 24/7

shutterstock.com

The response time to site is vital for business continuity; limiting as much as possible any downtime, in order to avoid any risk of severe system anomaly.

It is, therefore, essential to have the expertise of a maintenance service provider who fully understands your equipment, knows your working environment and who can respond to emergencies within a time guaranteed by a bespoke Service Level Agreement (SLA).

Proximity and emergency service carried out by the manufacturer are the best guarantees for fast troubleshooting and real problem solving.

Key points

- > Specialist team of engineers on call 24/7
- > Technical expertise on-site within 4 hours* guaranteed
- > Remote monitoring and proactive troubleshooting with SoLink
- > 24/7 original spare part stock availability with high priority shipment

** Please check the service coverage in your area.*

Benefits

- > High quality technical support
- > Fast and precise diagnostic
- > Real problem solving

Optional services for maintenance contract

SoLink - Socomec experts 24/7 UPS remote monitoring

SoLink is one of the services included in a Socomec Maintenance Contract. When the application is critical, you can be assured of immediate and expert attention via SoLink. SoLink will automatically identify the anomaly and notify the nearest Socomec Service Center when the UPS' operating parameters fall outside the permitted range - providing you with a permanent and direct connection to Socomec's expert technical team.

Restore your systems in record time

Proactive alarm clock: When your UPS alarm is activated, SoLink will instantly notify the nearest Socomec Service Center. The supervisor technician will carry out an initial check-up by accessing the UPS dashboard on the cloud platform.

Remote troubleshooting: In the event that more in-depth analysis is required, a Socomec expert engineer will connect to your UPS through remote access in order to run tests and diagnostic tasks directly on your machine, in complete security.

First-time-fix intervention: In the event that on-site intervention is required a Socomec on-call engineer will be dispatched immediately with a full brief from the Socomec Service Center, along with any spare parts that may be needed.

Improve future performance

Periodic reporting: Socomec experts will provide you a periodic UPS health-check report with event statistics, trend analysis and technical recommendations to improve overall system availability.

Interactive web dashboard: The IoT cloud-connectivity allows you access to an intuitive, interactive dashboard that gives a view of the equipment's historical data and performance trends.

SoLive App: Remote UPS monitoring from a smartphone - anytime, anywhere. With real-time alarm notifications and detailed status updates for each UPS, it's not possible to manage unexpected events and develop a real insight into the operating environment.

Key points

- > Effective: if an anomaly occurs, MTTR is drastically reduced
- > Secure: data is hosted on Socomec-owned cloud infrastructure, Cyber security is certified by a third-party company
- > Affordable: proposed as an optional extra on the Maintenance Contract at an attractive price

Benefits

- > Prevents problems from occurring
- > Increases system availability
- > Saves downtime costs

Optional services for maintenance contract

SoLink - Socomec experts 24/7 UPS remote monitoring

Provide a unique user experience

Remote trouble shooting

Initiate problem solving in complete security

The Socomec technician is available upon request - and in collaboration with the end-user - to remotely access the UPS. This means that diagnostic tasks can be conducted in a more precise way and problem solving interventions can be initiated, as if in front of the machine.

Direct expert access to your UPS.
Root cause analysis - with no downtime
Issue detection in real-time.
Remote tasks can be run within cyper security products.

Interactive web dashboard

Historical UPS data is just a click away

Verifying your UPS performance is now an innovatedigital experience with the new SoLink interactive web dashboard.

Visualise the data history for the main operating parameters.
Select your period (hour/day/week/month/year).
Choose the sampling frequency of the measurement.
Zoom in on the graph to see the detail.

SoLive UPS

Live UPS data always in hand

While SoLink is supported by experts ready to intervene on your behalf, you can access information about the status of your UPS directly from your smartphone with SoLive UPS!

Data provided:
current UPS status,
battery level,
battery back-up time (minutes),
UPS operating temperature

Download SoLive UPS app:

Optional services for maintenance contract

Remote troubleshooting problem solving securely and instantly

As soon as a problem occurs, Socomec's expert engineers are available upon request - and in collaboration with the end-user - to conduct diagnostics and root cause analysis, restoring the system in record time. The engineer connects to the UPS through remote access in order to run tests and diagnostic tasks directly on the machine - in complete security.

Problem solving interventions can be carried out with the same efficiency as if in front of the equipment.

Fast intervention

- Easy scheduling activity.
- Direct remote access to the UPS in order to solve issues at distance.

Access to the best experts

- These fuses offer increased reliability, ensuring consistent performance over time. Their silver-based composition protects them from premature ageing, making them perfectly suited to the cyclic operations characteristic of energy storage application.

Real-time issue analysis

- Remote diagnostics and tests are as effective as if in front of the UPS.
- Fast root cause analysis

Reduced costs and carbon impact

- Time saving.
- More cost effective and eco friendly than on-site intervention

Contact us to find out which UPS ranges and models are compatible with this service.

Key points

- > Direct access to UPS
- > Immediate response time
- > Same level of service as with on-site intervention
- > Issue analysis in real time
- > On-demand encrypted connection
- > Cyber security audit by certified independent organisation
- > Available under maintenance contract

Optional services for maintenance contract

Consumables replacement

appx_1005.eps

The components of each equipment are designed to operate reliably during the product's normal lifecycle, in the electrical environments and environmental conditions stated in the installation and operating manual.

To reduce the impact of ageing on your system, which could affect the efficiency and availability of the installation, it is vital to carry out the regular preventive replacement of parts subject to wear and tear such as fans and capacitors for UPS, and fans for STS, COSYS and MEDSYS products.

Key points

- > Original spare parts

Benefits

- > Prevents equipment instability and malfunctions
- > Avoids risk of system breakdown
- > Saves downtime costs

Fans and capacitors must be replaced by qualified personnel only. Only Socomec personnel are authorised to make recommendations for any replacement parts.

Optional services for maintenance contract

Battery care ⁽¹⁾

(1) Only for UPS.

Batteries are a key element of UPS systems. Their efficiency and availability are important for preventing load downtime, but at the same time batteries are the most vulnerable and failure-prone component of such systems.

Battery failures are mainly caused by the premature “end of life” of a few battery blocks. A corrupted battery block, if not detected early and not replaced, can accelerate ageing within the rest of the battery string, therefore jeopardizing the integrity of the system.

The level of predictability for failure detection on a battery block depends on the number of measurements, tests and analyses that are performed on every single block.

Main factors for the premature end-of-life of battery blocks:

- High temperatures
- Frequent number of cycles
- Discharge too deep
- Recharging with high voltage
- Lack of regular maintenance

Source: Eurobat

sydfr_2088_a_gp

Key points

- > Impedance test, thermal imaging, temperature, voltage measurement block by block
- > Faulty / weak block detection
- > Back-up time measurement (optional)

Benefits

- > Information on the battery's state of health
- > Estimation of the optimum time for battery replacement
- > Optimization of the battery's useful working life

Battery Care is a brand new set of service packages that complements the standard battery check service (at string level) during the UPS preventive maintenance visit.

The packages will ensure the integrity of your business continuity by performing the highest level of inspection on your battery blocks.

Features:

The Battery Care offering is designed around 3 packages: IMP (IMPedance), TEMP (TEMPerature) and PRIME (the full package).

ACTIONS	WHERE	BATTERY CHECK	BATTERY CARE		
			IMP	TEMP	PRIME
Visual inspection check for leakage and corrosion	string	•	•	•	•
Cleaning	string	•	•	•	•
Measurement with partial discharge of V & I	string	•	•	•	•
Environment temperature check	string	•	•	•	•
Control of floating voltage and max current*	string	•	•	•	•
Impedance test	each block		•		•
Temperature measurement	each block			•	•
Voltage measurement*	each block			•	•
Thermal imaging	each block				•
Torque setting	each block				•
Back-up time measurement**	string		○	○	○

•: inclusive.

○: optional.

* during battery charge. **: by performing the end of discharge voltage test.

Depending on the package chosen (IMP, TEMP, PRIME), a set of accurate measurements, tests and analyses will be performed on each single block across all battery strings by Socomec trained engineers.

An in-depth report will provide information about:

- the health of each single battery string / block,
- the faulty blocks that need to be replaced,
- the real "back-up time" of the battery system (optional).

svc 007 en gb

Do you know your real back-up time ?

- > For various external factors, your real back-up time could be much less than the one declared by the battery manufacturer.
- > Thanks to a specific set of measurements and analyses, Socomec can provide you with the exact back-up time of your battery system.

Optional services for maintenance contract

Battery replacement ⁽¹⁾

(1) Only for UPS.

The majority of batteries used in UPS applications (VRLA - Valve Regulated Lead Acid) normally have a calendar life of 5-10 years, depending on the local operating conditions. The calendar life is the actual time span from the date of installation until the end of life, when battery capacity drops below 80% of its rating. VRLA batteries that are well maintained and installed in a properly conditioned environment, typically have a service life of 70% to 80% of their calendar life. This explains why the UPS back-up time could differ from the one declared by the battery manufacturer.

For the integrity of business continuity, it is essential to know the estimated end-of life of the battery system and to be correctly advised concerning the best time for its replacement.

The expertise of the UPS manufacturer is the best guarantee for carrying out any battery replacement operations. An expert that understands your equipment and how it is integrated into your unique working environment and who can respond effectively to any anomaly should any occur.

Key points

- > Checking and recalibration of battery charger setting
- > Fully secure battery discharge test
- > Battery disposal according to local regulations

Benefits

- > Prevents unexpected early shutdown of the UPS
- > Saves downtime costs
- > Advice for the optimisation of the battery back-up time

The battery is a critical component of the UPS system: according to a study by the Ponemon Institute, 65 % of Uninterruptible Power Supply (UPS) system failures are due to batteries. The reliability and availability of these components are vital to ensuring the energy supply to the load.

In the case of a failure, the economic impact of an outage can dramatically increase to hundreds of thousands of euros for the UPS owner.

Within the UPS system, the battery represents the weakest and least sophisticated component, while its cost represents an important part of the investment. It is therefore crucial to reduce the number of maintenance operations, maximise the battery's return on investment and anticipate battery malfunctions.

This can be implemented by following the rules described in the IEEE standard 1188 (IEEE Recommended Practice for Maintenance, Testing and Replacement of Valve-Regulated Lead-Acid (VRLA) Batteries for Stationary Applications), whilst a more accurate preventive maintenance program can be carried out using a BMS (Battery Monitoring System) which provides all the parameters of the individual battery blocks, continuously checks the battery's efficiency and identifies anomalies in advance.

Main reasons for battery block failures

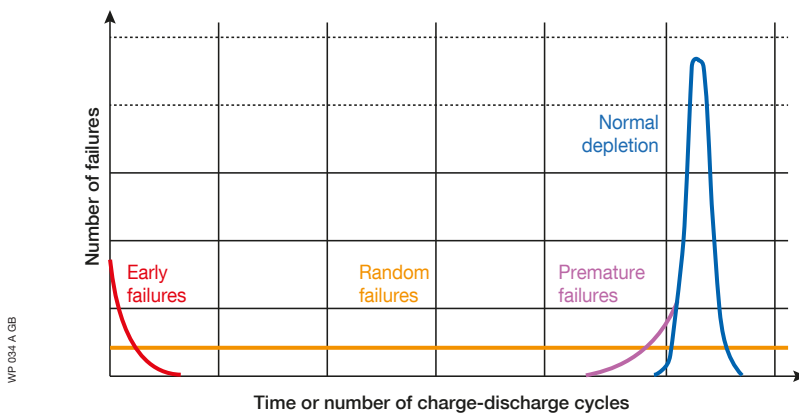

For a battery operating in real life conditions, there are 4 types of failures which can create a defective block:

1. Early failures, which are mainly due to defects introduced during the manufacturing process. They generally appear during the first discharge cycle.
2. Random failures, which can appear at any time during the life of the battery.
3. Premature failures.
4. End-of-life failures, both of which are due to latent defects or environmental conditions, such as a high ambient temperature, which can shorten the battery's operational life time. If this type of failure appears, it means that the health of the battery string is seriously compromised and the battery cannot be relied upon for autonomy.

What is a battery ?

A battery is made up of a collection of:

- > blocks (typically 12 VDC), which can be assembled in series to form a string,
- > several identical strings, which can be assembled in parallel to form a battery.

Block failures description.

Customer training

Certified manufacturer's training programme for UPS and STS

Socomec specialists can help you gain the necessary skills to operate your equipment efficiently and to increase its availability.

Socomec technical training courses can take place either at your site or in Socomec's dedicated training centre.

Available on MASTERYS, MODULYS, DELPHYS, STATYS and communication products.

Key points

- > Practical training
- > Either in Socomec factories or at customer's site
- > Open discussions and participants' feedback
- > Many types of configurations covered
- > Real-case simulations based on customer's actual installation
- > Experienced 'field-tested' trainers

Benefits

- > Helps you to really know your equipment
- > Real "hands-on" practice on your UPS
- > Understand the alarms

Maintenance and inspection contracts

A broad range of solutions to suit all your needs

The Maintenance service contracts are entirely tailored around customers' needs, taking into account individual operating constraints, business activity and the unique level of criticality associated with specific applications.

A variety of contracts suitable for users have been developed to cover all needs: from a simple combined service, to a fully-inclusive package that includes the cost of labour and spare parts and delivers the quickest response time to site.

Key points

- > An annual inspection visit by a Socomec engineer certifying that the ATyS switch is functioning correctly
- > A detailed inspection report provided after each inspection
- > A list of every asset tested and detail of the inspection work carried out
- > Highlight any issues found

Benefits

- > High power availability guaranteed and performance optimised
- > Reduced risk of potential faults going undetected
- > Costly downtime and the risk of operating losses are cut

Single services

Inspection visit for ATyS Automatic Transfer Switch

A routine inspection of the transfer switches by qualified personnel is required to meet the requirements of insurance companies and to ensure the optimal operation of critical applications.

The inspection visit for ATyS comprises a site visit by a qualified Socomec engineer, which certifies that each transfer switch is functioning correctly.

After each inspection and testing procedure the engineer will provide a detailed report and declaration of conformity.

Key points

- > Manufacturer seal of approval
- > Latest firmware updates
- > Complete report including technical recommendations
- > Declaration of conformity

Benefits

- > Guaranteed high power availability and optimum performance
- > Reduced risk of potential faults going undetected
- > Avoids costly downtime and operating losses

- > Introduction to H80 gateways and the WEBVIEW-L software
- > Creating and managing data profiles
- > Configuring Modbus-communication devices
- > Configuring the Datalogger feature
- > Creating hierarchies and PhotoView pages
- > Software configuration
- > Practical exercises based on your configuration

Benefits

- > Independently set up and use the energy data from your power monitoring architecture

Services for Energy Storage Systems

Preventative maintenance

Energy storage system SUNSYS HES L *p. 428*

Extended warranty

Energy storage system SUNSYS HES L *p. 430*

SoLive PRO

Energy storage system SUNSYS HES L *p. 432*

Preventive maintenance

for energy storage systems SUNSYS HES L and SUNSYS HES XXL

Preventive maintenance is vital in order to ensure that your energy storage system is operating at peak efficiency. If you subscribe to an extended warranty for your system a preventive maintenance contract is mandatory.

Adapted to your budget

- We offer several options that may or may not be selected when subscribing to the service.
See options detailed on the next page.

Optimization tips

- When our experts share the preventive maintenance report with you, they also provide advice in order to help you improve the use of your system and its operating environment.

Autonomy - a la carte -

- Depending on your desire and your skills, we can empower you by providing training in specific maintenance operations so that you can carry out some activities yourself.

Speed of intervention

- If you want a turnkey solution, our experts take care of everything. They take care of preventive maintenance from its planning to its completion in order to guarantee the reliability of your system, to maximize its lifespan and to limit corrective operations.

A solution for

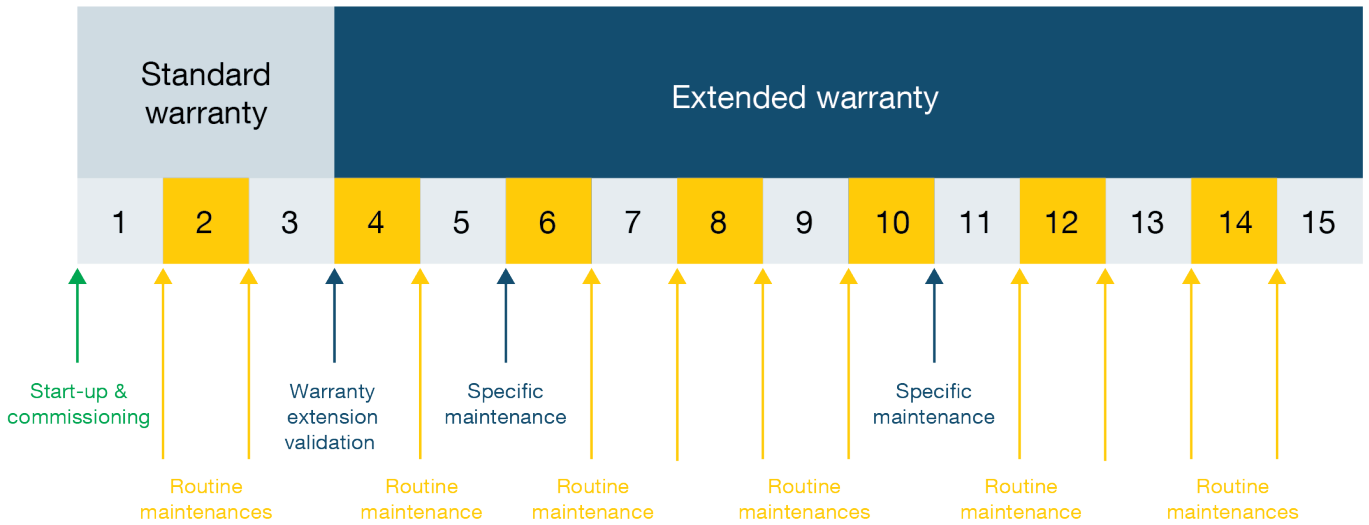

- > Commercial and industrial buildings
- > Electric vehicle charging stations
- > Isolated microgrids
- > Resilient microgrids

Key points

- > Several options available to adapt the offer to your budget
- > Personalized support from our experts according to the desired level of
- > Tips to improve your performance

Preventive maintenance

for energy storage systems SUNSYS HES L and SUNSYS HES XXL

Preventive maintenance - optimizing the lifespan of your system!

To guarantee optimal system operation, periodic maintenance by an expert is essential. This is the best way to ensure the reliability of your system over its lifetime.

2 modular offers are available:

- **DIY partner package:** an offer favoring cost reduction but also requiring input from you.
- **Complete Socomec package:** a complete offer for your peace of mind, where we take care of everything.

	DIY PARTNER PACKAGE	COMPLETE SOCOMEK PACKAGE
Routine maintenance visits carried out by Socomec		Included
Specific maintenance visits carried out by Socomec	Included	Included
Preventive maintenance visit report with recommendations	During specific maintenance visits	Included
Labor included	During specific maintenance visits	Included
Parts for specific and routine maintenance operations	Option	Option
Training in routine maintenance operations	Included	
Software update	During specific maintenance visits	Included

Extended warranty

for energy storage systems SUNSYS HES L and SUNSYS HES XXL

Warranty extensions are available to provide a total warranty of up to 20 years for your battery or the complete storage system, depending on your needs. They include the corrective maintenance of your covered items (parts included) as well as a follow-up of your requirements.

Full coverage of your system

Benefit from an extended manufacturer's warranty of up to 20 years, depending on your needs.

Controlled budget

You know the price of the warranty extension from the outset and, with just one payment, you can therefore avoid unforeseen costs.

Battery performance warranty

The warranty extension includes a performance warranty on the battery. This is the warranty of a DC residual energy level depending on the battery use.

Speed of intervention

In the event of a breakdown, our experts provide you with a rapid response: within 1 day for initial telephone support and within 1 week for an on-site visit, if this is required.

A solution for

- > Commercial and industrial buildings
- > Electric vehicle charging stations
- > Isolated microgrids
- > Resilient microgrids

Key points

- > Full coverage of your system
- > Battery performance warranty
- > Controlled budget
- > Speed of intervention

What does the extended warranty cover?

- Corrective maintenance of the complete system or just of the battery, depending on the chosen warranty, (repair or replacement of defective parts), including parts replaced, the labour on site as well as travel and accommodation costs⁽¹⁾.
- Battery performance warranty.
- Assistance from our team of experts in the event of a problem, with a quick response.

What are the qualifying criteria?

- A preventive maintenance contract must be subscribed.
- Equipment must be permanently connected to the Internet, enabling access to battery data history.
- Socomec must be able to retrieve all data coming from battery at any time.
- Socomec can store all battery data on a secure cloud network on behalf of the customer.
- If the customer prefers to store the battery data himself, the customer assumes all responsibility. In the event of a problem with battery data storage managed by the customer, Socomec reserves the right to cancel the extended warranty.

A warranty adapted to your needs

To offer you greater flexibility with your warranty, we offer various options:

- Extended warranty applicable to the complete system,
- Extended warranty applicable to the batteries only,
- Warranty extension up to 20 years.

SoLive PRO

Real-time system data processing and visualization in the cloud

SoLive PRO makes it easy and secure to visualise real-time data from your SUNSYS energy storage systems, across any of your sites:

- visualise your data via predefined or customised dashboards,
- enhance the performance and sustainability of your energy storage equipment.

Real-time advanced data visualisation

Access relevant and precise data from your Socomec equipment, available via ModBus TCP and Modbus RTU protocols, through practical dashboards.

- Detailed alarm notifications via push email messaging with personalised thresholds according to your needs.
- Live notifications of status changes.
- Historic data logs.
- Equipment locations.

Certified security

Your sensitive data is protected and stored on an ISO27001 certified sovereign French cloud ensuring:

- compliance with specific regulations regarding data protection and security,
- maximum protection against unauthorised access by foreign entities,
- guaranteed data confidentiality.

Customised* dashboards reports

User-friendly and easy to read, access your data via standard or customised dashboards:

- define your own KPIs with our responsive web application,
- set personal thresholds,
- enable multi-account functionalities and allow users to define their preferences and settings.

As well as enhancing your user experience, SoLive PRO provides unparalleled flexibility when monitoring and managing your electrical installations.

* To learn more about customisable dashboard options from Socomec, please contact the Service team.

A solution for

- > Detailed visualisation of all equipment data from different sites, integrated in one location for easy and secure access anywhere, anytime.
- > Centralised synoptic view of key information such as SOC, temperature and alarms.
- > Straightforward and reliable real-time access to your equipment's performance data and historic logs.
- > Data highly secured.

Power testing & certification

Tesla Lab

Tesla Lab - Power Testing and Certification is an independent laboratory specialized in testing of LV switchgears, components and switchgear assemblies.

Thanks to a wide range of equipment and experience in electrical, mechanical, climatic and functional tests for low voltage operating, control, safety and measuring equipment, Tesla Lab can relieve you of all the administrative steps involved in a large number of certification procedures.

It will take care of the contacts with the certification bodies as well as monitoring the procedure through to the obtaining of the certificate.

Tesla Lab is accredited by

and regularly works in partnership with the international certification bodies: KEMA, CEBEC, UL, CSA, ASTA, Lloyd's Register of Shipping, Bureau Veritas, BBJ-SEP, EZU, GOST-R, ...

Key points

- > Several categories of tests: short-circuit tests, verification of temperature rise, overload of endurance tests
- > Several standards covered: IEC, EN, UL, CSA

Benefits

- > No need to have multiple contacts to test your products for compliance in multiple markets

Tesla Lab: Your passport to success
